DECISIONS IN PATENT AND TRADE-MARK CASES, September 7, 14, 21, 28	5, 293, —, 811
TRADE-MARKS:	
Published, September 7, 14, 21, 28	33, 305, 565, 823
Registrations Granted, September 7, 14, 21, 28	73, 341, 605, 858
Registrations Renewed, September 7, 14, 21, 28	79, 357, 617, 867
Registrations Canceled, September 7, 14, 21, 28	84, —, —, —
Registrations Amended, Surrendered, Disclaimed, Corrected, Etc., September 7, 14, 21, 28	84, 361, 622, 872
Registrations, New Certificates, September 7, 14, 21, 28	—, —, —, 873
Registrations Republished, September 7, 14, 21, 28	85, 361, 622, 873
REISSUES, September 7, 14, 21, 28	139, 409, 673, —
PLANT PATENTS, September 7, 14, 21, 28	—, —, 674, —
PATENTS, September 7, 14, 21, 28	140, 410, 675, 919
DESIGNS, September 7, 14, 21, 28	267, 531, 783, 1030

ANNOUNCEMENTS

	Page
APPLICATIONS—Condition of pending	3, 291, 559, 809
BULLETIN OF DECISIONS ON TRADE-MARKS	817
NOTICES:	
Adverse decisions in interferences	29, 561
Attorneys and agents, Examination for registration, *Rule 17*	28, 301, 561
Cancellation notices	29, 301
Classification Bulletin No. 102 on sale	28
Disclaimers:	
Barkelj, Jean A. H	28
Gignoux, Ralph E	301
McAdam, Harry H	29
Riche, Arthur L	301
Smidth, Leonard	301
Wurth, Walter A	29
Erratum, Error in republication notice of registration No. 304,840	28
Foreign applications, Extension of time for filing, *Public Laws 690 and 220:*	
Australia	561
Philippines	561
Poland, correction	561
International convention for the protection of industrial property	301
Patents, List of adjudicated	29, 301, 561
Priority under R. S. 4887, One year right of	561
Trade-Mark classification, Summary of recent ruling	26
Trade-Mark registrations, Extension of time for renewing:	
Czechoslovakia	301
Trade names, Tentative recordation of	813
Withdrawal or dismissal of appeal	812
PATENT SUITS	25, 300, 812
REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE	30, 302, 562, 814

TABLE OF CASES REPORTED

Designs	95	No. 150,820 to No. 150,914, inclusive
Total	911	

Patents expiring: Patent Numbers 1,821,916 to 1,822,871, inclusive, issued September 8, 1931, expire September 8, 1948

Condition of Applications Under Examination at Close of Business Aug. 20, 1948

Total number of patent applications awaiting action, 155,615. Date of oldest new application, August 13, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewage.	1-30-47	1-23-47	2837
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	1-2-47	8-1-46	3092
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	10-30-47	10-25-47	1470
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Disptach; Store Service; Mining, Quarrying, and Ice Harvesting.	2-26-47	2-8-47	3937
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	12-26-46	8-23-46	1866
6. SURLE, H., Carbon Chemistry (part)	9-11-47	7-14-47	1963
7. HANLIN, GEORGE, Optics; Photographic Apparatus	9-16-47	7-21-47	1716
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	11-12-46	7-9-46	4388
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	3-8-47	11-29-46	2250
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	11-24-47	10-6-47	1746
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	11-20-47	12-22-47	744
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	9-22-47	9-5-46	2139
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	9-20-46	9-3-46	2451
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	11-8-47	9-3-47	1352
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	5-14-47	2-12-47	2095
16. LOVEWELL, N. N., Television; Telephony	10-15-47	6-5-47	1512
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	2-5-47	9-10-46	2102
18. HURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	5-27-47	9-11-46	1979
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	7-19-47	11-7-46	1944
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	2-25-47	11-14-46	2002
21. MADER, R. C., Textiles	9-2-47	8-4-47	1212
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	9-22-47	10-11-46	1731
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	7-17-47	7-24-46	1259
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	8-18-47	8-4-47	2661
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	9-20-47	1-20-47	1781
26. YOUNG, R. R., Electricity—Generation and Motive Power	11-18-46	11-16-46	1328
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	6-4-47	12-4-46	3435
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	6-30-47	7-30-47	1109
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	2-4-47	12-19-46	3181
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	11-25-47	6-24-47	1330
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	12-3-47	11-28-47	2167
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	2-27-47	9-20-46	3193
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	11-29-46	8-28-46	3499
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	12-31-46	8-5-46	1525
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	3-19-47	10-17-46	3267
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	11-4-46	8-8-46	1965
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	10-27-47	2-7-47	1426
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	6-2-47	3-14-47	1928
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	2-19-47	7-27-46	2960
40. DRUMMOND, E. J., Receptacles (part); Packages	10-1-47	10-16-46	3241
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	10-8-46	9-4-46	2367
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	12-11-47	10-11-47	1195
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	11-12-47	9-30-47	1365
44. HARVEY, L. P., Refrigeration; Preserving	8-13-46	7-22-46	1118
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring Weight and Horsepower Motors.	1-25-47	9-23-[illegible]	2933
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	5-17-47	7-19-46	1899

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 155,615. Date of oldest new application, August 13, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	10-24-47	5-10-47	2193
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	11-29-47	2-14-47	1577
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	7-29-47	5-28-47	1545
50. LEVIN, SAMUEL, Synthetic Resins	11-24-47	6-3-47	2232
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	11-26-47	5-3-47	1822
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	8-22-47	11-13-46	3858
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	3-5-47	7-29-46	3704
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	12-1-47	5-3-47	1773
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	6-12-47	5-15-47	1991
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	10-11-47	10-2-47	1074
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	3-17-47	8-2-46	3613
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	12-17-46	10-24-46	2129
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	7-1-47	3-10-47	1968
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	12-12-47	4-25-47	1453
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	11-29-46	6-7-46	3589
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	3-26-47	9-12-46	2005
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	9-8-47	7-3-47	1481
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	1-20-48	1-15-48	1659
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	11-17-47	5-27-47	2048
66. LISANN, L., Geometrical Instruments	3-27-47	4-16-46	2124
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	6-7-47	4-9-47	2090
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	12-18-47	6-20-47	1465
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	6-20-47	10-3-46	1755
DESIGNS: BREHM, G. L.	12-2-46	1-2-48	7907

Total number of trade-mark applications awaiting action (including renewals and republications), 41,466. Date of oldest new application, Aug. 9, 1947; date of oldest amended application, Feb. 9, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	11-15-47	5-3-48	3085
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	9-2-47	3-3-48	5413
3. SUMMERS, G. S., Classes 13, 21, 23, 26	8-9-47	3-22-48	4662
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	9-23-47	2-9-48	4450
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	9-26-47	3-13-48	3404
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	11-7-47	5-28-48	3391
7. KEYS, O. M., Classes 16, 19, 55	9-2-47	12-26-47	2233
8. GEDIMAN, H. W. {Renewals / Republications} All Classes	6-30-48	7-28-48	144
	10-1-47	8-7-48	1684

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abercrombie & Fitch Company, New York, N. Y. Smoking tobacco. Serial No. 530,043, Sept. 7. Class 17.

Acme Electric Corporation, Cuba, N. Y. Voltage regulators and variable voltage transformers. Serial No. 530,890, Sept. 7. Class 21.

Acme Machine & Fabrication Co., Birmingham, Ala. Toy coaster wagons. Serial No. 521,232, Sept. 7. Class 22.

Agkem, Inc., Quincy, Ill. Insecticides. Serial No. 540,760, Sept. 7. Class 6.

Air Reduction Sales Company, New York, N. Y. Flux-coated metallic welding rods. Serial No. 547,304, Sept. 7. Class 14.

Alexander Woolen Co., Chicago, Ill. Woolen piece goods. Serial No. 546,338, Sept. 7. Class 42.

American Chemical Society, Washington, D. C. Books, pamphlets and periodicals. Serial No. 534,725, Sept. 7. Class 38.

American Rolling Mill Company, The, now by change of name Armco Steel Corporation, Middletown, Ohio. Ferrous metal pipe and conduits. Serial No. 527,685, Sept. 7. Class 13.

American Spring Cushion Manufacturing Company: *See*—
Levich, Solomon H.

Amplifier Corp. of America, New York, N. Y. Magnetic sound recording and reproducing apparatus and parts thereof. Serial No. 533,519, Sept. 7. Class 21.

Aristocrat Leather Products, Inc., New York, N. Y. Apparel belts, suspenders, garters, etc. Serial No. 534,974, Sept. 7. Class 39.

Arkansas Company, Inc., Newark, N. J. Assistants useful in dyeing procedures and textile processing. Serial No. 517,954, Sept. 7. Class 6.

Armco Steel Corporation: *See*—
American Rolling Mill Company, The.

Armour and Company, Chicago, Ill. Coating composition. Serial No. 527,869, Sept. 7. Class 6.

Armour and Company, Chicago, Ill. Strings for tennis, badminton and squash rackets. Serial No. 528,415, Sept. 7. Class 22.

Armour and Company, Chicago, Ill. Blood resin adhesive compositions. Serial No. 538,848, Sept. 7. Class 5.

Asher & Boretz, Inc., New York, N. Y. Plastic-coated cotton fabrics. Serial No. 521,235, Sept. 7. Class 42.

Atlantic Mercantile Company, New York, N. Y. Waterproof material. Serial No. 547,887, Sept. 7. Class 42.

B. & B. Products Company, Mishawaka, Ind., Cleaning compound. Serial No. 543,410, Sept. 7. Class 4.

Baird, William M., Chicago, Ill. Refrigerated locker units. Serial No. 528,246, Sept. 7. Class 31.

Baldwin Company, The, Cincinnati, Ohio. Electric musical instruments. Serial No. 525,183, Sept. 7. Class 36.

Bangert, Harold W., doing business as Pantato Company, Fargo, N. Dak. Washed and graded potatoes. Serial No. 505,094, Sept. 7. Class 46.

Barbet Mills, Incorporated, Gastonia, N. C. Knitted fabrics. Serial No. 535,457, Sept. 7. Class 42.

Baron, H., & Co., Inc., Linden, N. J. Flavoring extracts and syrup. Serial No. 533,529, Sept. 7. Class 45.

Barrett Textile Corporation, New York, N. Y. Plastic coated textile fabrics, in the piece. Serial No. 517,399, Sept. 7. Class 42.

Becken, A. C., Co., Chicago, Ill. Jewelry. Serial No. 543,008, Sept. 7. Class 28.

Benrose Fabrics Corporation, New York, N. Y. Textile fabrics in the piece. Serial No. 536,484, Sept. 7. Class 42.

Benrose Fabrics Corporation, New York, N. Y. Textile fabrics in the piece. Serial No. 536,487, Sept. 7. Class 42.

Berlinger, Joseph, Co., New York, N. Y. Piece goods of rayon. Serial No. 537,966, Sept. 7. Class 42.

Bertauche, Maurice, San Anselmo, Calif. Hollandaise sauce, bearnaise sauce, and canned babas in rum (French rum cakes) Serial No. 530,457, Sept. 7. Class 46.

Betty Fashions, Inc., New York, N. Y. Ladies' coats and suits. Serial No. 531,992, Sept. 7. Class 39.

Bexatol Vitamin Products: *See*—
Carbonaro, Frank.

Biltwell Company, Inc., St. Louis, Mo. Men's trousers. Serial No. 534,984, Sept. 7. Class 39.

Bledsoe, Forrest W., doing business as Bledsoe Sanitary Service, Columbus, Ohio. Bacteria-producing mixture. Serial No. 554,466, Sept. 7. Class 6.

Bledsoe Sanitary Service: *See*—
Bledsoe, Forrest W.

Blumenstein, Ross & Lentz, New York, N. Y. Ladies' suits, dresses and blouses. Serial No. 545,223, Sept. 7. Class 39.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,282, Sept. 7. Class 42.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,288, Sept. 7. Class 42.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,293, Sept. 7. Class 42.

Boland Mfg. Co., Chicago, Ill. Window curtains, window draperies, crib sheets, etc. Serial No. 521,239, Sept. 7. Class 42.

Bomse, H., & Bro., Inc., Philadelphia, Pa. Ladies' and misses' coats, suits and dresses. Serial No. 544,971, Sept. 7. Class 39.

Bone Dry Shoe Mfg. Co., Tacoma, Wash. Leather logger shoes. Serial No. 533,840, Sept. 7. Class 39.

Boonton Full Fashion Hosiery Mills, Boonton, N. J. Hosiery. Serial No. 531,295, Sept. 7. Class 39.

Boots Pure Drug Company Limited, Nottingham, England. Pharmaceutical preparations of sulphathiazole compound. Serial No. 509,691, Sept. 7. Class 6.

Boston Top Lift Company, The: *See*—
Freedman, Harry.

British Music & Tennis Strings Limited, London, England. Strings for musical instruments. Serial No. 538,715, Sept. 7. Class 36.

Brizel Leather Corporation, New York, N. Y. Leather bands for caps and hats. Serial No. 544,535, Sept. 7. Class 39.

Brick, Specially designed acid-proof. General Refractories Company. 381,176, Sept. 17, 1940. Republished Sept. 7.
Bricks. Western Brick Company. 293,053, Apr. 5, 1932. Republished Sept. 7.
Bricks. Western Brick Company. 296,540, Aug. 9, 1932. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 411,669–70, Jan. 30, 1945. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 412,099, Feb. 20, 1945. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 412,235, Feb. 27, 1945. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 414,717, June 26, 1945. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 415,303, Aug. 7, 1945. Republished Sept. 7.
Bricks, Standard refractory. General Refractories Company. 422,618, Aug. 6, 1946. Republished Sept. 7.
Bricks, Superduty fire clay. General Refractories Company. 362,802, Nov. 29, 1938. Republished Sept. 7.
Bricks, Unburned suspended arch and wall. General Refractories Company. 426,640, Jan. 7, 1947. Republished Sept. 7.
Cement, Portland. Alpha Portland Cement Company. 70,422, re-renewed Sept. 1, 1948. O. G. Sept. 7.
Insulation, Block and plastic heating. General Refractories Company. 413,145, Apr. 10, 1945. Republished Sept. 7.
Mortar, Kaolin base refractory bonding. General Refractories Company. 362,803, Nov. 29, 1938. Republished Sept. 7.

CLASS 13

Awning arms, Lateral. Astrup Company. 305,957, Aug. 29, 1933. Republished Sept. 7.
Bolts, nuts, screws, metal washers, Threaded. H. M. Harper Company. 420,360, Apr. 9, 1946. Republished Sept. 7.
Brackets, Metal clamp. Whitmore Products. 440,474, Sept. 7; Serial No. 511,525, published June 8, 1948.
Brackets, Window shade and curtain rod. L. P. Jeffreys. 440,463, Sept. 7; Serial No. 507,983, published June 1, 1948.
Clips, Wire-rope. Lamson & Sessions Company. 162,529, Dec. 19, 1922. Republished Sept. 7.
Fasteners, and components therefor, Slide. Talon, Inc. 501,980, Sept. 7; Serial No. 508,194, published June 8, 1948.
Fasteners and components therefor, Slide. Talon, Inc. 501,991, Sept. 7; Serial No. 527,817, published May 11, 1948.
Fasteners and components therefor, Slide. Talon, Inc. 501,993, Sept. 7; Serial No. 527,885, published May 25, 1948.
Fasteners, Separable. Queen Manufacturing Corp. 440,462, Sept. 7; Serial No. 507,490, published June 8, 1948.
Fasteners, Separable. Queen Manufacturing Corp. 440,470, Sept. 7; Serial No. 510,445, published June 8, 1948.
Fasteners, Slide. Talon, Inc. 501,982, Sept. 7; Serial No. 512,210, published June 1, 1948.
Fasteners, Slide. Talon, Inc. 501,990, Sept. 7; Serial No. 527,809, published June 1, 1948.
Fasteners, Slide. Talon, Inc. 501,994, Sept. 7; Serial No. 527,887, published May 25, 1948.
Fence, metal fence posts, fence parts, etc., Metal. Page Steel and Wire Company. 262,417, Oct. 8, 1929. Republished Sept. 7.
Freezing and dehydrating food trays, Perforated aluminum quick. W. G. Ballantyne. 440,464, Sept. 7; Serial No. 508,092, published June 8, 1948.
Hollow ware, Base metal cooking. Enterprise Aluminum Company. 501,985, Sept. 7; Serial No. 522,799, published June 8, 1948.
Lawn sprinklers. Accmatool Co., Inc. 440,466, Sept. 7; Serial No. 509,684, published May 25, 1948.
Pipe fittings, valves, cocks, etc., Metal. Cleveland Heater Company. 244,817, renewed July 31, 1948. O. G. Sept. 7.
Pipes and tubes, Metal. National Supply Company. 370,577, Aug. 29, 1939. Republished Sept. 7.
Pipes, tubes, etc., Rolled or pressed straight or cylindrical or tapered, plain or fluted, metal. Union Metal Manufacturing Company. 440,459, Sept. 7; Serial No. 506,709, published June 17, 1947.
Plugs, for dry oil and gas wells, and metal pipe coupling, etc., Metal. National Supply Company. 136,551, Nov. 2, 1920. Republished Sept. 7.
Rivets, Copper. Copper Range Company. 349,305, Aug. 24, 1937. Republished Sept. 7.
Rubber supplies, Plumbers'. H. O. Canfield Co. 440,484, Sept. 7; Serial No. 514,003, published June 1, 1948.
Rubber supplies, Plumbers'. H. O. Canfield Co. 440,500, Sept. 7; Serial No. 518,454, published June 1, 1948.
Turnbuckles. Turnbuckles, Inc. 419,985, Mar. 19, 1946. Republished Sept. 7.
Valves for automotive air brakes, Brake. Bendix-Westinghouse Automotive Air Brake Company. 392,585, Jan. 6, 1942. Republished Sept. 7.
Valves, Gas pressure control. Pure Carbonic, Incorporated. 440,475, Sept. 7; Serial No. 511,578, published Feb. 3, 1948.
Valves, Hand-operated gas or liquid control. Air Reduction Sales Company. 440,468, Sept. 7; Serial No. 510,149, published Feb. 10, 1948.

CLASS 14

Castings and forgings in the rough, Stoker. Detroit Stoker Company. 299,940, Jan. 3, 1933. Republished Sept. 7.
Copper sheet, copper in rolls, copper wire, etc. Copper Range Company. 348,701, Aug. 3, 1937. Republished Sept. 7.
Forgings, Steel. Heppenstall Forge & Knife Company. 233,787, Oct. 11, 1927. Republished Sept. 7.
Ingots, castings, pressed parts, etc., Bronze. American Brass Company. 250,026–7, renewed Nov. 27, 1948. O. G. Sept. 7.
Metal balls for plugging dry wells, babbitt metal, solder, etc. National Supply Company. 121,642, May 14, 1918. Republished Sept. 7.
Metals, Heat-treated ferrous. Link-Belt Company. 248,922, renewed Nov. 6, 1948. O. G. Sept. 7.
Rods, steel and iron wire, etc., Steel and iron. Page Steel and Wire Company. 288,450, Oct. 27, 1931. Republished Sept. 7.
Steel, cold rolled strip steel, etc., Hot rolled strip. Sharon Steel Corporation. 354,873, Mar. 1, 1938. Republished Sept. 7.

CLASS 15

Gasoline, kerosene, motor fuel oils, etc. Continental Oil Company. 306,919, Oct. 3, 1933. Republished Sept. 7.
Grease, Lubricating. Continental Oil Company. 283,689, June 2, 1931. Republished Sept. 7.
Grease, Lubricating. Continental Oil Company. 284,103, June 16, 1931. Republished Sept. 7.
Grease, Lubricating. Continental Oil Company. 358,861, July 26, 1938. Republished Sept. 7.
Grease, Lubricating. Continental Oil Company. 358,863, July 26, 1938. Republished Sept. 7.
Grease, Lubricating. Continental Oil Company. 379,075, July 2, 1940. Republished Sept. 7.
Oil and gasoline, Illuminating. Red "C" Oil Company. 244,587, renewed July 24, 1948. O. G. Sept. 7.
Oil, Lubricating. Continental Oil Company. 283,566–8, June 2, 1931. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 283,690–3, June 2, 1931. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 284,307, June 23, 1931. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 289,233, Nov. 24, 1931. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 292,339, Mar. 15, 1932. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 292,518, Mar. 15, 1932. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 297,088, Aug. 30, 1932. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 299,471, Dec. 6, 1932. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 358,862, July 26, 1938. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 359,371, Aug. 16, 1938. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 367,374, May 16, 1939. Republished Sept. 7.
Oil, Lubricating. Continental Oil Company. 371,925, Oct. 17, 1939. Republished Sept. 7.
Oil, Lubricating. International Harvester Company. 233,573, Oct. 4, 1927. Republished Sept. 7.
Oils and greases, Lubricating. Burger-Adams Petroleum Company. 226,059, Mar. 29, 1927. Republished Sept. 7.
Oils and greases, Naphtha and lubricating. R. J. Brown Company. 399,598, Jan. 19, 1943. Republished Sept. 7.
Oils, Motor. Continental Oil Company. 386,967, Apr. 29, 1941. Republished Sept. 7.
Oils, Penetrating. Shaler Company. 366,687, Apr. 25, 1939. Republished Sept. 7.
Oils, Refined, semirefined, and unrefined. Standard Oil Company of New Jersey. 244,001, renewed July 3, 1948. O. G. Sept. 7.

CLASS 16

Algin product. Kelco Company. 407,419, June 6, 1944. Republished Sept. 7.
Finish for floors. C. B. Dolge Company. 382,325, Oct. 22, 1940. Republished Sept. 7.
Oxide, Hydrated yellow iron. Witco Chemical Company. 419,308, Feb. 12, 1946. Republished Sept. 7.
Paints. N. V. Vernis- en Verffabriek v. h. J. Wagemakers & Zonen. 170,733, renewed July 24, 1943. O. G. Sept. 7.
Polish, floor wax, floor dressing, etc., Furniture. C. B. Dolge Company. 384,326, Jan. 14, 1941. Republished Sept. 7.
Solvents, Hydrocarbon. Standard Oil Company of New Jersey. 250,662, renewed Dec. 11, 1948. O. G. Sept. 7.

CLASS 17

Cigarettes. S. S. Pierce Co. 229,043, June 21, 1927. Republished Sept. 7.
Cigars. S. S. Pierce Co. 47,704, Nov. 14, 1905. Republished Sept. 7.
Cigars, S. S. Pierce Co. 58,233, Dec. 11, 1906. Republished Sept. 7.
Cigars. S. S. Pierce Co. 176,139, Nov. 20, 1923. Republished Sept. 7.
Cigars. S. S. Pierce Co. 204,467, Oct. 20, 1925. Republished Sept. 7.
Cigars. A. Sensenbrenner Sons. 502,033, Sept. 7; Serial No. 537,834, published June 1, 1948.
Snuff. United States Tobacco Company. 502,019, Sept. 7; Serial No. 531,550, published June 1.
Tobacco, chewing and smoking. Bloch Brothers Tobacco Co. 502,027, Sept. 7; Serial No. 536,037, published June 1, 1948.
Tobacco, Smoking. John Cotton, Limited. 249,204, renewed Nov. 13, 1948. O. G. Sept. 7.
Tobacco, Smoking. Penn Tobacco Company. 502,036, Sept. 7; Serial No. 539,746, published June 8, 1948.
Tobacco, Smoking and chewing. P. Lorillard Company. 502,029, Sept. 7; Serial No. 536,916, published June 8, 1948.
Tobacco, Smoking and chewing. P. Lorillard Company. 502,030, Sept. 7; Serial No. 536,921, published June 8, 1948.

CLASS 19

Automobiles. Société Lorraine des Anciens Etablissements de Dietrich & Cie. de Lunéville. 60,089, re-renewed Jan. 29, 1947. O. G. Sept. 7.
Bicycle parts, brakes, motor cycle parts. Eclipse Machine Company. 110,489, May 30, 1916. Republished Sept. 7.
Brake chambers and parts thereof, Fluid pressure. Bendix-Westinghouse Automotive Air Brake Company. 385,881, Mar. 18, 1941. Republished Sept. 7.
Coaster-brakes and parts thereof, Back-pedaling. Eclipse Machine Co. 54,705, June 26, 1908. Republished Sept. 7, 1948.
Parachutes. Irving Air Chute Company, Inc. 255,440, Apr. 23, 1929. Republished Sept. 7.
Parachutes, parachute packs, and parachute harness. Irving Air Chute Company, Inc. 228,084–5, May 24, 1948. Republished Sept. 7.
Parachutes, parachute packs, and parachute harness. Irving Air Chute Company, Inc. 228,087, May 24, 1927. Republished Sept. 7.

CLASS 21

Carbons, Negative. Speer Carbon Company. 118,714, Sept. 25, 1917. Republished Sept. 7.
Clips, Connection. Mueller Electric Co. 249,985, renewed Nov. 27, 1948. O. G. Sept. 7.
Controls, Electric. Federal Gauge Company. 245,654–5, renewed Aug. 21, 1948. O. G. Sept. 7.
Electrical goods and apparatus. Edwards and Company, Inc. 295,938, July 19, 1932. Republished Sept. 7.
Radio receiving sets. Hallicrafters Co. 420,247, Apr. 2, 1946. Republished Sept. 7.
Radio receiving sets, loud speakers, sound amplifiers, etc. W. J. Halligan. 311,778, Apr. 3, 1934. Republished Sept. 7.
Radio supplies. Trimm Radio Manufacturing Co. 207,213, Dec. 22, 1925. Republished Sept. 7.
Ranges and parts thereof, Electric. Electromaster, Inc. 353,656, Jan. 11, 1938. Republished Sept. 7.
Stoves and heating elements, Electric. Electromaster, Inc. 334,721, May 12, 1936. Republished Sept. 7.
Switches, Manually operable, mechanically operable and electrically operable. Hartman Manufacturing Company. 317,349, Sept. 25, 1934. Republished Sept. 7.
Switches, Manually operable, mechanically operable, and electrically operable. Hartman Manufacturing Company. 317,401, Sept. 25, 1934. Republished Sept. 7.
Wire, Insulated. National India Rubber Co. 70,737, re-renewed Sept. 29, 1948. O. G. Sept. 7.
Wires and cables, Bare and insulated electrical. General Cable Corporation. 247,436, renewed Sept. 25, 1948. O. G. Sept. 7.
Wires, Lead. Federal Gauge Co. 244,615, renewed July 24, 1948. O. G. Sept. 7.

CLASS 22

Athletic and sporting goods. Amco Sports Distributors. 502,016, Sept. 7; Serial No. 530,277, published May 25, 1948.
Camp folding table and grid, Combined. O. E. Fenske. 440,448, Sept. 7; Serial No. 502,508, published May 25, 1948.
Dolls. A. L. Clark. 440,515, Sept. 7; Serial No. 523,095, published May 25, 1948.
Dolls. H. Cohn. 440,506, Sept. 7; Serial No. 520,092, published May 25, 1948.
Dolls. A. Norton. 440,441, Sept. 7; Serial No. 492,217, published May 25, 1948.
Dolls. Show Doll Co. 440,511, Sept. 7; Serial No. 521,759, published May 25, 1948.
Dolls. Strawbridge & Clothier. 53,187, May 29, 1906. Republished Sept. 7.
Dolls and doll-sized animal characters. Coronet Toy Manufacturing Co. 440,494, Sept. 7; Serial No. 516,535, published May 25, 1948.
Dolls and toy rubber animals and figures. Ideal Novelty & Toy Co. 440,498, Sept. 7; Serial No. 518,078, published May 25, 1948.

Fish lures and fish lure kits, Artificial. V. A. Kasin. 440,519, Sept. 7; Serial No. 525,218, published May 25, 1948.
Fish nets, Folding. T. A. Finn. 440,508, Sept. 7; Serial No. 520,623, published May 25, 1948.
Fishing bait, Artificial. E. C. Webb. 502,045, Sept. 7; Serial No. 528,594.
Fishing line. Ashaway Line & Twine Manufacturing Company. 501,987, Sept. 7; Serial No. 526,578, published May 25, 1948.
Fishing lines. Norwich Line Company, Inc. 440,478, Sept. 7; Serial No. 512,527, published May 25, 1948.
Fishing lines. United States Whip Company. 250,078, renewed Nov. 27, 1948. O. G. Sept. 7.
Fishing lures, Artificial. Flectolite. 440,504, Sept. 7; Serial No. 519,805, published May 25, 1948.
Fishing lures, Artificial. R. L. Line. 440,520, Sept. 7; Serial No. 525,223, published May 25, 1948.
Fisfling reels. J. E. North. 440,473, Sept. 7; Serial No. 511,283, published May 25, 1948.
Fishing reels. E. B. Rosner. 440,499, Sept. 7; Serial No. 518,325, published May 25, 1948.
Frames for holding an inflatable buoyant floatable object. Hampden Specialty Products, Inc. 440,444, Sept. 7; Serial No. 500,753, published May 25, 1948.
Game of skill including a game board and movable game pieces. J. Sears. 440,507, Sept. 7; Serial No. 520,532, published May 25, 1948.
Games. W. R. Mabry. 440,516, Sept. 7; Serial No. 523,848, published May 25, 1948.
Golf clubs and parts thereof. J. L. Nilson. 440,505, Sept. 7; Serial No. 519,894, published May 25, 1948.
Golf instruction and practice apparatus. R. Crowley. 440,514, Sept. 7; Serial No. 522,346, published May 25, 1948.
Holder for toys, Suspension. W. E. Kick. 440,513, Sept. 7; Serial No. 521,898, published May 25, 1948.
Play balls, Rubber. Eagle Rubber Co., Inc. 501,988, Sept. 7; Serial No. 526,921, published May 25, 1948.
Playthings, Children's. M. F. Florest. 440,467, Sept. 7; Serial No. 509,763, published May 25, 1948.
Score boards, Cribbage. R. C. Shipley. 502,000, Sept. 7; Serial No. 529,313, published Mar. 30, 1948.
Tennis rackets, tennis balls, badminton rackets, etc. M. M. Ross. 440,445, Sept. 7; Serial No. 500,829, published May 25, 1948.
Tilts having a reel and line, Non-freezing. The Fishcrafters. 440,450, Sept. 7; Serial No. 502,966, published May 25, 1948.
Toy bird figure, Activated. House of Platé. 440,472, Sept. 7; Serial No. 511,219, published May 25, 1948.
Toy blocks. Creative Educational Society. 440,491, Sept. 7; Serial No. 515,658, published May 25, 1948.
Toys. Quvas Products Inc. 440,489, Sept. 7; Serial No. 515,548, published May 25, 1948.
Toys, Animated. Kohner Bros. 440,492, Sept. 7; Serial No. 516,081, published June 1, 1948.
Toys, Animated. Kohner Bros. 440,503, Sept. 7; Serial No. 519,759, published June 1, 1948.
Toys, Aquatic. Dolphin Toys. 440,501, Sept. 7; Serial No. 519,182, published May 25, 1948.
Toys, Collapsible. Becklin Limited. 502,044; Sept. 7; Serial No. 516,391.
Toys, dolls, and games. Firm of F. A. O. Schwartz. 31,839, re-renewed Aug. 2, 1948. O. G. Sept. 7.
Whistles, toy piano sets, plastic toy furniture sets, etc., Plastic. New York Merchandise Co., Inc. 440,524, Sept. 7; Serial No. 489,524.

CLASS 23

Blowers, crushers for rock ore, and the like, Air. Denver Fire Clay Company. 246,822–3, renewed Sept. 18, 1948. O. G. Sept. 7.
Brushes, end brushes, and twisted stem brushes, Rotary. Osborn Manufacturing Company. 417,141, Oct. 16, 1945. Republished Sept. 7.
Brushes forming parts of industrial machines, brushes made from wire, Wire. Osborn Manufacturing Company. 430,118, June 10, 1947. Republished Sept. 7.
Carriers, Glue-clamp. N. J. Billstrom. 210,419, Mar. 16, 1926. Republished Sept. 7.
Corn shellers, disk harrows, and lime sowers. General Implement Corporation. 426,294, Dec. 24, 1946. Republished Sept. 7.
Cutting machine, Abrasive. American Chain & Cable Company, Inc. 397,123, Aug. 18, 1942. Republished Sept. 7.
Cutting machine, Abrasive. Andrew C. Campbell, Inc. 304,871, July 18, 1933. Republished Sept. 7.
Engines and parts thereof, Steam. National Supply Company of California. 322,069, Feb. 26, 1935. Republished Sept. 7.

Horns and audible warning signals, Fluid pressure operated. Bendix-Westinghouse Automatic Air Brake Company. 381,435, Sept. 24, 1940. Republished Sept. 7.
Lawn mowers. American Chain & Cable Company, Inc. 421,449, June 4, 1946. Republished Sept. 7.
Lawn mowers. American Chain & Cable Company, Inc. 424,877, Oct. 29, 1946. Republished Sept. 7.
Machinery, Metal-swaging. Andrew C. Campbell, Incorporated. 282,879, May 5, 1931. Republished Sept. 7.
Machines and apparatus and parts thereof. Buffalo Forge Company. 147,943, Nov. 8, 1921. Republished Sept. 7.
Machines for cutting sheet metal. Andrew C. Campbell, Incorporated. 171,567, Aug. 7, 1923. Republished Sept. 7.
Mounts, Rubber vibration. Hamilton Kent Manufacturing Company. 417,722, Nov. 13, 1945. Republished Sept. 7.
Pick axes, cavadores, barretones, etc. Collins Company. 70,752–3. Sept. 29, 1908. Republished Sept. 7.
Printing machines. Addressograph Company. 244,504, July 17, 1928. Republished Sept. 7.
Pumps and parts thereof. La Bour Company, Inc. 318,891, Nov. 6, 1934. Republished Sept. 7.
Saw bits and saw shanks. Southern Saw Works, Inc. 431,675, July 29, 1947. Republished Sept. 7.
Sprayers and parts thereof, Hand-operated portable. Hudson Manufacturing Co. 232,872, Sept. 20, 1927. Republished Sept. 7.
Straps, Check. E. F. Houghton & Co. 234,206, Oct. 18, 1927. Republished Sept. 7.
Tools. W. A. Whitney Manufacturing Company. 188,662, Sept. 2, 1924. Republished Sept. 7.
Tools, Live line maintenance. A. B. Chance Company. 399,495, Jan. 12, 1943. Republished Sept. 7.
Tractors. Clark Tructractor Company. 240,492, renewed Mar. 27, 1948. O. G. Sept. 7.

CLASS 24

Dry-cleaning machinery or apparatus. American Laundry Machinery Company. 502,026, Sept. 7; Serial No. 535,376, published June 1, 1948.
Laundry machinery. American Laundry Machinery Company. 502,023–4. Sept. 7; Serial Nos. 535,369–70, published June 1, 1948.
Laundry machinery. American Laundry Machinery Company. 502,025. Sept. 7; Serial No. 535,372, published June 1, 1948.
Racks, Clothes drying. Denver Wood Products Co. 440,457, Sept. 7; Serial No. 506,429, published May 11, 1948.

CLASS 25

Latches and catches. National Lock Co. 425,586, Nov. 26, 1946. Republished Sept. 7.
Locks, keys, and key blanks. National Lock Co. 415,102, July 10, 1945. Republished Sept. 7.
Seals, Base-metal truck, car, and shipping-case, etc. E. J. Brooks and Company. 255,140, Apr. 16, 1929. Republished Sept. 7.

Strassner, John F., New York, N. Y. Dress. 150,897, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,898, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,899, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,900, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,901, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,902, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,903, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,904, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,905, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,906, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,907, Sept. 7.
Strassner, John F., New York, N. Y. Dress. 150,908, Sept. 7.
Strassner, John F., New York, N. Y. Coat. 150,909, Sept. 7.
Strassner, John F., New York, N. Y. Dress ensemble. 150,910, Sept. 7.
Tanasso, Vincent, Harrison, N. Y. Spectacle frame. 150,911, Sept. 7.
Tip Top Cookies Inc., assignee, et al.: *See*—
Forrer, Walter O.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Underwood, Gilbert S., Washington, D. C. Combined drawer pull and label holder. 150,912, Sept. 7.
Wagner, Franz, Chicago, Ill., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Hand and nail brush. 150,913, Sept. 7.
Wolfer, Herman, Trenton, N. J., and M. Harder, Morton, Pa. Picture projector. 150,914, Sept. 7.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 7TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aamot, Sven, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Control apparatus. 2,448,852, Sept. 7.
Abbott-Becker Distributing & Manufacturing, assignee: *See*—
Burke, Vincent D.
Abernathy, Bill J., Jr.: *See*—
Piemel, Lawrence M., and Abernathy.
Adams, Harold W., Santa Monica, and O. A. Wheelon, Pacific Palisades, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Duplex four-way valve. 2,448,649, Sept. 7.
Addressograph-Multigraph Corporation, assignee: *See*—
Van Dusen, Charles H., Jr.
Agens, Maynard C., Schenectady, N. Y., assignor to General Electric Company. Methyl siloxane elastomers. 2,448,756, Sept. 7.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Ambler, Joseph A., and Curl.
Fein, Martin L., and Fisher.
Kester, Ernest B., and Preusser.
McCready, Rolland M., Owens, and Maclay.
Roberts, Earl J., Ambler, and Curl.
Schaeffer, Benjamin B.
Air Reduction Company, Incorporated, assignee: *See*—
Tyrner, Joseph M.
Aitken, William J., Manitowoc, Wis. Electric control switch. 2,448,650, Sept. 7.
Aker, Evender S., deceased, West Point Pleasant, N. J.: F. L. Aker, executrix. Noiseless rudder post bearing. 2,448,651, Sept. 7.
Aker, Florence L., executrix: *See*—
Aker, Evender S.
Alban, Clarence F., Pontiac, assignor to W. M. Chace Company, Detroit, Mich. Electrical resistor. 2,448,757, Sept. 7.
Alderson, Witty L., Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Insolubilizing hydrolyzed ethylene vinyl ester polymers. 2,448,946, Sept. 7.
Allen, Adda M., Arlington, Va., assignor to Disposable Bottle Corporation, Washington, D. C. Nursing unit. 2,448,569, Sept. 7.
Allen, Charles F. H., C. V. Wilson, and G. F. Frame, assignors to Eastman Kodak Company, Rochester, N. Y. Sulfonamido disazo dye. 2,448,853, Sept. 7.
Allen, Earl M., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Trap circuit control for railway signals. 2,448,570, Sept. 7.
Aller, Willis F., assignor to The Sheffield Corporation, Dayton, Ohio. Apparatus for arranging, gauging, and assorting articles according to size. 2,448,652, Sept. 7.
Aller, Willis F., assignor to The Sheffield Corporation, Dayton, Ohio. Size gauging device. 2,448,653, Sept. 7.
Alles, Francis P., North Plainfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements having antihalation layer composed of vinyl pyridine polymer with vinyl-pyridine polymer subiayer and outer protective layer. 2,448,507, Sept. 7.
Alles, Francis P., North Plainfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements having a silver halide layer and an antihalation layer on a polyvinylpyridine layer. 2,448,508, Sept. 7.
Allied Products Corporation, assignee: *See*—
Richard, Bernard O.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Van Zandt, Claiborne C.
Alvis Limited, assignee: *See*—
Smith-Clarke, George T., and Varney.
Alvord, Charles C.: *See*—
Flygare, Carl G., and Alvord.
Ambler, Joseph A.: *See*—
Roberts, Earl J., Ambler, and Curl.
Ambler, Joseph A., New Orleans, La., and A. L. Curl, Winter Haven, Fla., assignors to the United States of America as represented by the Secretary of Agriculture. Production of itaconic acid. 2,448,506, Sept. 7.
American Brake Shoe Company, assignee: *See*—
Heidenthal, Warren C.
American Can Company, assignee: *See*—
Butler, William F.
Erb, George C.
American Cyanamid Company, assignee: *See*—
Hultquist, Martin E.
Johnston, William B.
Libby, Raymond L.
Moos, Anthony M., and Upham.
Parker, Robert P., and Denton.
Scalera, Mario, and Joyce.
Upham, Sidney D.
American Cystoscope Makers, Inc., assignee: *See*—
Scott, William W., and Lutz.
American Pulley Company, assignee: *See*—
Williams, William A.
Anderson, Harry W., Chicago, Ill. High-low gas valve. 2,448,654, Sept. 7.
Angell, Robert C., Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company. Dental engine handpiece. 2,448,758, Sept. 7.
Antony, Charles, Jr., Baldwin, and D. Mannheimer, Hempstead, N. Y., assignors to The Sperry Corporation. Electrical connector. 2,448,509, Sept. 7.
Arens, Charles A., assignor to Arens Controls, Inc., Chicago, Ill. Control unit. 2,448,696, Sept. 7.
Arens Controls, Inc., assignee: *See*—
Arens, Charles A.
Argus, Incorporated, assignee: *See*—
Clapp, Roy A.
Armbruster, John W., East Rockaway, assignor to International Business Machines Corporation, New York, N. Y. Woven sensing grids for perforated records. 2,448,759, Sept. 7.
Armbruster, John W., East Rockaway, assignor to International Business Machines Corporation, New York, N. Y. Woven sensing grids for perforated records. 2,448,760, Sept. 7.
Armbruster, John W., East Rockaway, assignor to International Business Machines Corporation, New York, N. Y. Circuit bearing element. 2,448,761, Sept. 7.
Arthur, Harry J., Chicago, and H. S. McCrory, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Injection molding apparatus. 2,448,947, Sept. 7.
Arundale, Erving: *See*—
Mikeska, Louis A., and Erving.
Ashaway Line & Twine Mfg. Co., assignee: *See*—
Crandall, Julian T.
Askania Regulator Company, assignee: *See*—
Glass, Paul.
Atlantic Refining Company, assignee: *See*—
Heiligmann, Randall G.
Turner, William R.
Atlas Powder Company, assignee: *See*—
Carey, Claude H.
Attorney General of the United States, Vested in the: *See*—
Grunfeld, Maximilien.
Hopff, Heinrich, and Rapp.
Automatic Electric Laboratories, Inc., assignee: *See*—
Lomac, Clarence E.
Wood, Fredric E., Gienger, Dodker, and Sargission.
Automatic Locking Devices, Incorporated, assignee: *See*—
Spraragen, Louis.
Avakian, Souren: *See*—
Martin, Gustav J., and Avakian.
Babcock, Henry H., Oak Park, assignor, by mesne assignments, to Conlon-Moore Corporation, Cicero, Ill. Ironing machine. 2,448,948, Sept. 7.
Babylon, Elvan R.: *See*—
Weeser, Carl W., Leffingwell, Babylon, and Schell.
Baird, William M., Chicago, Ill. Drawer for refrigerated lockers. 2,448,949, Sept. 7.
Baker, Richard F.: *See*—
Hillier, James, and Baker.
Bakke, Robert, Minneapolis, Minn. Welding glove. 2,448,697, Sept. 7.
Balch, Ralph H., and I. G. McCormick, Cumberland, Md., assignors to Celanese Corporation of America. Sized organic derivative of cellulose yarn. 2,448,571, Sept. 7.
Ball Brothers Company, assignee: *See*—
Shaffer, Stewart.
Bank of America National Trust and Savings Association, assignee: *See*—
McKenzie, Wendell R.
Barber, Everett M., Wappingers Falls, and J. B. Malin, Fishkill, assignors, by mesne assignments, to The Texas Company, New York, N. Y. Internal-combustion engine and operating. 2,448,950, Sept. 7.

Barham, Harold N., Manhattan, Kans., assignor to Sharples Chemicals Inc., Philadelphia, Pa. Chlorination of starch and products thereof. 2,448,510, Sept. 7.

Barlow & Seelig Manufacturing Company, assignee: *See*— Schroeder, Simon E.

Barnes, Malcolm H., and E. L. McCandless, Kenmore, N. Y., assignors to The Linde Air Products Company. Glossing corundum and spinel. 2,448,511, Sept. 7.

Barnett, Allan E.: *See*— Robey, Richard F., Fedirko, and Barnett.

Baum, Joseph L., Hartford, Conn. Toy bank. 2,448,951, Sept. 7.

Begun, Albert E., assignor to Eastman Kodak Company, Rochester, N. Y. Continuous film drier. 2,448,854, Sept. 7.

Bell, De Witt, et al.: *See*— Kuzmick, Joseph N., and Bell.

Bell Telephone Laboratories, Incorporated, assignee: *See*— Biggs, Burnard S. Blazier, Charles R., and Hale. Fair, Irvin E. Frosch, Carl J. Fuller, Calvin S. Helsing, Raymond A. Main, Frank S. Merrill, Francis G. Rose, Charles F. P.

Bendix Aviation Corporation, assignee: *See*— Huckleberry, Harry M.

Benedict, T. N., Mfg. Co., assignee: *See*— Costa, Mannie F.

Berry, Kenneth L., Hockessin, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Obtaining dispersions of polytetrafluoroethylene-ethylene copolymers. 2,448,952, Sept. 7.

Beste, Harold E., East Rutherford, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Process and apparatus for monitoring synchronizing generators. 2,448,762, Sept. 7.

Biggs, Burnard S., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Composition comprising an acyl peroxide cured polyester and an alkaline carbonate. 2,448,572, Sept. 7.

Biot, Maurice A., Pasadena, and T. H. Wiancko, Altadena, Calif. Flutter predicting apparatus. 2,448,698, Sept. 7.

Black, James R., and W. F. Shurts, Rockford, Ill., assignors to Twin Disc Clutch Company, Racine, Wis. Aerodynamic brake and hoist combination. 2,448,855, Sept. 7.

Blackman, Enoch J., Sherman, Tex. Door holder. 2,448,953, Sept. 7.

Blakely, Robert T.: *See*— Robbins, Joseph J., and Blakely.

Blazier, Charles R., Pittsburgh, Pa., and D. A. S. Hale, Verona, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cathode structure for electron discharge devices. 2,448,573, Sept. 7.

Bloomfield, John J., assignor to Lockheed Aircraft Corporation, Burbank, Calif. Clutch mechanism. 2,448,763, Sept. 7.

Bohannon, William A., Uniondale, N. Y. Electric heating device. 2,448,856, Sept. 7.

Boisvert, Nobert, assignee: *See*— Lemire, Joseph.

Borg-Warner Corporation, assignee: *See*— Gamble, David E. McCulloch, Robert P., and Ryde.

Bothe, Werner H., Kenosha, assignor to Worldsbest Industries, Inc., Cudahy, Wis. Clamp for curtain stretchers. 2,448,574, Sept. 7.

Bothwell, Frank E.: *See*— Coffin, Francis P., Jr., Bothwell, and Crout.

Bouwers, Albert, assignor to N. V. Optische Industrie "De Oude Delft," Delft, Netherlands. Schmidt type image former with negative meniscus lens spherical aberration corrector. 2,448,699, Sept. 7.

Bowen, Cedric A., Aston, Birmingham, England, assignor to The Timken Roller Bearing Company, Canton, Ohio. Axle box. 2,448,655, Sept. 7.

Bowman, Granville M., assignee: *See*— Sohnlein, Fred W.

Boyer, Hugh N., near Canfield, Ohio. Toggle bolt. 2,448,700, Sept. 7.

Brackett, Newell, Bala Cynwyd, Pa. Tube expander. 2,448,512, Sept. 7.

Bradley, William E.: *See*— Johnson, Nels, and Bradley.

Breese Burners, Inc., assignee: *See*— Breese, James L.

Breese, James L., assignor, by mesne assignments to Breese Burners, Inc., Santa Fe, N. Mex. Multiple orchard burner. 2,448,656, Sept. 7.

Brennan, Joseph B., Bratenahl, and L. M. Conrad, Cleveland, Ohio, said Conrad assignor to said Brennan. Electrostatic condenser plate. 2,448,513, Sept. 7.

Brice, William L., Oak Ridge, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Stabilization of photographic emulsions. 2,448,857, Sept. 7.

Briggs, Walter H., assignor to Burman & Sons Limited, Birmingham, England. Vehicle steering mechanism. 2,448,701, Sept. 7.

Brinson, Gaylord A., Mooreland, Ind. Round window with revolving sash. 2,448,764, Sept. 7.

Bristol Aeroplane Company Limited, The, assignee: *See*— D'Assis-Fonseca, Evelyn Cecil Muschamp.

Britain, Cecil E.: *See*— Love, Homer, Britain, Langton, and R. E. and C. E. Van Gundy.

Brock, Harold L.: *See*— Pinardi, Charles P., and Brock.

Brothers, Frederick C., Los Angeles, Calif. Combined handle means and file guide for saw files. 2,448,702, Sept. 7.

Brown, Channing M., El Paso, Tex. Fishing line swivel. 2,448,954, Sept. 7.

Brno Arms Factory National Corporation, assignee: *See*— Koucký, Josef and F.

Brown Instrument Company, The, assignee: *See*— Burdick, Edwin C.

Browning, Leander, Greenwood, Ind. Trigger mechanism. 2,448,765, Sept. 7.

Bruce, William A., Tulsa, Okla., assignor to Standard Oil Development Company. Method and apparatus for measuring permeability. 2,448,955, Sept. 7.

Bucknam, James H., Cranford, N. J., assignor to The Linde Air Products Company. Fully automatic desurfacing control. 2,448,637, Sept. 7.

Burdick Corporation, The, assignee: *See*— Maxson, Rolland H.

Burdick, Edwin C., assignor to The Brown Instrument Company, Philadelphia, Pa. Electrical instrument follow-up systems. 2,448,575, Sept. 7.

Burke, Vincent D., South Haven, assignor to Abbott-Becker Distributing & Manufacturing, Kalamazoo, Mich. Connector for electric cables and the like. 2,448,766, Sept. 7.

Burkhard, Charles A.: *See*— Sprung, Murray M., and Burkhard.

Burman & Sons Limited, assignee: *See*— Briggs, Walter H.

Butler, William F., Hillside, N. J., assignor to American Can Company, New York, N. Y. Heat-treating machine. 2,448,514, Sept. 7.

C. H. C. Patent Corporation, assignee: *See*— Harkness, Travis O.

California Institute Research Foundation, assignee: *See*— Green, Alex E. S.

Campani, Louis M.: *See*— DeGiers, Clarence A., and Campani.

Capita, Emil R., North Bergen, N. J. Spark gap device. 2,448,576, Sept. 7.

Carbide and Carbon Chemical Corporation, assignee: *See*— Fife, Harvey R., and Roberts.

Carey, Claude H., Rush Township, Schuylkill County, Pa., assignor to Atlas Powder Company, Wilmington, Del. Making explosive assemblies. 2,448,658, Sept. 7.

Carlson, Warner W., assignor to Mellon Institute of Industrial Research, Pittsburgh, Pa. Hydroxyethylation. 2,448,767, Sept. 7.

Carnegie-Illinois Steel Corporation, assignee: *See*— Schefe, Frederick K.

Carney, Thomas P.: *See*— McElvain, Samuel M., and Carney.

Carroll, Burt H., and C. J. Staud, assignors to Eastman Kodak Company, Rochester, N. Y. Optically supersensitized photographic silver halide emulsion. 2,448,858, Sept. 7.

Carroll, William B., Jr., Schoolfield, Va., assignor to Dan River Mills, Incorporated. Dyed cellulose ethers and dyeing of fabrics therewith. 2,448,515, Sept. 7.

Cashman, Robert J., Glenview, Ill., assignor to Northwestern University. Photocell of lead sulfide. 2,448,516, Sept. 7.

Cashman, Robert J., Glenview, Ill., assignor to Northwestern University. Photocell. 2,448,517, Sept. 7.

Cashman, Robert J., Glenview, Ill., assignor to Northwestern University. Photocell. 2,448,518, Sept. 7.

Cassel, Hans M., Plainfield, N. J. Method and apparatus for measuring surface tension. 2,448,768, Sept. 7.

Celanese Corporation of America, assignee: *See*— Balch, Ralph H., and McCormick.

Chace, W. M., Company, assignee: *See*— Alban, Clarence F.

Chamberlain, James M. W., Fairlawn, Ohio. Fluid-coupling assembly. 2,448,769, Sept. 7.

Champion, William J., La Grange, assignor to Ditto, Incorporated, Chicago, Ill. Device for winding hectograph rolls evenly. 2,448,659, Sept. 7.

Chanoux, Ferdinand, Elmhurst, Long Island, N. Y. Remote control light control device. 2,448,859, Sept. 7.

Cheesman, Richard D., assignor to Traylor Engineering & Mfg. Co., Allentown, Pa. Drier heating system. 2,448,770, Sept. 7.

Chemical Construction Corporation, assignee: *See*— Schideler, Pierre, and Davis.

Chiarotti, Anita: *See*— Chiarotti, Sesto, and A.

Chiarotti, Sesto and A., Royal Oak, Mich. Electric iron. 2,448,577, Sept. 7.

Chicago Forging and Manufacturing Company, assignee: *See*— Hynes, Dibrell P.

Chicago Pneumatic Tool Company, assignee: *See*— Fossum, Henry O.

Chicago Title and Trust Company, assignee: *See*— Sola, Joseph G.

Christaldi, Peter S., Upper Montclair, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Cathode-ray oscillograph circuit. 2,448,771, Sept. 7.

Christensen, Edmund J., Chicago, Ill. Electric portable stove. 2,448,956, Sept. 7.

Chrysler Corporation, assignee: *See*— Mauer, Edwin R.

Clarione, Joseph, Fitchburg, Mass. Knife having replaceable blades. 2,448,957, Sept. 7.

Clapp, Roy A., Minneapolis, Minn., assignor by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Intermittent film feed mechanism. 2,448,519, Sept. 7.

Clare, Carl P., and G. Weinreich, assignors to Cook Electric Company, Chicago, Ill. Differential relay. 2,448,772, Sept. 7.

Clark Equipment Company, assignee: *See*— Eaton, Ernest E.

Clark, George, Trenton, N. J. Bobbin marking mechanism. 2,448,773, Sept. 7.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Copolymers of halo allyl esters of carboxylic acids. 2,448,703, Sept. 7.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Diketo acrylates. 2,448,958, Sept. 7.

Coffin, Francis P., Jr., Schenectady, N. Y., and F. E. Bothwell, Boston, and P. D. Crout, Lexington, Mass., assignors by mesne assignments to the United States of America, as represented by the Secretary of the Navy. Smoothing servo. 2,449,035, Sept. 7.

Colgate-Palmolive-Peet Company, assignee: *See*— Ross, John.

Collins, Calhoun, assignor of one-half to T. M. Ryerson, Bakersfield, Calif. Adjustable reclining chair. 2,448,860, Sept. 7.

Colt, Ralph S., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose ester lithographic printing process. 2,448,861, Sept. 7.

Condon, Ernest E., Hermanville, Md. Tube cutter. 2,448,578, Sept. 7.

Conklin, Ray B., Buffalo, N. Y. Cargo-carrying airplane. 2,448,862, Sept. 7.

Conlan, David, assignor to Conlan Electric Corporation, Brooklyn, N. Y. Solenoid with plunger and latch. 2,448,959, Sept. 7.

Conlan, Electric Corporation, assignee: *See*— Conlan, David.

Conlon-Moore Corporation, assignee: *See*— Babcock, Henry H.

Connolly, Gerald C., Baton Rouge, La., assignor to Standard Oil Development Company. Making a hydrocarbon conversion catalyst. 2,448,960, Sept. 7.

Conrad, Leona M.: *See*— Brennan, Joseph B., and Conrad.

Cook Electric Company, assignee: *See*— Clare, Carl P., and Weinreich.

Cook, Martin L., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,448,774, Sept. 7.

Costa, Mannie F., Syracuse, assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y. Ice-cream dipper. 2,448,863, Sept. 7.

Coulson, Walter, Detroit, Mich. Chuck. 2,448,579, Sept. 7.

Craft, William S.: *See*— Given, Richard A., and Craft.

Crandall, Julian T., Ashaway, R. I., assignor to Ashaway Line & Twine Mfg. Co. Harpoon construction. 2,448,864, Sept. 7.

Crane, Dan S., assignor to R. B. Crane, Shelbyville, Ill. Honeycomb uncapper. 2,448,775, Sept. 7.

Crane, Robert B., assignee: *See*— Crane, Dan S.

Cranston, Albert E., Jr., Portland, Oreg. Machine for severing and driving corrugated fasteners. 2,448,801, Sept. 7.

Crise, George W., Columbus, Ohio. Thermostatic control and signaling device. 2,448,776, Sept. 7.

Crise, George W., Columbus, Ohio. Massaging apparatus. 2,448,777, Sept. 7.

Crise, George W., Columbus, Ohio. Automatic boat-steering mechanism. 2,448,778, Sept. 7.

Crise, George W., Columbus, Ohio. Switch mechanism for automatic stokers. 2,448,779, Sept. 7.

Crombach, Nicholas, San Francisco, Calif. Dental welding machine. 2,448,865, Sept. 7.

Crompton & Knowles Loom Works, assignee: *See*— Krukonis, Alexander C. Robb, Walter Y.

Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Diversity receiving system. 2,448,866, Sept. 7.

Crosby, William J., Waterbury, Conn. Easel frame. 2,448,580, Sept. 7.

Crout, Prescott D.: *See*— Coffin, Francis P., Jr., Bothwell, and Crout.

Croxall, Willard J., Bryn Athyn, and H. T. Neher, Bristol, assignors to Röhm & Haas Company, Philadelphia, Pa. Preparation of ether acetals. 2,448,660, Sept. 7.

Crumrine, Chester W., Irondequoit Township, Monroe County, assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y. Animal trap. 2,448,780, Sept. 7.

Cupery, Martin E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Esters. 2,448,520, Sept. 7.

Cupples, Homer L., Alexandria, Va., dedicated to the free use of the People in the territory of the United States. Preparing parasiticides containing aluminum hydroxide. 2,448,661, Sept. 7.

Curl, Alfred: *See*— Ambler, Joseph A., and Curl. Roberts, Earl J., Ambler, and Curl.

Curtis, Lester L., Newark, N. J., assignor to The McBee Company, Athens, Ohio. Key punch. 2,448,961, Sept. 7.

Dale, Frank D., Coldwater, Kans., assignor to Harry Ferguson, Inc., Dearborn, Mich. Power takeoff. 2,448,662, Sept. 7.

Daly, George F., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Record controlled machine. 2,448,781, Sept. 7.

Dan River Mills, Incorporated, assignee: *See*— Carroll, William B., Jr.

Darby, Douglas, assignee: *See*— Swain, Frank Edward.

Darden, Walter G., Houston, Tex. Bicycle handle bar and seat attachment. 2,448,867, Sept. 7.

D'Ardenne, Walter H., Jenkintown Manor, assignor to to Heintz Manufacturing Company, Philadelphia, Pa. Rocket stop assembly. 2,448,962, Sept. 7.

D'Assis-Fonseca, Evelyn Cecil Muschamp, assignor to The Bristol Aeroplane Company Limited, Bristol, England. Gun turret for aircraft. 2,448,704, Sept. 7.

Daven Company, assignee: *See*— Smith, John P., Jr.

Davis, Archibald H., Washington, D. C. Composite strand and fabric. 2,448,782, Sept. 7.

Davis, Charles P.: *See*— Schideler, Pierre, and Davis.

Davis, P. Malcolm, et al.: *See*— Van Derhoef, Henry E., and Davis.

Davis, Walter M., Jamaica Plain, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Recovering phthalic anhydride. 2,448,868, Sept. 7.

Dearborn Chemical Company, assignee: *See*— May, Henry E.

Decker, Erik: *See*— Wood, Frederic E., Glenger, Decker, and Sargisson.

De Giers, Clarence A., Forest Hills, and L. M. Campani, Freeport, assignors to The Liquidometer Corporation, Long Island City, N. Y. Electrical vernier type telemetric indicating system. 2,448,783, Sept. 7.

Denton, John J.: *See*— Parker, Robert P., and Denton.

De Pew, Chester C.: *See*— Gregory, Alfred T., and De Pew.

De Vry Corporation, assignee: *See*— Ress, Thomas I., and Lang.

Diamant, Fred J., New York, N. Y. Composite shoe platform. 2,448,663, Sept. 7.

Dicke, Robert H., Princeton, N. J. Detection of high-speed charged particles. 2,448,963, Sept. 7.

Dickey, Joseph B., Rochester, N. Y., and J. G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Trimethylenebenzomoropholine azo compounds. 2,448,869, Sept. 7.

Dickey, Joseph B., Rochester, N. Y., and J. G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Azo compounds containing a triazole nucleus. 2,448,870, Sept. 7.

Dickey, Joseph B., Rochester, N. Y., and J. G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Azo compounds containing a tetrahydroquinoline nucleus. 2,448,871, Sept. 7.

Dickinson, Horace, South Gate, Calif. Thermal-mechanical element. 2,448,784, Sept. 7.

Dietert, Harry W., Detroit, Mich. Apparatus for testing molding sand. 2,448,964, Sept. 7.

Disposable Bottle Corporation, assignee: *See*— Allen, Adda M.

Ditto, Incorporated, assignee: *See*— Champion, William J.

Dixon, Joseph, Crucible Company, assignee: *See*— Reid, John O.

Dobson, Jessica, Whickham, England. Trousers, shorts and the like. 2,448,705, Sept. 7.

Dolan, Loyd M., Fort Wayne, Ind., assignor to General Electric Company. Laminated core construction. 2,448,785, Sept. 7.

Donohue, Frank L.: *See*— Schneider, Gerhard G., and Donohue.

Douglas Aircraft Company, Inc., assignee: *See*— Adams, Harold W., and Wheelon. Reaser, Wilbur W., and Kerr. Van Dyke, Edward E., and Kerr.

Drayer, Donald H., Brookmont, Md. Automatic recording stadia instrument. 2,448,965, Sept. 7.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Beste, Harold E.
Christaldi, Peter S.
Goldsmith, Thomas T., Jr., and Mann.
Koch, Stanley J.
Mann, Estle R., and Goldsmith.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Alderson, Witty L., Jr.
Alles, Francis P.
Berry, Kenneth L.
Cupery, Martin E.
Fletcher, David A., and Renfrew.
Gentner, Edmund J.
Glick, Charles F.
Happoldt, William B., Jr., and Stockfleth.
Hoover, Fred W.
Langkammerer, Carl M.
McQueen, David M., and Weaver.
Peterson, James H.
Renfrew, Malcolm M.
Schulze, Ferdinand.
Walker, Isaac F.
Whitman, Gerald M.

Dwyer, Martin, Hewlett Bay Park, N. Y. Emergency signaling device. 2,448,521, Sept. 7.

Eastman Kodak Company, assignee: *See*—
Allen, Charles F. H., Wilson, and Frame.
Beguin, Albert E.
Brice, William L.
Carroll, Burt H., and Staud.
Colt, Ralph S.
Dickey, Joseph B., and McNally.
Fuerst, Carl C.
Kenyon, William O., and Unruh.
Lowe, Wesley G., and Tarkington.
Murray, Thomas F., Jr., and Sharrard.
Silberstein, George P.
Van Derhoef, Henry P., and Davis.
Weissberger, Arnold, Kibler, and Young.

Eastwood, Sylvander C.: *See*—
Simpson, Thomas P., and Eastwood.

Eaton, Ernest E., Berrien Springs, assignor to Clark Equipment Company, Buchanan, Mich. Transmission. 2,448,872, Sept. 7.

Edwards, Samuel H., Richmond, Calif. Valve. 2,448,706, Sept. 7.

Eggmann, Robert E., et al.: *See*—
Oakley, Thurman, Westenhaver, and Eggmann.

Electronic Tester of Gas Meters, Inc., assignee: *See*—
Oakley, Thurman, Westenhaver, and Eggmann.

Empire Electric Brake Company, assignee: *See*—
Ingres, Jeannot G.

Erb, George C., Forest Hills West, assignor to American Can Company, New York, N. Y. Can cover remover. 2,448,522, Sept. 7.

Erickson, Carl E., and F. L. Zufelt, assignors to Northfield Iron Company, Northfield, Minn. Feed trough. 2,448,707, Sept. 7.

Exline, Paul G.: *See*—
Pigott, Reginald J. S., and Exline.

Fair, Irvin E., Basking Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Testing circuits for piezoelectric crystals. 2,448,581, Sept. 7.

Fairchild Engine and Airplane Corporation, assignee: *See*—
Gregory, Alfred T., and De Pew.
Johnson, Halex.

Fairey Aviation Company, Limited, The, assignee: *See*—
Forsyth, Archibald G.

Fales, Elisha N., Washington, D. C. Control of vortex flow by pressure waves. 2,448,966, Sept. 7.

Faxon, Charles E., Republic, Wash. Confectionery forming mechanism. 2,448,786, Sept. 7.

Fedirko, John: *See*—
Robey, Richard F., Fedirko, and Barnett.

Fein, Martin L., Riverside, N. J., and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Phenoxyethyl lactate and a cellulose compound plasticized therewith. 2,448,873, Sept. 7.

Ferrel, Clyde B., San Francisco, Calif., assignor to Ferrel Industries, Inc., Reno, Nev. Apparatus for detecting and locating enemy vessels. 2,448,787, Sept. 7.

Ferrel Industries, Inc., assignee: *See*—
Ferrel, Clyde B.

Fibiger, Augustus F., Toledo, Ohio. Fish lure. 2,448,523, Sept. 7.

Fife, Harvey R., Mount Lebanon, Pa., and F. H. Roberts, Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Polyoxypropylene compounds. 2,448,664, Sept. 7.

Fike, Floyd M., Flagstaff, Ariz. Lamp guard. 2,448,582, Sept. 7.

Firth, Thos., & John Brown Limited, assignee: *See*—
Thorton, Alfred E.

Fischer, Albert M., assignor of forty per cent to J. E. Mistarz, Chicago, Ill. Method of and apparatus for processing yeast. 2,448,927, Sept. 7.

Fisher, Charles H.: *See*—
Fein, Martin L., and Fisher.

Fitzpatrick, W. J., Company, The, assignee: *See*—
Wagner, Harold H., and Magnus.

Fleck, Elmer E., Silver Spring, and R. K. Preston, Cumberland, Md., dedicated to the free use of the people in the territory of the United States. Low-temperature noncrystallizing DDT-alkylated naphthalene insecticide. 2,448,665, Sept. 7.

Fleshman, Grigsby J., Oak Hill, W. Va. Billiard cue tip file. 2,448,967, Sept. 7.

Fletcher, David A., Pompton Plains, and M. M. Renfrew, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyethylene-polyvinyl acetal composition. 2,448,666, Sept. 7.

Florida Frozen Fruits, Inc., assignee: *See*—
Holzcker, Richard.

Flygare, Carl G., and C. C. Alvord, assignors to Norton Company, Worcester, Mass. Hydraulically operated wheel feeding mechanism. 2,448,874, Sept. 7.

Ford, Eugene A., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Machine for sorting cards perforated in alphabetical code. 2,448,788, Sept. 7.

Ford Motor Company, assignee: *See*—
Pinardi, Charles P., and Brock.
Wharam, John J., and Loon.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, England. Supercharged multiple motor internal combustion unit for aircrafts. 2,448,789, Sept. 7.

Fosnot, Henry O., Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Valve for rock drills. 2,448,875, Sept. 7.

Foster, Jackson W., and L. E. McDaniel, assignors to Merck & Co., Inc., Rahway, N. J. Production of penicillin. 2,448,790, Sept. 7.

Foster, Jackson W., New York, N. Y., and L. E. McDaniel, assignors to Merck & Co., Inc., Rahway, N. J. Production of penicillin in cotton seed meal medium. 2,448,791, Sept. 7.

Fox, Alexander P., University City, assignor to Lincoln Engineering Company, St. Louis, Mo. Lubricant injector. 2,448,583, Sept. 7.

Ferguson, Harry, Inc., assignee: *See*—
Dale, Frank D.

Frame, Gordon F.: *See*—
Allen, Charles F. H., Wilson, and Frame.

Franck, George E., Riverside, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Control device. 2,448,968, Sept. 7.

Fraser, James, assignor to Speakman Company, Wilmington, Del. Showerhead. 2,448,792, Sept. 7.

Frederickson, Carl J., assignee, et al.: *See*—
Hart, Carl F.

French, Roy B., Superior, W. Va. Key retainer. 2,448,969, Sept. 7.

Frosch, Carl J., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cured polyester synthetic rubbers formed from disecondary glycols. 2,448,584, Sept. 7.

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. High-speed symmetrical opening photographic shutter. 2,448,876, Sept. 7.

Fuerst, Carl C., assignor to Eastman Kodak Company, Rochester, N. Y. Bulb exposure mechanism for camera shutters. 2,448,877, Sept. 7.

Fuller, Calvin S., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Organic peroxide-curable and organic peroxide-cured synthetic polyester rubbers. 2,448,585, Sept. 7.

Fuller, Frederick, Middletown, N. Y. Draftsman's compass. 2,448,878, Sept. 7.

Gainsley, Sheldon H., Minneapolis, Minn. Jig-saw puzzle and rack therefor. 2,448,667, Sept. 7.

Gamble, David E., assignor to Borg-Warner Corporation, Chicago, Ill. Friction clutch plate. 2,448,879, Sept. 7.

Gamble, David E., Tucson, Ariz., assignor to Borg-Warner Corporation, Chicago, Ill. Friction clutch plate. 2,448,880, Sept. 7.

Ganuchean, James J., assignor to Southern Shell Fish Company, Inc., New Orleans, La. Preserving tinned crustacean meat. 2,448,970, Sept. 7.

Gaylord Container Corporation, assignee: *See*—
Meinhardt, John W.

Geissler, Carl G., Alameda, Calif. Medical divider. 2,448,708, Sept. 7.

Geller, Max, Brooklyn, N. Y. Jointed mannequin doll. 2,448,668, Sept. 7.

General Electric Company, assignee: *See*—
Agnes, Maynard C.
Dolan, Loyd M.
Jones, Henry F.
Lewis, Thomas X.
Sprung, Murray M., and Burkhard.
Wright, James G. E., and Oliver.

Gentner, Edmund J., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Coated granular resin and process of making same. 2,448,524, Sept. 7.

Glenger, Fred: *See*—
Wood, Frederic E., Glenger, Decker, and Sargisson.

Gilbert, Lewis W., Bradford, Pa., assignor to F. Keiper, Rochester, and N. E. B. Gilbert, Seneca Falls, N. Y. Device to regulate depth of gasoline in the float chamber of a carburetor. 2,448,709, Sept. 7.

Gilbert, Nora E. B., assignee et al.: *See*—
Gilbert, Lewis W.

Gile, William A., Stoneham, Mass. Toolholder for lathes. 2,448,586, Sept. 7.

Given, Richard A., Lake Charles, La., and W. S. Craft, Elizabeth, N. J., assignors to Standard Oil Development Company. Stripping in butadiene extraction. 2,448,971, Sept. 7.

Gizara, Edward W., Amsterdam, N. Y. Internal-combustion engine (turbine type). 2,448,972, Sept. 7.

Glass, Paul, Chicago, Ill., assignor to Askania Regulatro Company. Rectifier fed motor system. 2,448,793, Sept. 7.

Glick, Charles F., New Brunswick, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements bearing a polyvinylpyridine sublayer, a layer containing a soluble boron compound and a silver halide synthetic hydroxyl polymer layer and their preparation. 2,448,525, Sept. 7.

Glynn, Edwin A., assignor to Super Mold Corporation of California, Lodi, Calif. Multiple jaw chuck. 2,448,881, Sept. 7.

Golden State Company, Ltd., assignee: *See*—
Peebles, David D., and Hensley.

Goldsmith, Thomas T., Jr.: *See*—
Mann, Estle R., and Goldsmith.

Goldsmith, Thomas T., Jr., Cedar Grove, and E. R. Mann, Upper Montclair, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Device for testing magnetic materials. 2,448,794, Sept. 7.

Graeske, William F., Clearwater, Fla. Vertically adjustable bookkeeper's table. 2,448,710, Sept. 7.

Graham Transmissions, Inc., assignee: *See*—
Jones, Lloyd E.

Grand Rapids Store Equipment Company, assignee: *See*—
Vanderveld, Anthony.

Grant, Charles H., assignee, et al.: *See*—
Lawler, Frank P.

Grecco, Louis P., Portland, Oreg. Divisible carton. 2,448,795, Sept. 7.

Gregory, Alfred T., Massapequa, and C. C. De Pew, assignors to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y. Dynamic damper support. 2,448,973, Sept. 7.

Green, Alex E. S., Flushing, N. Y., assignor to California Institute Research Foundation, Pasadena, Calif. Directionally sensitive firing error indication. 2,448,587, Sept. 7.

Green, Thomas F., Jr., Ormond Beach, Fla. Electric heater for tanks. 2,448,669, Sept. 7.

Greenberg, George, New York, N. Y. Suspending device. 2,448,588, Sept. 7.

Greenman, Leo S., Cleveland, Ohio. Window regulator for automobiles and the like. 2,448,796, Sept. 7.

Greenwald, Harold A.: *See*—
Price, Nathan C., and Greenwald.

Greffe, André, La Bathie, assignor to Societe d'Electro-Chimie, d'Electro-Metallurgie et des Acieries Electriques d'Ugine, Paris, France. Method for deironing chromium ore. 2,448,882, Sept. 7.

Grenby Manufacturing Company, The, assignee: *See*—
Nicholas, Andrew F.

Gross, Thomas A. O., Boston, assignor to Raytheon Manufacturing Company, Newton, Mass. Frequency discriminating circuits. 2,448,526, Sept. 7.

Grunfeld, Maximilien, Lyon, France; vested in the Attorney General of the United States. Manufacture of primary amines. 2,449,036, Sept. 7.

Gulf Research & Development Company, assignee: *See*—
Pigott, Reginald J. S., and Exline.

Gulick, Russell A., Lynnfield, Mass., assignor, by mesne assignments, to Stator Corporation. Double wall vessel. 2,448,589, Sept. 7.

Gunther, Roland E., Oceanside, N. Y. Apparatus for dispersing gases in liquids. 2,448,590, Sept. 7.

Gustin, Walter, Elsinore, Calif. Device for exercising and treating feet. 2,448,797, Sept. 7.

Guttmann, Eric S., Burbank, Calif., assignor to A. S., E. G., L. M., C. M., and L. Polan, Jr., a copartnership doing business as Zenith Optical Company, Huntington, W. Va. Microscope mounting with self-contained illuminator. 2,448,974, Sept. 7.

H-P-M Development Corporation, assignee: *See*—
MacMillin, Howard F., and Waldie.

Haberstump, Alfred H., assignor to The Murray Corporation of America, Detroit, Mich. Lavatory supporting bracket. 2,448,798, Sept. 7.

Hain, George M.: *See*—
Zisman, William A., and Hain.

Hale, Douglas A. S.: *See*—
Blazier, Charles R., and Hale.

Hall, Robert L., Thompsonville, Ill. Concrete post form. 2,448,883, Sept. 7.

Hall, Samuel G.: *See*—
Zwillinger, Max, and Hall.

Hallett, Elton C., assignor to Hallett Manufacturing Company, Inglewood, Calif. Dual filter and connection shield. 2,448,711, Sept. 7.

Hallett Manufacturing Company, assignee: *See*—
Hallett, Elton C.

Hamilton, Alfred E., Pittsburgh, Pa. Abrasive roll. 2,448,884, Sept. 7.

Hampshire, William J., Cygnet, Ohio. Controlling the operation of wing and tail-elements of an airplane. 2,448,712, Sept. 7.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Cold cathode electron discharge device and circuits therefor. 2,448,527, Sept. 7.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Radio listening buoy. 2,448,713, Sept. 7.

Happoldt, William B., Jr., Arlington, and A. Stockfleth, North Arlington, assignors to E. I. Du Pont de Nemours & Company, Wilmington, Del. Ethylene polymer compositions. 2,448,799, Sept. 7.

Harder, George W., Louisville, Ky. Boat loading device. 2,448,591, Sept. 7.

Hardman, Albert F., assignor to Wingfoot Corporation, Akron, Ohio. Dithio acid derivatives. 2,448,714, Sept. 7.

Harju, Walter A., Daly City, Calif. Window shade. 2,448,800, Sept. 7.

Harkness, Travis O., Shreveport, La., assignor, by mesne assignments, to C. H. C. Patent Corporation, Texarkana, Tex. Seismic exploration operations. 2,449,037, Sept. 7.

Hart, Carl F., assignor of one-third to C. J. Frederickson and one-third to P. J. Mueller, Miami, Fla. Plug connector. 2,448,592, Sept. 7.

Harris-Segbold Company, assignee: *See*—
Harrold, Charles W., and Meyer.

Harrold, Charles W., and H. F. Meyer, University Heights, Ohio, assignors to Harris-Seybold Company. Inker. 2,448,975, Sept. 7.

Harvel Corporation, The, assignee: *See*—
Harvey, Mortimer T.

Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Condensation products obtained from anacardic materials. 2,448,715, Sept. 7.

Heidenthal, Warren C., Middletown, assignor to American Brake Shoe Company, New York, N. Y. Rail lubricator. 2,448,670, Sept. 7.

Heiligmann, Randall G., Yeadon, assignor to The Atlantic Refining Company, Philadelphia, Pa. Polymerization of alpha alkyl styrenes. 2,448,976, Sept. 7.

Heintz Manufacturing Company, assignee: *See*—
D'Ardenne, Walter H.

Heising, Raymond A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Flash and blast reducer. 2,448,593, Sept. 7.

Hensley, Guy P.: *See*—
Peebles, David D., and Hensley.

Hercules Powder Company, assignee: *See*—
Rummelsburg, Alfred L.

Heuver, Herbert M., Dayton, Ohio. Wind tunnel balance. 2,448,528, Sept. 7.

Hillier, James, Cranbury, and R. F. Baker, Princeton, N. J., assignors to Radio Corporation of America. High resolution microscopy. 2,448,594, Sept. 7.

Hoekstra, Albert, San Antonio, Tex. Window lift and fastener. 2,448,977, Sept. 7.

Holbrook, Wallace, Los Angeles, Calif. Air heater having reverted expanding combustion chamber. 2,448,595, Sept. 7.

Hooven, Frederick J., Dayton, Ohio. Electric system to control impedances. 2,448,885, Sept. 7.

Hoover Company, The, assignee: *See*—
Stahl, Maurice D.

Hoover, Fred W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Mixture of hydrolyzed ethylene-vinyl ester copolymer and N-substituted polyamide. 2,448,978, Sept. 7.

Holzcker, Richard, Lake Wales, Fla., assignor to Florida Frozen Fruits, Inc. Method for concentrating aqueous suspensions and solutions. 2,448,802, Sept. 7.

Hopff, Heinrich, and W. Rapp, Ludwigshafen-on-Rhine, Germany; vested in the Attorney General of the United States. The production of β,β'-dicyano diethyl ether. 2,448,979, Sept. 7.

Hopkins, Robert K., assignor to The M. W. Kellogg Company, New York, N. Y. Electric furnace. 2,448,886, Sept. 7.

Hord, Paul E., Tebbetts, Mo. Frame structure for ventilating fans. 2,448,671, Sept. 7.

Hough, Richard L., Brantford, Ontario, Canada. Stem and socket combination. 2,448,980, Sept. 7.

Huckleberry, Harry M., Rodgers Forge, Md., assignor to Bendix Aviation Corporation, South Bend, Ind. Capacitor. 2,448,887, Sept. 7.

Hultquist, Martin E., Bound Brook, N. Y., assignor to American Cyanamid Company, New York, N. Y. Preparation of 3-substituted benzotetronic acid and salts thereof. 2,449,038, Sept. 7.

Hunter, James F., Tulsa, Okla. Nasal sprayer. 2,448,803, Sept. 7.

Hurd, George K., Toronto, Ontario, Canada. Hook attachment for ladders. 2,448,716, Sept. 7.

Huntley Manufacturing Company, assignee: *See*—
Paul, Frederick J.

Hutchinson, Harry M., assignor to C. H. Masland & Sons, Carlisle, Pa. Hunting and fishing garment. 2,448,804, Sept. 7.

Hydraulic Control Engineering Company, assignee: *See*— Kirkham, Hall.
Stephens, William T.

Hynes, Dibrell P., Evanston, assignor to Chicago Forging and Manufacturing Company, Chicago, Ill. Fitting. 2,448,888, Sept. 7.

I-T-E Circuit Breaker Company, assignee: *See*— Scott, William M., Jr.

Imm, Lewis W., Glendale, assignor to Librascope, Incorporated, Burbank, Calif. Flight computer. 2,448,596, Sept. 7.

Imperial Brass Manufacturing Company, The, assignee: *See*— Franck, George E.

Ingram, Bernard, Berkeley, Calif. Adjustable detent wrench for screw calks. 2,448,805, Sept. 7.

Ingres, Jeannot G., Richmond, Va., assignor to Empire Electric Brake Company, Newark, N. J. Booster brake mechanism. 2,448,981, Sept. 7.

International Business Machines Corporation, assignee: *See*— Armbruster, John W.
Daly, George F.
Ford, Eugene A.
Robbins, Joseph J., and Blakely.
Tholstrup, Henry L.

Jack & Heintz Precision Industries, Inc., assignee: *See*— Piskac, Yaro, and Smiley.

Jeffcock, Howard W., assignor to Morris Machine Works, Baldwinsville, N. Y. Sealing means for pumping apparatus. 2,448,717, Sept. 7.

Jefferson Electric Company, assignee: *See*— Rickmeyer, Ernst W.

Jensen, Theodore E., Albany, N. Y. Coin tray. 2,448,982, Sept. 7.

Johnson, Charles B., assignor to Rockwell Manufacturing Company, Pittsburgh, Pa. Valve stop collar. 2,448,529, Sept. 7.

Johnson, Halex, Jackson Heights, assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y. Engine cylinder. 2,448,983, Sept. 7.

Johnson, Nels, Lower Merion Township, Montgomery County, and W. E. Bradley, Swarthmore, assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Proximity fuse testing apparatus. 2,448,889, Sept. 7.

Johnson-March Corporation, The, assignee: *See*— Kleinicke, Werner E.

Johnston, William B., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Condensation products of polyhydroxy alkylamines with aldehydes. 2,448,890, Sept. 7.

Jolley, Duane L.: *See*— Jolley, Leland D. and D. L.

Jolley, Leland D. and D. L., Provo, Utah. Auto prowler alarm. 2,448,597, Sept. 7.

Jones, Henry F., Pittsfield, Mass., assignor to General Electric Company. Modified silicone compositions. 2,448,530, Sept. 7.

Jones, Lloyd E., assignor to Graham Transmissions Inc., Milwaukee, Wis. Variable-speed transmission. 2,448,598, Sept. 7.

Joyce, Asa W.: *See*— Scalera, Mario, and Joyce.

Kalva Corporation, The, assignee: *See*— Karnopp, Karl W.

Karnopp, Karl W., assignor to The Kalva Corporation, Waukegan, Ill. Suspending agent for beverages. 2,448,599, Sept. 7.

Katz, Harry P., Cleveland, Ohio. Forced draft air supply and control means for furnaces. 2,448,891, Sept. 7.

Keiper, Frank, assignee, et al.: *See*— Gilbert, Lewis W.

Keller, Spencer R., Handley, W. Va. Adjustable internal expansion grinder. 2,448,600, Sept. 7.

Kelley, Carl S., Bartlesville, Okla., assignor to Phillips Petroleum Company. Hydrocarbon alkylation process. 2,448,601, Sept. 7.

Kellogg, M. W., Company, assignee: *See*— Hopkins, Robert K.

Kenyon, William O., and C. C. Unruh, assignors to Eastman Kodak Company, Rochester, N. Y. Resinous copolymer of isopropenyl acetate. 2,448,531, Sept. 7.

Kenyon, William O., and E. C. Yackel, assignors to Eastman Kodak Company, Rochester, N. Y. Oxidation of cellulose. 2,448,892, Sept. 7.

Kepple, Ezra W., Greensburg, Pa. Chimney cap. 2,448,806. Sept. 7.

Kerr, Kingdon: *See*— Van Dyke, Edward E., and Kerr.

Kester, Ernest B., and H. M. Preusser, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture. Glycidyl esters. 2,448,602, Sept. 7.

Kevin, Thomas D., Oswego, Oreg., and P. B. Payne, Seattle, Wash. Sanitary container for brushes. 2,448,603, Sept. 7.

Kibler, Charles J.: *See*— Weisasberger, Arnold, Kibler, and Young.

Kimball, June W., Athens, Ohio. Fatten-the-pig savings bank. 2,448,807, Sept. 7.

Kirkham, Hall, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio. Automatic power position hold for control valves. 2,448,532, Sept. 7.

Kittredge, Arthur E., Audubon, N. J. Pressure system. 2,448,604, Sept. 7.

Kleinicke, Werner E., Manhasset, assignor to The Johnson-March Corporation, New York, N. Y. Composition for treating coal and the like. 2,448,605, Sept. 7.

Knauf, Harry V., Jr., Oaklyn, N. J., assignor to Radio Corporation of America. Art of winding odd-shape coils. 2,448,672, Sept. 7.

Koch, Stanley J., Clifton, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Contact terminal for vacuum tubes. 2,448,808, Sept. 7.

Kohl, William R., Glenview, Ill. Garment hanger. 2,448,673, Sept. 7.

Koningsberger, Carel, Delft, assignor to Rubber Stichting, Amsterdam, Netherlands. Process for preparing homogeneous partially chlorinated derivatives of rubber. 2,448,809, Sept. 7.

Koonz, Carl H.: *See*— Trelease, Richard D., and Koonz.

Koucký, František: *See*— Koucký, Josef.

Koucký, Josef and F., assignors of one-third to Zbrojovka Brno Narodni Podnik, also named Brno Arms Factory National Corporation, Prague, Czechoslovakia. Removable trigger housing group for firearms. 2,448,810, Sept. 7.

Koullcovitch, Maurice, assignor to Societe Genevoise D'Instruments De Physique, Geneva, Switzerland. Method of and device for producing pulses at the maximum or minimum of an electric impulse. 2,448,718, Sept. 7.

Kraus, Edmund, San Antonio, Tex. Awning. 2,448,984, Sept. 7.

Krukonis, Alexander C., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Hand wheel for looms. 2,448,811, Sept. 7.

Kuzmick, Joseph N., Clifton, and D. Bell, Fair Lawn, assignors to Raybestos-Manhattan, Inc., Passaic, N. J. Manufacture of abrasive products. 2,448,985, Sept. 7.

LFC Corporation, assignee: *See*— Crumrine, Chester W.

Ladwig, Walter C., Elmhurst, Ill. Comb decapper. 2,448,986, Sept. 7.

Lamar, Charles, Brooklyn, N. Y. Cap for flasks or the like. 2,448,893, Sept. 7.

Lang, John W., Jr.: *See*— Ress, Thomas I., and Lang.

Langkammerer, Carl M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthetic drying oils from a dithiol and divinylacetylene. 2,448,987, Sept. 7.

Langton, Bowen D.: *See*— Love, Homer, Britain, Langton, and R. E. and C. E. Van Gundy.

La Raus, Julius, Westport, Conn. Heating system. 2,448,988, Sept. 7.

Latchum, John W., Jr., Bartlesville, Okla., assignor to Phillips Petroleum Company. Removing noncombustibles for fuel gas. 2,448,719, Sept. 7.

Laurance, Harold W., Coulee Dam, Wash. Consistency meter. 2,448,533, Sept. 7.

Laus, Anthony J., Pittsburgh, Pa. Shopping bag handle. 2,448,894, Sept. 7.

Lawler, Frank P., Chicago, Ill., assignor of one-third to C. H. Grant, San Francisco, Calif., one-third to F. P. Lawler, Chicago, Ill., and one-third to P. J. Tyler, Oroville, Calif. Hoist. 2,448,674, Sept. 7.

Lawrence, John T., Inman, S. C. Collapsible house. 2,448,895, Sept. 7.

Leake, James M., Monroe, Mich. Engine rocker arm. 2,448,989, Sept. 7.

Lear, Incorporated, assignee: *See*— Schon, William K.

Lee, Harley C.: *See*— Mahoney, Charles H., Lee, Tarr, and Le Grand.

Leffingwell, Wallace B.: *See*— Weesner, Carl W., Leffingwell, Babylon, and Schell.

Le Grand, Pierre E.: *See*— Mahoney, Charles H., Lee, Tarr, and Le Grand.

Lemire, Joseph, assignor of fifty per cent to N. Boisvert, Drummondville, Quebec, Canada. Electric timing motor. 2,448,812, Sept. 7.

Leveira, Robert M., San Francisco, Calif. Rotatable stand for supporting cable-thimble vise vertically or horizontally. 2,448,535, Sept. 7.

Levine, Arthur O., Brooklyn, N. Y. Match package. 2,448,990, Sept. 7.

Levy, Charles, Paterson, N. J. Synthetic vanilla flavor. 2,448,896, Sept. 7.

Lewis, Thomas X., Rugby, England, assignor to General Electric Company. Power system. 2,448,813, Sept. 7.

Libby, Raymond L., Poundridge, assignor to American Cyanamid Company, New York, N. Y. Therapeutic composition. 2,449,039, Sept. 7.

Libertyville Textiles, Inc., assignee: *See*— Stahl, William F.
Walliser, Robert E.

Librascope, Incorporated, assignee: *See*— Imm, Lewis W.

Licata, Francis J., West Caldwell, assignor to Nopco Chemical Company, Harrison, N. J. Novel greases. 2,448,720, Sept. 7.

Licata, Francis J., West Caldwell, assignor to Nopco Chemical Company, Harrison, N. J. Aluminum soap greases. 2,448,721, Sept. 7.

Lichty, Joy G., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Production of N-isopropylmethacrylamide. 2,448,991, Sept. 7.

Lincoln Engineering Company, assignee: *See*— Fox, Alexander P.

Linde Air Products Company, The, assignee: *See*— Barnes, Malcolm H., and McCandless.
Bucknam, James H.

Line Material Company, assignee: *See*— Van Ryan, Anthony.

Linton, William C., Washington, D. C. Illuminated cover plate. 2,448,606, Sept. 7.

Liquidometer Corporation, The, assignee: *See*— DeGiers, Clarence A., and Campani.

Livingston, Stanley D., Freeport, N. Y. Surge generator. 2,448,897, Sept. 7.

Lockhart, Marshall L., Rutherford, N. J. Hypodermic needle. 2,448,898, Sept. 7.

Lockheed Aircraft Corporation, assignee: *See*— Bloomfield, John J.
Price, Nathan C.
Price, Nathan C., and Greenwald.

Loewe, Peter L., Kalamazoo, Mich. Control mechanism for a plurality of motors. 2,448,675, Sept. 7.

Logan, Robert C., Chowchilla, Calif. Fountain implement with pivotally mounted dual brush units. 2,448,607, Sept. 7.

Lomax, Clarence E., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Impulsing circuit including a preenergizing circuit for the impulsing relay. 2,448,608, Sept. 7.

Loon, Fred G.: *See*— Wharam, John J., and Loon.

Love, Homer, C. E. Britain, B. D. Langton, R. E. Van Gundy, Wichita, and C. E. Van Gundy, Valley Center, Kans. Propelling power unit for invalid wheel chairs. 2,448,992, Sept. 7.

Lowe, Wesley G., and R. G. Tarkington, assignors to Eastman Kodak Company, Rochester, N. Y. Sensitized photographic cellulose ester silver halide emulsion. 2,448,534, Sept. 7.

Lummus Company, The, assignee: *See*— Reed, Carl S., and Schutte.
Schutte, August H., and Reed.

Lutz, August: *See*— Scott, William W., and Lutz.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,448,536, Sept. 7.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,448,537, Sept. 7.

Maclay, William D.: *See*— McCready, Rolland M., Owens, and Maclay.

MacMillin, Howard F., and G. A. Waldie, Mount Gilead, Ohio, assignors to H-P-M Development Corporation. Method of injection molding. 2,448,676, Sept. 7.

Macro, Henry A., Sheridan, N. Y. Seedling planting device. 2,448,899, Sept. 7.

Magnus, Elmer G.: *See*— Wagner, Harold H., and Magnus.

Mahoney, Charles H., H. C. Lee, A. L. Tarr, and P. E. Le Grand, Boulder City, Nev., assignors, by mesne assignments, to Reconstruction Finance Corporation. Grain refining magnesium alloys. 2,448,993, Sept. 7.

Malin, Jay B.: *See*— Barber, Everett M., and Malin.

Mallory, Gerald D., assignor to Wingfoot Corporation, Akron, Ohio. Closure for an inflatable structure. 2,448,677, Sept. 7.

Malm, Frank S., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Composition comprising organic peroxide cured glycol-dicarboxylic acid polyester and red oxide of iron. 2,448,609, Sept. 7.

Mandolf, Henry I., San Diego, Calif. Spool lock for fishing reels. 2,448,610, Sept. 7.

Mann, Estle R.: *See*— Goldsmith, Thomas T., Jr., and Mann.

Mann, Estle R., Upper Montclair, and T. T. Goldsmith, Jr., Cedar Grove Township, Essex County, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Device for selecting metal pieces. 2,448,814, Sept. 7.

Mannheimer, David: *See*— Antony, Charles, Jr., and Mannheimer.

Martin, Gustav J., Philadelphia, and S. Avakian, Oreland, assignors to The National Drug Company, Philadelphia, Pa. 5-Benzimidazol derivatives of barbituric acid. 2,448,722, Sept. 7.

Martin, William S., Sand Springs, Okla. Magnetic bookmark. 2,448,611, Sept. 7.

Masland, C. H., & Sons, assignee: *See*— Hutchinson, Harry M.

Mason, John E., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo. Cyclic regulation of crystallizers. 2,448,538, Sept. 7.

Matthews, W. N., Corporation, assignee: *See*— Mosley, Carl E.

Mattocks, Edgar H., Chicago, Ill. Screw cover wrench. 2,448,815, Sept. 7.

Maurer, Edwin R., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Fluid coupling with centrifugal lockup means. 2,448,539, Sept. 7.

Maxson, Rolland H., assignor to The Burdick Corporation, Milton, Wis. Electrophysiotherapeutic apparatus. 2,448,540, Sept. 7.

Maxson, Rolland H., assignor to The Burdick Corporation, Milton, Wis. Electrophysiotherapeutic apparatus. 2,448,541, Sept. 7.

Maxson, W. L., Corporation, The, assignee: *See*— McLaren, Peter J.

May, Henry E., assignor to Dearborn Chemical Company, Chicago, Ill. Continuous blowoff valve for steam boilers. 2,448,816, Sept. 7.

Mayer, Michael, Cleveland, Ohio. Oven for heating asphalt tile and the like. 2,448,723, Sept. 7.

Mayo, Belmont P., Providence, R. I. Ticket holder. 2,448,900, Sept. 7.

McArthur, Warren, Bantam, Conn., assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Fastening device. 2,448,817, Sept. 7.

McBee Company, The, assignee: *See*— Curtis, Lester L.

McCandless, Edward: *See*— Barnes, Malcolm H., and McCandless.

McCarty, Lawrence J.: *See*— Wean, Lincoln E., and McCarty.

McClary, Archie W., Oakland, Calif. Welding rod holder. 2,448,994, Sept. 7.

McCorkhill, Jesse C., Xenia, Ohio. Impact screwdriver. 2,448,995, Sept. 7.

McCormick, Irma G.: *See*— Balch, Ralph H., and McCormick.

McCready, Rolland M., H. S. Owens, and W. D. Maclay, Berkeley, Calif., assignors to United States of America, as represented by the Secretary of Agriculture. Isolating low-methoxyl pectinic acids. 2,448,818, Sept. 7.

McCrory, Harrell S.: *See*— Arthur, Harry J., and McCrory.

McCulloch, Robert P., Fox Point, and J. L. Ryde, Milwaukee, Wis., assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Interengaging impeller rotary positive displacement blower. 2,448,901, Sept. 7.

McDaniel, Lloyd E.: *See*— Foster, Jackson W., and McDaniel.

McElvain, Samuel M., Madison, Wis., and T. P. Carney, Indianapolis, Ind. 3-(2'-methyl piperidino)-propyl-p-n butoxy benzoate and acid addition salts thereof. 2,448,996, Sept. 7.

McElvain, Samuel M., Madison, Wis., and T. P. Carney, Indianapolis, Ind. Piperidine propanol esters of phenyl acetic acid. 2,448,997, Sept. 7.

McElvain, Samuel M., Madison, Wis., and T. P. Carney, Indianapolis, Ind. 3-(2',6'-dimethylpiperidino)-propyl salicylate and acid addition salts thereof. 2,448,998, Sept. 7.

McFarland, Forest R., Huntington Woods, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle transmission and control mechanism therefor. 2,448,678, Sept. 7.

McGovney, Clarence L., Elizabeth, N. J. Nasal filter. 2,448,724, Sept. 7.

McKenzie, Wendell R., Claremont, assignor to Bank of America National Trust and Savings Association, Los Angeles, Calif. Nut lock construction. 2,448,902, Sept. 7.

McLaren, Peter J., assignor, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y. Aided tracking aiming mechanism. 2,448,612, Sept. 7.

McNally, James G.: *See*— Dickey, Joseph B., and McNally.

McQueen, David M., and E. C. Weaver, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements having antihalation layers composed of vinylpyridine polymers and antihalation materials. 2,448,542, Sept. 7.

Mead, Lawrence C., Turlock, Calif. Pipe wrench having a pivoted yoke carrying an adjustable jaw. 2,448,999, Sept. 7.

Meinhardt, John W., assignor to Gaylord Container Corporation, St. Louis, Mo. Knockdown tray stack. 2,448,679, Sept. 7.

Mellon Institute of Industrial Research, assignee: *See*— Carlson, Warner W.

Merck & Co., Inc., assignee: *See*— Foster, Jackson W., and McDaniel.

Merrill, Francis G., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetic detector. 2,448,613, Sept. 7.

Merrill, Oliver B., Amesbury, Mass. Core for closure frame trim elements. 2,449,000, Sept. 7.

Meyer, Henry F.: *See*— Harrold, Charles W., and Meyer.

Mikeska, Louis A., and E. Arundale, Westfield, N. J., assignors to Standard Oil Development Company. Production of 1,3-diols. 2,449,001, Sept. 7.

Miller, Raymond J., Detroit, Mich. Displacement type casting apparatus. 2,448,903, Sept. 7.

Milliner, Samuel A., Jacksonville, Fla. Device for practicing golf. 2,448,904, Sept. 7.

Minit-Man, Inc., assignee: *See*—
Rousseau, Leo J.

Mirus, Gilbert B., Akron, Ohio. Motor drive for brushes and the like. 2,448,614, Sept. 7.

Mistars, John E., assignee: *See*—
Fischer, Albert M.

Mitchell, William A. J., Appleton, Wis. Pocket-type tissue container. 2,448,819, Sept. 7.

Moffats Limited, assignee: *See*—
Smith, Elmore S.

Monsanto Chemical Company, assignee: *See*—
Davis, Walter M.

Moody, Lewis F., Princeton, N. J. Apparatus for regulating centrifugal machines. 2,449,002, Sept. 7.

Moore, James R., Rumson, N. J., assignor to the United States of America as represented by the Secretary of War. Circuit for periodically generating oscillations. 2,448,543, Sept. 7.

Moos, Anthony M., New York, and S. D. Upham, Pearl River, assignors by mesne assignments to American Cyanamid Company, New York, N. Y. Water-soluble esters of riboflavin and preparation of same. 2,449,003, Sept. 7.

Morrell, Charles E., Westfield, and O. C. Slotterbeck, Rahway, N. J., assignors to Standard Oil Development Company. Preparation of substituted styrenes. 2,449,004, Sept. 7.

Morris, Arthur, Los Angeles, Calif. Electrical socket and adapter. 2,448,725, Sept. 7.

Morris Machine Works, assignee: *See*—
Jeffcock, Howard W.

Morse, Brian B. K., Holyoke, Mass. Self-compensating gyro assembly. 2,448,905, Sept. 7.

Mortimer, Robert H.: *See*—
Winkler, De Loss E., and Mortimer.

Mosley, Carl E., Overland, assignor to W. N. Matthews Corporation, St. Louis, Mo. Switch. 2,448,615, Sept. 7.

Motycka, Arthur, Beaver, assignor to Pittsburgh Tube Company, Monaca, Pa. Pipe testing apparatus. 2,448,820, Sept. 7.

Mueller, Paul J., assignee, et al.: *See*—
Hart, Carl F.

Muller, Carl W., Osborn, Ohio. Automatic simulated two pointer glide path for ground training. 2,448,544, Sept. 7.

Munao, Carmelo C.: *See*—
Munao, Philip and C. C.

Munao, Philip and C. C., Brooklyn, N. Y. Artificial flame. 2,448,906, Sept. 7.

Murphy, John E., Denver, Colo. Bag holder. 2,448,821, Sept. 7.

Murray Corporation of America, The, assignee: *See*—
Haberstump, Alfred H.

Murray, Thomas F., Jr., and G. F. Sharrard, assignors to Eastman Kodak Company, Rochester, N. Y. Heat-sealing adhesive tape. 2,448,638, Sept. 7.

Myers, Robert P., and M. L. Speck, Baltimore, Md., assignors, by mesne assignments, to National Dairy Research Laboratories, Inc., New York, N. Y. Method of producing corn steep nutrient. 2,448,680, Sept. 7.

National Carbon Company, Inc., assignee: *See*—
Ramadanoff, Dimiter.

National Dairy Research Laboratories, Inc., assignee: *See*—
Myers, Robert P., and Speck.

National Drug Company, The, assignee: *See*—
Martin, Gustav J., and Avakian.

National Union Radio Corporation, assignee: *See*—
Schneider, Gerhard G., and Donohue.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Coffin, Francis P., Jr., Bothwell, and Crout.

Neher, Harry T.: *See*—
Croxall, Willard J., and Neher.

Nelson, Clifford H., Tujunga, Calif. Shoulder pad filler garment hanger. 2,448,726, Sept. 7.

Nicholas, Andrew J., North Haven, assignor to The Grenby Manufacturing Company, Plainville, Conn. Shipping container refrigerated by Dry Ice. 2,449,005, Sept. 7.

Nopco Chemical Company, assignee: *See*—
Licata, Francis J.

Northfield Iron Company, assignee: *See*—
Erickson, Carl E., and Zufelt.

Northwestern University, assignee: *See*—
Cashman, Robert J.

Norton Company, assignee: *See*—
Flygare, Carl G., and Alvord.
Sliven, Herbert A.

Nutter, Okey K., Jamaica, N. Y. Fish bite signal device. 2,448,681, Sept. 7.

N. V. Optische Industrie "De Oude Delft," assignee: *See*—
Bouwers, Albert.

Oakley, Thurman, Bellesville, and M. J. Westenhaver and R. E. Eggmann, East St. Louis, Ill., assignors to Electronic Tester of Gas Meters, Inc., St. Louis, Mo. Gas meter prover apparatus. 2,448,616, Sept. 7.

O'Daniel, John W., Newark, Del. Battle sled. 2,448,545, Sept. 7.

Oetzel, John G., assignor to Warner Electric Brake Manufacturing Company, Beloit, Wis. Solenoid with armature. 2,448,727, Sept. 7.

Omohundro, Arthur S., Temple City, Calif. Fishhook holder. 2,448,728, Sept. 7.

Ost, William R., Verona, N. J., assignor to Walworth Patents Inc., Boston, Mass. Pipe joint. 2,448,907, Sept. 7.

Owens, De Witt D., Crawfordsville, Iowa. Self-supporting, self-adjusting electric water heater. 2,448,617, Sept. 7.

Owens, Harry S.: *See*—
McCready, Rolland M., Owens, and Maclay.

Ozai-Durrani, Ataullah K., Stuttgart, Ark. Processing rice bran and rice polish. 2,448,729, Sept. 7.

Packard Motor Car Company, assignee: *See*—
McFarland, Forest R.

Pancotti, Roberto, Brooklyn, N. Y. Sound deflector for accordions. 2,448,682, Sept. 7.

Paraskevas, Louis, Washington, D. C. Skidless steel grip for auto tires. 2,448,730, Sept. 7.

Park, Arthur, Wheaton, Ill. Gripping means for game balls. 2,448,731, Sept. 7.

Parker, Louis W., Woodside, N. Y. Television receiver. 2,448,908, Sept. 7.

Parker, Robert P., Somerville, and J. J. Denton, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Alkenoxy amino diphenylamines. 2,449,006, Sept. 7.

Parks & Woolson Machine Co., assignee: *See*—
Richardson, Charles G.

Patrick, Joshua, Detroit, Mich. Trap. 2,448,618, Sept. 7.

Pattison, Arthur H., assignor to Arthur Pattison Limited, Coventry, England. Flexible drive coupling. 2,448,732, Sept. 7.

Pattison, Arthur, Limited, assignee: *See*—
Pattison, Arthur H.

Paul, Frederick J., Fredonia, assignor to Huntley Manufacturing Company, Brocton, N. Y. Method and apparatus for separating peanuts from debris. 2,449,007, Sept. 7.

Pavelle Color Incorporated, assignee: *See*—
Rabinowitz, Jacob.

Payne, John W.: *See*—
Simpson, Thomas P., and Payne, and Valas.

Payne, Paul B.: *See*—
Kevin, Thomas D., and Payne.

Pecker, Joseph S., and H. A. Simpson, Philadelphia, Pa.; said Simpson assignor to said Pecker. Forming pressed articles from powders. 2,449,008, Sept. 7.

Peebles, David D., Hillsborough, and G. P. Hensley, assignors to Golden State Company, Ltd., San Francisco, Calif. Powder filling apparatus. 2,448,733, Sept. 7.

People in the territory of the United States, Dedicated to the free use of the: *See*—
Cupples, Homer L.
Fleck, Almer E., and Preston.

Permanente Metals Corporation, The, assignee: *See*—
Van Loenen, William F.

Peters, Carl, St. Louis, Mo. Muffler. 2,449,009, Sept. 7.

Peterson, James H., Oak Ridge, Tenn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Titanium oxide production. 2,448,683, Sept. 7.

Petrino, Sebastian A. Brooklyn N. Y. De-emulsification of water gas tar emulsions and oil gas tar emulsions. 2,448,684. Sept. 7.

Philco Corporation, assignee: *See*—
Johnson, Nels, and Bradley.

Phillips Petroleum Company, assignee: *See*—
Kelley, Carl S.
Latchum, John W., Jr.
Reading, George R., and Vinyard.

Phillips, Raymond L., Minneapolis, Minn. Bookholder for bedsteads. 2,448,734, Sept. 7.

Pigott, Reginald J S., Pittsburgh, and P. G. Exline, Penn Township, Allegheny County, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for measuring force exerted by a resilient annulus. 2,448,735, Sept. 7.

Pinardi, Charles P., Dearborn, and H. L. Brock, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Power take-off drive unit. 2,448,822, Sept. 7.

Piskac, Yaro, and R. E. Smiley, Maple Heights, assignors by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Method of removing insulation from metallic electric conductors. 2,448,909, Sept. 7.

Pittsburgh Tube Company, assignee: *See*—
Motycka, Arthur.

Plemel, Lawrence M., and B. J. Abernathy, Jr., United States Navy. Portable recompression chamber. 2,448,546, Sept. 7.

Polan, Albert S., assignee, et al.: *See*—
Guttmann, Eric S.

Polan, Charles M., assignee, et al.: *See*—
Guttmann, Eric S.

Polan, E. G., assignee, et al.: *See*—
Guttmann, Eric S.

Polan, L. M., assignee, et al.: *See*—
Guttmann, Eric S.

Polan, Lake, Jr., assignee, et al.: *See*—
Guttmann, Eric S.

Popkin, Alexander H., Bronx, N. Y., assignor to Sun Chemical Corporation. Tribiphenolmethane dyestuff and and pigment dyestuffs and making the same. 2,448,823, Sept. 7.

Postal Advertising Corporation, assignee: *See*—
Zacharias, Erhard.

Pratt, Edward L., Pekin, Ill. Automatic electromagnetic automoblie door emergency latch. 2,448,619, Sept. 7.

Preston, Robert K.: *See*—
Fleck, Elmer E., and Preston.

Preusser, Henry M.: *See*—
Kester, Ernest B., and Preusser.

Price, Nathan C., Hollywood, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Rotary turbine-type hydraulic coupling. 2,448,824, Sept. 7.

Price, Nathan C., and H. A. Greenwald, Hollywood, assignors to Lockheed Aircraft Corporation, Burbank, Calif. Turbine rotor. 2,448,825, Sept. 7.

Purdy, George W., Laurelton, N. Y. Coupling for rods, cables, and the like. 2,448,547, Sept. 7.

Purdy, George W., Laurelton, N. Y. Coupling. 2,448,548, Sept. 7.

Rabinowitz, Jacob, Brooklyn, assignor to Pavelle Color Incorporated, New York, N. Y. Photographic shutter operating and control mechanism. 2,448,736, Sept. 7.

Radio Corporation of America, assignee: *See*—
Crosby, Murray G.
Hansell, Clarence W.
Hillier, James and Baker.
Knauf, Harry V., Jr.
Smith, James E.

Ramadanoff, Dimiter, Cleveland, Ohio, assignor to National Carbon Company, Inc. Electrical contact brush. 2,448,685, Sept. 7.

Rapp, Wilhelm: *See*—
Hopff, Heinrich, and Rapp.

Raybestos-Manhattan, Inc.: *See*—
Kuzmick, Joseph N., and Bell.

Raytheon Manufacturing Company, assignee: *See*—
Gross, Thomas A. O.
Stutsman, Paul W.

Reading, George R., and R. E. Vinyard, Phillips, Tex., assignors to Phillips Petroleum Company. Recovery of hydrogen fluoride by distillation with an olefin. 2,448,620, Sept. 7.

Reamer, Thomas E., Albany, assignor to Shell Development Company, San Francisco, Calif. Chlorinated paraffin wax amines for controlling fungi and bacteria. 2,448,910, Sept. 7.

Reaser, Wilbar W., Pacific Palisades, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Aircraft heating and deicing system. 2,448,826, Sept. 7.

Reconstruction Finance Corporation, assignee: *See*—
Mahoney, Charles H., Lee, and Tarr, and Le Grand, McArthur, Warren.

Reder, Emil E., Jr., Chicago, Ill. Sectional match plate. 2,448,827, Sept. 7.

Reed, Carl S.: *See*—
Schutte, August H., and Reed.

Reed, Carl S., New York, and A. H. Schutte, Tuckahoe, assignors to The Lummus Company, New York, N. Y. Apparatus for catalytic conversion of hydrocarbon vapors. 2,448,549, Sept. 7.

Reed, Carl S., New York, and A. H. Schutte, Hastings on Hudson, assignors to The Lummus Company, New York, N. Y. Heat recovery system for catalytic conversion processes. 2,448,550, Sept. 7.

Reid, John O., assignor to Joseph Dixon Crucible Company, Jersey City, N. J. Stopper press die. 2,448,911, Sept. 7.

Reisenweber, William F., Newark, S. Dak. Combine harvester and straw buncher. 2,448,737, Sept. 7.

Renfrew, Malcolm M.: *See*—
Fletcher, David A., and Renfrew.

Renfrew, Malcolm M., Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photopolymerization. 2,448,828, Sept. 7.

Ress, Thomas I., and J. W. Lang, Jr., assignors to De Vry Corporation, Chicago, Ill. Overrunning clutch. 2,448,912, Sept. 7.

Rice, William J., Brooklyn, N. Y. Composition containing talloil resins. 2,448,621, Sept. 7.

Richard, Bernard O., Hillsdale, assignor to Allied Products Corporation, Detroit, Mich. Chuck or workholder. 2,448,738, Sept. 7.

Richardson, Charles G., assignor to Parks & Woolson Machine Co., Springfield, Vt. Loop cutting mechanism. 2,448,686, Sept. 7.

Rickmeyer, Ernst W., Berkeley, assignor to Jefferson Electric Company, Bellwood, Ill. Liquid and gas transfer in mercury switches. 2,448,687, Sept. 7.

Riggs, Herbert F.: *See*—
Solliday, Raymond E., and Riggs.

Rizer, Floyd R., Detroit, Mich. Lighting torch. 2,448,622, Sept. 7.

Robb, Walter Y., Whitinsville, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Tuft cutting mechanism for Axminster looms. 2,448,829, Sept. 7.

Robbins, Joseph J., New York, and R. T. Blakely, Amityville, assignors to International Business Machines Corporation, New York N. Y. Record sensing and comparing means. 2,448,830, Sept. 7.

Roberts, Earl J., and J. A. Ambler, New Orleans, La., and A. L. Curl, Winter Haven, Fla., assignors to the United States of America as represented by the Secretary of Agriculture. Production of itaconic acid. 2,448,831, Sept. 7.

Roberts, Frederick H.: *See*—
Fife, Harvey R., and Roberts.

Roberts, John, San Francisco, Calif. Valve. 2,448,913, Sept. 7.

Robertshaw-Fulton Controls Company, assignee: *See*—
Weber, Victor.

Robey, Richard F., Cranford, J. Fedirko, Elizabeth, and A. E. Barnett, Westfield, N. J., assignors to Standard Oil Development Company. Stabilizing hydrocarbons. 2,449,010, Sept. 7.

Rockwell Manufacturing Company, assignee: *See*—
Johnson, Charles B.

Röhm & Haas Company, assignee: *See*—
Croxall, Willard J., and Neher.

Rose, Charles F. P., Asbury Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Duplex switch with leakage compensation. 2,448,623, Sept. 7.

Ross, Donald S., Moclips, Wash. Pin anchored electric outlet and switch. 2,448,832, Sept. 7.

Ross, John, Ramsey, assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Bromination of unsaturated organic compounds. 2,448,739, Sept. 7.

Roth, Fred, Brooklyn, N. Y. Cigarette ejecting device. 2,448,914, Sept. 7.

Rousseau, Leo J., Grosse Pointe, assignor, by mesne assignments, to Minit-Man, Inc., Detroit, Mich. Motor vehicle drying apparatus. 2,448,834, Sept. 7.

Royer, Marcel, St. Eustache sur le Lac, Quebec, Canada. Apparatus for mounting a roller in a cavity in a member. 2,448,833, Sept. 7.

Rubber Stichting, assignee: *See*—
Koningsberger, Carel.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Foundry core or mold and making same. 2,448,624, Sept. 7.

Ryde, John L.: *See*—
McCulloch, Robert P., and Ryde.

Ryerson, Theodore M., assignee: *See*—
Collins, Calhoun.

Ryther, Thomas W., St. Louis, Mo. Combination salt-and-pepper shaker. 2,448,625, Sept. 7.

Sargent & Company, assignee: *See*—
Shaw, Herbert G.

Sargisson, Robert L.: *See*—
Wood, Fredric E., Glenger, Decker, and Sargisson.

Scalera, Mario, Somerville, and A. W. Joyce, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Producing acylamino dianthrimide acridones. 2,449,011, Sept. 11.

Schaeffer, Benjamin B., Upper Darby, Pa., assignor to United States of America as represented by the Secretary of Agriculture. Alkylol amine salts of hydroxy fatty acids and process for their preparation. 2,448,626, Sept. 7.

Schaffner, Claude, New Haven, Conn. Dress pattern marker. 2,448,627, Sept. 7.

Schaller, Leo N., Corning, N. Y. Paint can hanger. 2,448,628, Sept. 7.

Schefe, Frederick K., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Apparatus for continuously processing strips. 2,448,835, Sept. 7.

Schelwer, Albert T., Erie, Pa. Coupling. 2,448,688, Sept. 7.

Schell, Homer L.: *See*—
Weesner, Carl W., Lemingwell, Babylon, and Schell.

Schideler, Pierre, New York, N. Y., and C. P. Davis, Stamford, Conn., assignors to Chemical Construction Corporation, New York, N. Y. Manufacture of hexamethylene tetramine. 2,449,040, Sept. 7.

Schley, Thomas E., Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Pipe exchanger scraper. 2,449,012, Sept. 7.

Schmid, Arthur W., Brookside Farm, Pa. Apparatus for feeding glass. 2,448,915, Sept. 7.

Schmidt, Benjamin F., Los Angeles, Calif. Knife sharpener. 2,448,629, Sept. 7.

Schneider, Gerhard G., and F. L. Donohue, Maplewood, assignors to National Union Radio Corporation, Newark, N. J. Heater folding machine. 2,448,916, Sept. 7.

Schnyder, Auxilius P., Teaneck, N. J. Debarking apparatus. 2,448,689, Sept. 7.

Schon, William K., assignor to Lear Incorporated, Piqua, Ohio. Universal coupling for linear actuators. 2,448,917, Sept. 7.

Schonfeld, Simon C., Youngstown, Ohio. Combined mirror and cabinet. 2,448,836, Sept. 7.

Schroeder, Simon E., assignor to Barlow & Seelig Manufacturing Company, Ripon, Wis. Grinding machine. 2,448,551, Sept. 7.

Schulze, Ferdinand, Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements having light-sensitive and water-insoluble vinylpyridine polymer layers. 2,448,552, Sept. 7.

Schutte, August H.: *See*—
Reed, Carl S., and Schutte.

Schutte, August H., Hastings-on-Hudson, and C. S. Reed, assignors to The Lummus Company, New York, N. Y. Process for recycling catalyst fines in a catalyst conversion system. 2,448,553, Sept. 7.

Schutz, Robert R., Roseville, Calif. Fruit picking tower. 2,448,630, Sept. 7.

Schwartz, Fernand F., Santiago, Chile. Preparing stable colloidal solutions of metal sulfides. 2,448,740, Sept. 7.

Scott, William M., Jr., Bryn Mawr, assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa. Circuit breaker-hold-in mechanism. 2,449,013, Sept. 7.

Scott, William W., and A. Lutz, Chicago, Ill., assignors to American Cystoscope Makers, Inc. Endoscopic surgical instrument. 2,448,741, Sept. 7.

Selak, Frank L., Albia, Iowa. Power hay buck. 2,448,631, Sept. 7.

Sessions, Frank L., Lakewood, Ohio. Pellet container and selector. 2,448,918, Sept. 7.

Shaffer, Stewart, Muncie, Ind., assignor to Ball Brothers Company. Container closure. 2,449,014, Sept. 7.

Sharon Steel Corporation, assignee: *See*—
Weesner, Carl W., Leffingwell, Babylon, and Schell.

Sharples Chemicals Inc., assignee: *See*—
Barham, Harold N.

Sharrard, George F.: *See*—
Murray, Thomas F., Jr., and Sharrard.

Shaw, Herbert G., Derby, assignor to Sargent & Company, New Haven, Conn. Rabbet plane. 2,449,015, Sept. 7.

Sheffield Corporation, The, assignee: *See*—
Aller, Willis F.

Shell Development Company, assignee: *See*—
Reamer, Thomas E.
Winkler, De Loss E., and Mortimer.

Shulman, Louis, New York, N. Y. Strapless brassière. 2,448,919, Sept. 7.

Shurts, Wilbur F.: *See*—
Black, James B., and Shurts.

Siberts, Carl E., Jackson, Miss. Baseball game. 2,448,837, Sept. 7.

Silberstein, George P., assignor to Eastman Kodak Company, Rochester, N. Y. Collapsible view finder. 2,448,920, Sept. 7.

Sliven, Herbert A., assignor to Norton Company, Worcester, Mass. Hydraulically operated feeding mechanism. 2,448,921, Sept. 7.

Simopoulos, Nicholas T., Dayton, Ohio. Ultra high frequency tuning unit. 2,448,554, Sept. 7.

Simpson, Henry A.: *See*—
Pecker, Joseph S., and Simpson.

Simpson, Thomas P., and S. C. Eastwood, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Continuous cracking process. 2,448,922, Sept. 7.

Simpson, Thomas P., J. W. Payne, and P. D. Valas, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Activation of petroleum adsorbents. 2,449,016, Sept. 7.

Skolnik, Max, Chicago, Ill. Casket and making the same. 2,448,923, Sept. 7.

Slotterbeck, Ober C.: *See*—
Morrell, Charles E., and Slotterbeck.

Smiler, Jacob M., Philadelphia, Pa. Hassock. 2,449,017, Sept. 7.

Smiley, Raymond E.: *See*—
Piskac, Yaro, and Smiley.

Smith, Arthur E., Darling Point, Sidney, New South Wales, Australia. Suction mold. 2,448,632, Sept. 7.

Smith, Charles C., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Insulated electrical conductor. 2,448,633, Sept. 7.

Smith, Clarence C., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,449,018, Sept. 7.

Smith, Elmore S., assignor to Moffats Limited, Weston, Ontario, Canada. Electric heating apparatus. 2,448,634, Sept. 7.

Smith, James E., Jackson Heights, N. Y., assignor to Radio Corporation of America. Echo reducing circuit for television receivers. 2,448,635, Sept. 7.

Smith, John P., Verona, assignor to Daven Company, Newark, N. J. Attenuator. 2,449,019, Sept. 7.

Smith, Warren R., Crown Point, N. Y. Bed rest. 2,448,924, Sept. 7.

Smith-Clarke, George T., and A. F. Varney, assignors to Alvis Limited, Coventry, England. Built-up crankshaft. 2,448,742, Sept. 7.

Societe D'Electro-Chimi, D'Electro-Metallurgie et des Acieries Electriques d'Ugine, assignee: *See*—
Greffe, André.

Societe Genevoise D'Instruments De Physique, assignee: *See*—
Koulicovitch, Maurice.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Schley, Thomas E.
Simpson, Thomas P., and Eastwood.
Simpson, Thomas P., Payne, and Valas.

Sohnlein, Fred W., assignor of one-half to G. M. Bowman, San Diego, Calif. Closure for containers. 2,448,838, Sept. 7.

Sola, Joseph G., River Forest, assignor, by mesne assignments, to Chicago Title and Trust Company, Chicago, Ill. Motor system using voltage regulating transformer. 2,448,925, Sept. 7.

Solliday, Raymond E., and H. E. Riggs, assignors to Wingfoot Corporation, Akron, Ohio. Cord processing apparatus. 2,448,743, Sept. 7.

Sorensen, Edward M., deceased, Dayton, Ohio; H. S. Sorensen, administratrix. Automatic radio range control for flight trainers. 2,448,555, Sept. 7.

Sorensen, Helen S., administratrix: *See*—
Sorensen, Edward M.

Southern Shell Fish Company, Inc., assignee: *See*—
Ganucheau, James J.

Speakman Company, assignee: *See*—
Fraser, James.

Speck, Marvin L.: *See*—
Myers, Robert P., and Speck.

Sperry Corporation, The, assignee: *See*—
Antony, Charles, Jr., and Mannheimer.
Wilkerson, Jefferson R.

Spraragen, Louis, assignor to Automatic Locking Devices, Incorporated, Bridgeport, Conn. Power drive. 2,449,020, Sept. 7.

Sprung, Murray M., Scotia, and C. A. Burkhard, Alplaus, N. Y., assignors to General Electric Company. Synthetic elastic and elastomeric products. 2,448,556, Sept. 7.

Stack, Emmet G., Marshfield, Oreg. Prefabricated double wall structure. 2,448,926, Sept. 7.

Stahl, Maurice D., assignor to The Hoover Company, North Canton, Ohio. Dynamoelectric machine. 2,449,021, Sept. 7.

Stahl, William F., Kenilworth, assignor to Libertyville Textiles, Inc., Libertyville, Ill. Rug. 2,448,928, Sept. 7.

Stalker, Edward A., Bay City, Mich. Fuel system for aircraft power plants for aircraft propulsion and boundary layer air control. 2,449,022, Sept. 7.

Standard Oil Development Company, assignee: *See*—
Bruce, William A.
Connolly, Gerald C.
Given, Richard A., and Craft.
Mikeska, Louis A., and Arundale.
Morrell, Charles E., and Slotterbeck.
Robey, Richard F., Fedriko, and Barnett.
Van Gilder, Carll F.
Voorhies, Alexis, Jr.

Stator Corporation, assignee: *See*—
Gulick, Russell A.

Staud, Cyril J.: *See*—
Carroll, Burt H., and Staud.

Stearns-Roger Manufacturing Company, The, assignee: *See*—
Mason, John E.

Steigerwald, Libera L., Chicago, Ill. Strap extender. 2,448,839, Sept. 7.

Stephens, William T., Painesville, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio. Control valve with operating position hold. 2,448,557, Sept. 7.

Stewart, Byron, Columbus, Ohio. Dental amalgamator. 2,448,840, Sept. 7.

Stockfleth, Alfred: *See*—
Happoldt, William B., Jr., and Stockfleth.

Stockstiel, Clinton L., assignee: *See*—
Zidbeck, Ernest E.

Stodola, Edwin K., Neptune, N. J. Modulation networks. 2,448,558, Sept. 7.

Stokes, Edward A., assignor to Vokes Limited, Guildford, England. Porous filter. 2,448,930, Sept. 7.

Storm, Herbert F., West Allis, Wis., assignor to Sunbeam Corporation. Apparatus for bonding wear-resistant facing elements to machine elements. 2,448,690, Sept. 7.

Struckmann, Holger, Riverside, Calif. Conveying pulverized material. 2,448,745, Sept. 7.

Strader, Spencer R., Hanford, Calif. Tractor-trailer coupling device. 2,448,744, Sept. 7.

Stutsman, Paul W., Needham, assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass. Electron discharge tube. 2,448,559, Sept. 7.

Sun Chemical Corporation, assignee: *See*—
Popkin, Alexander H.

Sunbeam Corporation, assignee: *See*—
Storm, Herbert F.

Sundeen, Ray A., Valparaiso, Ind. Adjustable scaffold. 2,448,746, Sept. 7.

Super Mold Corporation of California, assignee: *See*—
Glynn, Edwin A.

Surk, Frank J., Menominee, Mich. Cable splicing vise. 2,448,636, Sept. 7.

Swain, Frank E., Ewell, assignor of one-half to D. Darby, Northwood, Middlesex, England. Pipe coupling. 2,448,747, Sept. 7.

Swanson, Carl O., Minneapolis, Minn. Self-cleaning door mat. 2,448,931, Sept. 7.

Swanson, Ethel, assignee: *See*—
Swanson, Eva C.

Swanson, Eva C., assignor to E. Swanson, Detroit, Mich. Drapery hook. 2,448,637, Sept. 7.

Swift and Company, assignee: *See*—
Trelease, Richard D., and Konnz.

Tarkington, Raife G.: *See*—
Lowe, Wesley G., and Tarkington.

Tarr, Allan L.: *See*—
Mahoney, Charles H., Lee, Tarr, and Le Grand.

Taylor, Ellen G., Miami, Fla. Electric switch. 2,448,841, Sept. 7.

Taylor, Frank W., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Cinematographic method and apparatus. 2,448,691, Sept. 7.

Technicolor Motion Picture Corporation, assignee: *See*—
Taylor, Frank W.

Tector, Macy O., New Castle, Ind. Magnetic block. 2,448,692, Sept. 7.

Texas Company, The, assignee: *See*—
Barber, Everett M., and Malin.

Thayer Company, assignee: *See*—
Troendle, William C.

Theowick Company, assignee: *See*—
Wickwire, Theodore H., Jr.

Thulstrup, Henry L., Rochester, assignor to International Business Machines Corporation, New York, N. Y. Record-controlled printing apparatus. 2,448,842, Sept. 7.

Thomas, Charles M., St. Louis, Mo. Piston device. 2,448,932, Sept. 7.

Thomas, Henry E., Vallejo, Calif. Automatic power factor controller. 2,448,843. Sept. 7.

Thomas, Percival E., assignor to Sterling Industries Limited, London, England. Change-over mechanism for fluid-flow systems. 2,448,933, Sept. 7.

Thoreson, Theodore, Wausaw, Wis. Collar clasp. 2,448,845, Sept. 7.

Thornton, Alfred E., assignor to Thos. Firth & John Brown Limited, Sheffield, England. Austenitic alloy steels. 2,449,023, Sept. 7.

Throsel, Harry E., Waukegan, Ill. Engine starting device. 2,448,844, Sept. 7.

Tide Water Associated Oil Company, assignee: *See*—
Zellner, Carl N.

Timken Roller Bearing Company, The, assignee: *See*—
Bowen, Cedric A.

Traylor Engineering & Mfg. Co., assignee: *See*—
Cheesman, Richard D.

Trelease, Richard D., and C. H. Koons, assignors to Swift and Company, Chicago, Ill. Eviscerating method and apparatus. 2,448,693, Sept. 7.

Trochim, Marie L., Portland, Oreg. Liquid dispensing device. 2,448,846, Sept. 7.

Troendle, William C., assignor to Thayer Company, Gardner, Mass. Safety stand. 2,449,024, Sept. 7.

Trojan Powder Company, assignee: *See*—
Wyler, Joseph A.

Turner, William R., Drexel Hill, assignor to The Atlantic Refining Company, Philadelphia, Pa. Rust-inhibiting lubricant. 2,449,025, Sept. 7.

Twin Disc Clutch Company, assignee: *See*—
Black, James B., and Shurts.

Tyler, Paul J., assignee, et al.: *See*—
Lawler, Frank P.

Tyrner, Joseph M., New York, N. Y., assignor to Air Reduction Company, Incorporated. Electric welding apparatus. 2,448,694, Sept. 7.

Union Special Machine Company, assignee: *See*—
Cook, Marvin L.
Smith, Clarence C.

Union Switch & Signal Company, The, assignee: *See*—
Allen, Earl M.

Unruh, Cornelius C.: *See*—
Kenyon, William O., and Unruh.

Upham, Sidney D.: *See*—
Moos, Anthony M., and Upham.

Upham, Sidney D., Pearl River, assignor ot American Cyanamid Company, New York, N. Y. Riboflavin solutions. 2,449,041, Sept. 7.

Valas, Peter D.: *See*—
Simpson, Thomas P., Payne, and Valas.

Van Derhoef, Henry E., Rochester, N. Y., and M. P. Davis, Sarasota, Fla., assignors to Eastman Kodak Company, Rochester, N. Y. Slitting machine. 2,448,934, Sept. 7.

Vanderveld, Anthony, assignor to Grand Rapids Store Equipment Company, Grand Rapids, Mich. Sliding door lock. 2,448,748, Sept. 7.

Van Dusen, Charles H., Jr. Willoughby, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del. Treated planographic printing plate. 2,448,749, Sept. 7.

Van Dyke, Edward E., Sherman Oaks, and K. Kerr, Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Control cable for aircraft. 2,448,847, Sept. 7.

Van Gilder, Carll F., Roselle, N. J., assignor to Standard Oil Development Company. Preparing salts of alkyl phenol sulfides. 2,449,026, Sept. 7.

Van Gundy, Charlie E.: *See*—
Love, Homer, Britain, Langton, and R. E. and C. E. Van Gundy.

Van Gundy, Ralph E.: *See*—
Love, Homer, Britain, Langton, and R. E. and C. E. Van Gundy.

Vanlaer, Pierre G. E. A., Le Cannet-Rocheville, Alpes-Maritimes, France. Sectional weaving loom. 2,448,935, Sept. 7.

Van Loenen, William F., Los Altos, Calif., assignor, by mesne assignments, to The Permanente Metals Corporation. Electrophoretic separating apparatus. 2,448,848, Sept. 7.

Van Ryan, Anthony, South Milwaukee, Wis., assignor to Line Material Company. Circuit breaker. 2,448,695, Sept. 7.

Van Wert, Charles H., Chatham, N. J. Adjustable eaves trough support. 2,448,750, Sept. 7.

Van Vandt, Claiborne C., Oconomowoc, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Step bearing for gyratory crushers. 2,448,936, Sept. 7.

Varney, Arthur F.: *See*—
Smith-Clarke, George T., and Varney.

Vickers-Armstrongs Limited, assignee: *See*—
Wilkins, Herbert C.

Vinyard, Roy E.: *See*—
Reading, George R., and Vinyard.

Vokes Limited, assignee: *See*—
Stokes, Edward A.

Volkel Bros. Machine Works, assignee: *See*—
Volkel, Frank G.

Volkel, Frank G., assignor to Volkel Bros. Machine Works, Los Angeles, Calif. Record edging lathe. 2,448,751, Sept. 7.

Voorhies, Alexis, Jr., East Baton Rouge, La., assignor to Standard Oil Development Company. Conversion of hydrocarbon oils. 2,449,027, Sept. 7.

Wachsman, Michael, Brooklyn, N. Y. Fabric contacting circuit closer for knitting machines. 2,448,639, Sept. 7.

Wagner, Harold H., Cincinnati, Ohio, and E. G. Magnus, assignors to The W. J. Fitzpatrick Company, Chicago, Ill. Rotor construction for comminuting and mixing machines. 2,448,849, Sept. 7.

Wagner, Simon P., Rockville, Md. Fishing rod holder. 2,448,752, Sept. 7.

Waldie, George A.: *See*—
MacMillin, Howard F., and Waldie.

Walker, Isaac F., Hockessin, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Comminuting impure DDT. 2,449, 028, Sept. 7.

Walker, Robert O., Hartsdale, N. Y. Forming screens for the reception of projected images. 2,448,560, Sept. 7.

Walliser, Robert E., assignor, by mesne assignments, to Libertyville Textiles, Inc., Libertyville, Ill. Loom. 2,448,929, Sept. 7.

Walsh, Edwin P., assignee: *See*—
Way, Stewart.

Walter, George L., Los Angeles, Calif. Neon light. 2,448,937, Sept. 7.

Walworth Patents Inc., assignee: *See*—
Ost, William R.

War, United States of America as represented by the Secretary of, assignee: *See*—
Moore, James R.

Warner Electric Brake Manufacturing Company, assignee: *See*—
Oetzel, John G.

Way, Stewart, Churchill Borough, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gas turbine apparatus. 2,448,561, Sept. 7.

Way, Stewart, Churchill Borough, and E. P. Walsh, Boothwyn, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Combustion apparatus. 2,448,562, Sept. 7.

Wayne, Anthony, New York, N. Y. Sanitary protective appliance. 2,448,938, Sept. 7.

Wean, Lincoln E., Philadelphia, Pa., and L. J. McCarty, Merchantville, N. J. Current-regulating plug and socket. 2,449,029, Sept. 7.

Weber, Victor, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Brush holder for electric motors. 2,448,850, Sept. 7.

Weesner, Carl W., Warren, Ohio, and W. B. Leffingwell, Sharon, E. R. Babylon, New Wilmington, and H. L. Schell, assignors to Sharon Steel Corporation, Sharon, Pa. Heat-treating and cold-rolling Hadfield manganese steel. 2,448,753, Sept. 7.

Welbel, Emil, Paterson, N. J. Garment hanger. 2,448,754, Sept. 7.

Weinreich, George: *See*—
Clare, Carl P., and Weinreich.

Weissberger, Arnold, C. J. Kibler, and R. V. Young, assignors to Eastman Kodak Company, Rochester, N. Y. Thioglycolic amide couplers. 2,448,939, Sept. 7.

Westenhaver, Marion J., et al.: *See*—
Oakley, Thurman, Westenhaver, and Eggmann.

Western Electric Company, Incorporated, assignee: *See*—
Aamot, Sven.
Arthur, Harry J., and McCrory.
Smith, Charles C.

Westinghouse Electric Corporation, assignee: *See*—
Way, Stewart.
Way, Stewart, and Walsh.

Weston, Cornelius F., Santa Monica, Calif. Wax caster. 2,448,640, Sept. 7.

Wetzel, Philip, Houston, Tex. Garbage can holder. 2,448,563, Sept. 7.

Wharam, John J., Dearborn, and F. G. Loon, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Steering linkage. 2,448,851, Sept. 7.

Wheelon, Orville A.: *See*—
Adams, Harold W., and Wheelon.

White, S. S., Dental Manufacturing Company, assignee: *See*—
Angell, Robert C.

Whitman, Gerald M., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Alkylation of cyclic unsaturated hydrocarbons using alkali metal catalyst. 2,448,641, Sept. 7.

Whittemore, A. J., & Sons, Inc., assignee: *See*—
Whittemore, Robert Y.
Whittemore, Robert Y., assignor to A. J. Whittemore & Sons, Inc., Burlington, N. C. Machine for making protective sleeves. 2,448,940, Sept. 7.

Young, Richard V.: *See*—
Weissberger, Arnold, Kibler, and Young.
Youngiove, David, Ilion, N. Y. Antiskid tire clamp. 2,449,033, Sept. 7.
Zacharias, Erhard, assignor to Postal Advertising Corporation, New York, N. Y. Combined mailbox and illuminated sign. 2,448,945, Sept. 7.
Zbrszovka Brno Narodni Podnik, assignee: *See*—
Kouckỳ, Josef and F.
Zellner, Carl N., Elizabeth, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Preparing 1,4-dicyano butene-2 from corresponding halogen compounds. 2,448,755, Sept. 7.
Zenith Optical Company: *See*—
Guttmann, Eric S.
Zideck, Ernest E., Pontiac, assignor of one-half to C. L. Stockstiel, Wayne County, Mich. Solar water heater. 2,448,648, Sept. 7.
Zimmerman, Herman W., deceased, North Newington, Conn.; S. V. M. Zimmerman, administratrix. Torque tool with ratchet signal. 2,449,034, Sept. 7.
Zimmerman, Sylvia V. M., administratrix: *See*—
Zimmerman, Herman W.
Zisman, William A., Washington, D. C., and G. M. Hain, United States Navy. Grease compositions. 2,448,567, Sept. 7.
Zufelt, Frederick L.: *See*—
Erickson, Carl E., and Zufelt.
Zwillinger, Max, and S. G. Hall, Washington, D. C. Apparatus and method for rectifying and projecting aerial photographs. 2,488,568, Sept. 7.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Paste, spotting. L. Adler. Re. 23,037, Sept. 7.

LIST OF DESIGN INVENTIONS

Bank, Child's. K. H. Stovner. 150,896, Sept. 7.
Base for a lipstick holder. R. C. Jones. 150,863, Sept. 7.
Bed unit, Nursery. A. M. Bleich. 150,822, Sept. 7.
Bottle. H. Rubin. 150,890–1, Sept. 7.
Bracelet or similar article. A. Katz. 150,864, Sept. 7.
Brooch or similar article. A. Katz. 150,865–6, Sept. 7.
Brooch or similar article. A. Katz. 150,868–9, Sept. 7.
Brooch or similar article. A. Philippe. 150,884, Sept. 7.
Brooch or the like. T. J. Manry. 150,880, Sept. 7.
Brooch pin or similar article. S. Hobe. 150,855–9, Sept. 7.
Brush, Hand and nail. F. Wagner. 150,913, Sept. 7.
Cabinet for space heaters or the like. C. S. Greer, Jr. 150,846–50, Sept. 7.
Candle, Personalized birthday. L. Lion. 150,879, Sept. 7.
Chair. W. C. Ross. 150,886, Sept. 7.
Chest or similar article. A. J. Buckner. 150,823, Sept. 7.
Clock. E. M. Fenenbock. 150,832, Sept. 7.
Coat. J. F. Strassner. 150,909, Sept. 7.
Communications unit or the like. L. J. Hruska and W. W. Garhutt. 150,861, Sept. 7.
Compact and scent spray, Combined. R. Bugbee. 150,826, Sept. 7.
Container for liquid cosmetics. M. Herrera, Jr. 150,854, Sept. 7.
Cooky. W. O. Forrer. 150,834–45, Sept. 7.
Credenza or similar article. A. J. Buckner. 150,824–5, Sept. 7.
Desk and bookcase, Combined. P. L. Peterson. 150,883, Sept. 7.
Dispenser, Beverage. A. R. Burgess. 150,827, Sept. 7.
Dispensing device for collapsible tube. W. E. Richardson. 150,885, Sept. 7.
Dolly or the like, Crocheted. M. R. Craig. 150,828, Sept. 7.
Drawer pull and label holder, Combined. G. S. Underwood. 150,912, Sept. 7.
Dress. J. F. Strassner. 150,897–908, Sept. 7.
Dress ensemble. J. F. Strassner. 150,910, Sept. 7.
Fixture, Lighting. C. A. Duepner. 150,830–1, Sept. 7.
Fixture, Lighting. E. F. Guth and E. C. Koegel. 150,853, Sept. 7.
Frame, Sewing machine. M. McCann. 150,882, Sept. 7.
Frame, Spectacle. V. Tanasso. 150,911, Sept. 7.
Game counting board. L. F. Stewart. 150,895, Sept. 7.
Glasses, Sun. L. M. Flagg. 150,833, Sept. 7.
Hair ornament, Carded two-piece. J. Jackson. 150,862, Sept. 7.
Handbag. J. I. Horner. 150,860, Sept. 7.
Handbag, Lady's. A. Konelsky. 150,878, Sept. 7.
Handbag, or similar article. J. S. Singer. 150,893, Sept. 7.
Holder, Comb. A. J. Gurczak. 150,852, Sept. 7.
Holder, Telephone. R. B. Bianchi. 150,821, Sept. 7.
Holder, Tube and toothbrush. J. W. Doucette. 150,829, Sept. 7.
Inkwell, Desk set. R. A. May and H. E. Steinberg. 150,881, Sept. 7.
Jewelry finding. A. Katz. 150,876, Sept. 7.
Key or the like. W. F. Rothe. 150,887–9, Sept. 7.
Lamp or the like. I. Sacks. 150,892, Sept. 7.
Link for a bracelet or similar article. A. Katz. 150,877, Sept. 7.
Necklace or similar article. A. Katz. 150,867, Sept. 7.
Necklace or similar article. A. Katz. 150,870–5, Sept. 7.
Necktie, Pleated. J. B. Grinoch. 150,851, Sept. 7.
Projector, Picture. H. Wolfer and M. Marder. 150,914, Sept. 7.
Rocking chair or similar article, Folding. H. A. Smith. 150,894, Sept. 7.
Support, Light fixture. E. G. Anderson. 150,820, Sept. 7.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive products, Manufacture of. J. N. Kuzmick and D. Bell. 2,448,985, Sept. 7.
Acid derivatives, Dithio. A. F. Hardman. 2,448,714, Sept. 7.
Acid, Production of itaconic. J. A. Ambler and A. L. Curl. 2,448,506, Sept. 7.
Acid, Production of itaconic. E. J. Roberts, J. A. Ambler, and A. L. Curl. 2,448,831, Sept. 7.
Acids, Isolating low-methoxyl pectinic. R. M. McCready, H. S. Owens, and W. D. Maclay. 2,448,818, Sept. 7.
Activation of petroleum adsorbents. T. P. Simpson, J. W. Payne, and P. D. Valas. 2,449,016, Sept. 7.
Acylamino dianthrimide acridones, Producing. M. Scalera and A. W. Joyce. 2,449,011, Sept. 7.
Adhesive tape, Heat-sealing. T. F. Murray, Jr., and G. F. Sharrard. 2,448,638, Sept. 7.
Adjustable eaves trough support. C. H. Van Wert. 2,448,750, Sept. 7.
Adjustable reclining chair. C. Collins. 2,448,860, Sept. 7.
Air heater having reverted expanding combustion chamber. W. Holbrook. 2,448,595, Sept. 7.
Air supply and control means for furnaces, Forced draft. H. P. Katz. 2,448,891, Sept. 7.
Aircraft heating and deicing system. W. W. Reaser. 2,448,826, Sept. 7.
Alkylation of phenolic compounds. D. E. Winkler and R. H. Mortimer. 2,448,942, Sept. 7.
Alloy steels, Austenitic. A. E. Thornton. 2,449,023, Sept. 7.
Alloys, Grain refining magnesium. C. H. Mahoney, H. C. Lee, A. R. Tarr, and P. E. Le Grand. 2,448,993, Sept. 7.
Animal trap. C. W. Crumrine. 2,448,780, Sept. 7.
Attenuator. J. P. Smith, Jr. 2,449,019, Sept. 7.
Alarm, Auto prowler. L. D. and D. L. Jolley. 2,448,597, Sept. 7.
Alkylol amine salts of hydroxy fatty acids and process for their preparation. B. B. Schaeffer. 2,448,626, Sept. 7.
Amalgamator, Dental. B. Stewart. 2,448,840, Sept. 7.
Amines, Manufacture of primary. M. Grunfeld. 2,449,036, Sept. 7.
Antiskid tire clamp. D. Younglove. 2,449,033, Sept. 7.
Apparatus and method for rectifying and projecting aerial photographs. M. Zwillinger and S. G. Hall. 2,448,568, Sept. 7.
Apparatus for arranging, ganging, and assorting articles according to size. W. F. Aller. 2,448,652, Sept. 7.
Apparatus for bonding wear-resistant facing elements to machine elements. H. F. Storm. 2,448,690, Sept. 7.
Apparatus for catalytic conversion of hydrocarbon vapors. C. S. Reed and A. H. Schutte. 2,448,549, Sept. 7.
Alkenoxy amino diphenylamines. R. P. Parker and J. J. Denton. 2,449,006, Sept. 7.
Alkylation of cyclic unsaturated hydrocarbons using alkali metal catalyst. G. M. Whitman. 2,448,641, Sept. 7.
Apparatus for continuously processing strips. F. K. Schefe. 2,448,835, Sept. 7.
Apparatus for detecting and locating enemy vessels. C. B. Ferrel. 2,448,787, Sept. 7.
Apparatus for dispersing gases in liquids. R. E. Gunther. 2,448,590, Sept. 7.
Apparatus for feeding glass. A. W. Schmid. 2,448,915, Sept. 7.
Apparatus for measuring force exerted by a resilient annulus. R. J. S. Pigott and P. G. Exline. 2,448,735, Sept. 7.
Apparatus for mounting a roller in a cavity in a member. M. Royer. 2,448,833, Sept. 7.
Apparatus for regulating centrifugal machines. L. F. Moody. 2,449,002, Sept. 7.
Apparatus for testing molding sand. H. W. Dietert. 2,448,964, Sept. 7.
Aqueous suspensions and solutions, Concentrating. R. Holzcker. 2,448,802, Sept. 7.
Arm, Engine rocker. J. M. Leake. 2,448,989, Sept. 7.
Art of winding odd-shape coils. H. V. Knauf, Jr. 2,448,672, Sept. 7.
Artificial flame. P. and C. C. Munao. 2,448,906, Sept. 7.
Automatic electromagnetic automobile door emergency latch. E. L. Pratt. 2,448,619, Sept. 7.
Awning. E. Kraus. 2,448,984, Sept. 7.
Axle box. C. A. Bowen. 2,448,655, Sept. 7.
Azo compounds containing a tetrahydroquinoline nucleus. J. B. Dickey and J. G. McNally. 2,448,871, Sept. 7.
Azo compounds containing a triazole nucleus. J. B. Dickey and J. G. McNally. 2,448,870, Sept. 7.

Bag holder. J. E. Murphy. 2,448,821, Sept. 7.
Band, Wrist watch. I. Wolff. 2,448,943, Sept. 7.
Bank, Toy. J. L. Baum. 2,448,951, Sept. 7.
Bar: *See*—
Playing bar.
Bearing: *See*—
Noiseless rudder post bearbearing.
B,B'-dicyano diethyl ether, Production of. H. Hopff and W. Rapp. 2,448,979, Sept. 7.
Bed rest. W. R. Smith. 2,448,924, Sept. 7.
Block: *See*—
Magnetic block.
Blower, Interengaging impeller rotary positive displacement. R. P. McCulloch and J. L. Ryde. 2,448,901, Sept. 7.
Blowoff valve for steam boilers, Continuous. H. E. May. 2,448,816, Sept. 7.
Boat loading device. G. W. Harder. 2,448,591, Sept. 7.
Boat-steering mechanism, Automatic. G. W. Crise. 2,448,778, Sept. 7.
Bobbin marking mechanism. G. Clark. 2,448,773, Sept. 7.
Bolt, Toggle. H. N. Boyer. 2,448,700, Sept. 7.
Bookholder for bedsteads R. L. Phillips. 2,448,734, Sept. 7.
Bookmark, Magnetic. W. S. Martin. 2,448,611, Sept. 7.
Box: *See*—
Axle box.
Bracket: *See*—
Lavatory supporting bracket.
Brake and hoist combination, Aerodynamic. J. B. Black and W. F. Shurts. 2,448,855, Sept. 7.
Brake mechanism, Booster. J. G. Ingress. 2,448,981, Sept. 7.
Bran and rice polish, Processing rice. A. K. Ozai-Durrani. 2,448,729, Sept. 7.
Brassière, Strapless. L. Shulman. 2,448,919, Sept. 7.
Bromination of unsaturated organic compounds. J. Ross. 2,448,739, Sept. 7.
Bulb exposure mechanism for camera shutters. C. C. Fuerst. 2,448,877, Sept. 7.
Buoy, Radio listening. C. W. Hansell. 2,448,713, Sept. 7.
Burner: *See*—
Multiple orchard burner.
Cable adjuster, Brake. J. M. Woodson. 2,449,031, Sept. 7.
Cable for aircraft, Control. E. E. Van Dyke and K. Kerr. 2,448,847, Sept. 7.
Calling device. F. E. Wood, F. Glenger, E. Decker, and R. L. Sargisson. 2,448,647, Sept. 7.
Cap: *See*—
Chimney cap.
Cap for masks or the like. C. Lamar. 2,448,893, Sept. 7.
Capacitor. H. M. Huckleberry. 2,448,887, Sept. 7.
Cargo-carrying airplane. R. B. Conklin. 2,448,862, Sept. 7.
Carton, Divisible. L. P. Grecco. 2,448,795, Sept. 7.
Casket and making the same. M. Skolnik. 2,448,923, Sept. 7.
Caster, Wax. C. F. Weston. 2,448,640, Sept. 7.
Casting apparatus, Displacement type. R. J. Miller. 2,448,903, Sept. 7.
Catalyst fines in a catalyst conversion system, Recycling. A. H. Schutte and C. S. Reed. 2,448,553, Sept. 7.
Cathode-ray oscillograph circuit. P. S. Christaldi. 2,448,771, Sept. 7.
Cathode structure for electron discharge devices. C. R. Blazier and D. A. S. Hale. 2,448,573, Sept. 7.
Cellulose ester lithographic printing process. R. S. Colt. 2,448,861, Sept. 7.
Chair: *See*—
Adjustable reclining chair.
Chamber, Portable recompression. L. M. Plemel and B. J. Abernathy, Jr. 2,448,546, Sept. 7.
Chimney cap. E. W. Kepple. 2,448,806, Sept. 7.
Chlorinated paraffin wax amines for controlling fungi and bacteria. T. E. Reamer. 2,448,910, Sept. 7.
Chlorination of starch and products thereof. H. N. Barham. 2,448,510, Sept. 7.
Chuck. W. Coulson. 2,448,579, Sept. 7.
Chuck, Multiple jaw. E. A. Glynn. 2,448,881, Sept. 7.
Chuck or workholder. B. O. Richard. 2,448,738, Sept. 7.
Cigarette ejecting device. F. Roth. 2,448,914, Sept. 7.
Cinematographic method and apparatus. F. W. Taylor. 2,448,691, Sept. 7.

Circuit: *See*—
Cathode-ray oscillograph circuit.
Circuit bearing element. J. W. Armbruster. 2,448,761, Sept. 7.
Circuit breaker. A. Van Ryan. 2,448,695, Sept. 7.
Circuit breaker-hold-in mechanism. W. M. Scott, Jr. 2,449,013, Sept. 7.
Circuit closer for knitting machines, Fabric contacting. M. Wachsman. 2,448,639, Sept. 7.
Circuit control for railway signals, Trap. E. M. Allen. 2,448,570, Sept. 7.
Circuit for periodically generating oscillations. J. R. Moore. 2,448,543, Sept. 7.
Circuit for television receivers, Echo reducing. J. E. Smith. 2,448,635, Sept. 7.
Circuit including a preenergizing circuit for the impulsing relay, Impulsing. C. E. Lomax. 2,448,608, Sept. 7.
Circuits for piezoelectric crystals, Testing. I. E. Fair. 2,448,581, Sept. 7.
Circuits, Frequency discriminating. T. A. O. Gross. 2,448,526, Sept. 7.
Circuits, Motor control. J. R. Wilkerson. 2,448,564, Sept. 7.
Clamp: *See*—
Antiskid tire clamp.
Clamp for curtain stretchers. W. H. Bothe. 2,448,574, Sept. 7.
Clasp, Collar. T. Thoreson. 2,448,845, Sept. 7.
Closure, Container. S. Shaffer. 2,449,014, Sept. 7.
Closure for an inflatable structure. G. D. Mallory. 2,448,677, Sept. 7.
Closure for containers. F. W. Sohnlein. 2,448,838, Sept. 7.
Clutch mechanism. J. J. Bloomfield. 2,448,763, Sept. 7.
Clutch: *See*—
Overrunning clutch.
Clutch plate, Friction. D. E. Gamble. 2,448,879, Sept. 7.
Clutch plate, Friction. D. E. Gamble. 2,448,880, Sept. 7.
Collar, Valve stop. C. B. Johnson. 2,448,529, Sept. 7.
Combustion apparatus. S. Way and E. P. Walsh. 2,448,562, Sept. 7.
Compass, Draftaman's. F. Fuller. 2,448,878, Sept. 7.
Composition comprising an acyl peroxide cured polyester and an alkaline carbonate. B. S. Biggs. 2,448,572, Sept. 7.
Composition comprising organic peroxide cured glycol-dicarboxylic acid polyester and red oxide of iron. F. S. Maim. 2,448,609, Sept. 7.
Composition containing talloil resins. W. J. Rice. 2,448,621, Sept. 7.
Composition for treating coal and the like. W. E. Kleinicke. 2,448,605, Sept. 7.
Concrete post form. R. L. Hall. 2,448,883, Sept. 7.
Condensation products obtained from anacardic materials. M. T. Harvey. 2,448,715, Sept. 7.
Condensation products of polyhydroxy alkylamines with aldehydes. W. B. Johnston. 2,448,890, Sept. 7.
Conductor, Insulated electrical. C. C. Smith. 2,448,633, Sept. 7.
Confectionery forming mechanism. C. E. Faxon. 2,448,786, Sept. 7.
Connector: *See*—
Electrical connector. Plug connector.
Connector for electric cables and the like. V. D. Burke. 2,448,766, Sept. 7.
Consistency meter. H. W. Laurance. 2,448,533, Sept. 7.
Container: *See*—
Pocket-type tissue container.
Container refrigerated by dry ice, Shipping. A. J. Nicholas. 2,449,005, Sept. 7.
Continuous film drier. A. E. Beguin. 2,448,854, Sept. 7.
Control and signaling device, Thermostatic. G. W. Crise. 2,448,776, Sept. 7.
Control apparatus. S. Aamot. 2,448,852, Sept. 7.
Control device. G. E. Franck. 2,448,968, Sept. 7.
Control mechanism for a plurality of motors. P. L. Loewe. 2,448,675, Sept. 7.
Control system, Fully automatic desurfacing. J. H. Bucknam. 2,448,657, Sept. 7.
Control unit. C. A. Arens. 2,448,696, Sept. 7.
Conversion of hydrocarbon oils. A. Voorhies, Jr. 2,449,027, Sept. 7.
Copolymer of isopropenyl acetate, Resinous. W. O. Kenyon and C. C. Unruh. 2,448,531, Sept. 7.
Copolymers of halo allyl esters of carboxylic acids. A. M. Clifford. 2,448,703, Sept. 7.
Cord processing apparatus. R. E. Solliday and H. E. Riggs. 2,448,743, Sept. 7.
Core construction, Laminated. L. M. Dolan. 2,448,785, Sept. 7.
Core for closure frame trim elements. O. B. Merrill. 2,449,000, Sept. 7.
Core or mold and making same, Foundry. A. L. Rummelsburg. 2,448,624, Sept. 7.
Corundum and spinel, Glossing. M. H. Barnes and E. L. McCandless. 2,448,511, Sept. 7.
Counter adapted to operate over variable predeterminable periods of time, Revolution. H. C. Wilkins. 2,448,643, Sept. 7.
Couplers, Thioglycolic amide. A. Weissberger, C. J. Kibler, and R. V. Young. 2,448,939, Sept. 7.
Coupling: *See*—
Flexible drive coupling. Rotary turbine-type hydraulic coupling.
Pipe coupling.
Coupling. G. W. Purdy. 2,448,548, Sept. 7.
Coupling. A. T. Scheiwer. 2,448,688, Sept. 7.
Coupling device, Tractor-trailer. S. R. Strader. 2,448,744, Sept. 7.
Coupling for linear actuators, Universal. W. K. Schon. 2,448,917, Sept. 7.
Coupling for rods, cables, and the like. G. W. Purdy. 2,448,547, Sept. 7.
Coupling with centrifugal lockup means, Fluid. E. R. Maurer. 2,448,539, Sept. 7.
Cover: *See*—
Wheel cover.
Cover plate, Illuminated. W. C. Linton. 2,448,606, Sept. 7.
Cover remover, Cam. G. C. Erb. 2,448,522, Sept. 7.
Cracking process, Continuous. T. P. Simpson and S. C. Eastwood. 2,448,922, Sept. 7.
Crankshaft, Built-up. G. T. Smith-Clarke and A. F. Varney. 2,448,742, Sept. 7.
Crustacean meat, Preserving tinned. J. J. Ganucheau. 2,448,970, Sept. 7.
Cutter: *See*—
Tube cutter.
Cutting mechanism for Axminster looms, Tuft. W. Y. Robb. 2,448,829, Sept. 7.
Cutting mechanism, Loop. C. G. Richardson. 2,448,686, Sept. 7.
Cyclic regulation of crystallizers. J. E. Mason. 2,448,538, Sept. 7.
Cylinder, Engine. H. Johnson. 2,448,983, Sept. 7.
DDT-alkylated naphthalene insecticide, Low-temperature noncrystallizing. E. E. Fleck and R. K. Preston. 2,448,665, Sept. 7.
DDT, Comminuting impure. I. F. Walker. 2,449,028, Sept. 7.
Debarking apparatus. A. P. Schnyder. 2,448,689, Sept 7.
Decapper, Comb. W. C. Ladwig. 2,448,986, Sept. 7.
De-emulsification of water gas tar emulsions and oil gas tar emulsions. S. A. Petrino. 2,448,684, Sept. 7.
Deflector for accordions, Sound. R. Pancotti. 2,448,682, Sept. 7.
Derivative of cellulose yarn, Sized organic. R. H. Balch and I. G. McCormick. 2,448,571, Sept. 7.
Detection of high-speed charged particles. R. H. Dicke. 2,448,963, Sept. 7.
Detector, Magnetic. F. G. Merrill. 2,448,613, Sept. 7.
Devices for exercising and treating feet. W. Gustlin. 2,448,797, Sept. 7.
Device for practicing golf. S. A. Milliner. 2,448,904, Sept. 7.
Device for selecting metal pieces. E. R. Mann and T. T. Goldsmith, Jr. 2,448,814, Sept. 7.
Device for testing magnetic materials. T. T. Goldsmith, Jr., and E. R. Mann. 2,448,794, Sept. 7.
Device for winding hectograph rolls evenly. W. J. Champion. 2,448,659, Sept. 7.
Device to regulate depth of gasoline in the float chamber of a carburetor. L. W. Gilbert. 2,448,709, Sept. 7.
Die: *See*—
Stopper press die.
Diketo acrylates. A. M. Clifford. 2,448,958, Sept 7.
Dipentaerythritol from mixtures containing the same, Obtaining. J. A. Wyler. 2,448,566, Sept. 7.
Dipper, Ice-cream. M. F. Costa. 2,448,863, Sept. 7.
Discharge device and circuits therefore, Cold cathode electron. C. W. Hansell. 2,448,527, Sept. 7.
Dispensing device, Liquid. M. L. Trochim. 2,448,846, Sept. 7.
Dispersions of polytetra-fluoroethylene-ethylene copolymers, Obtaining. K. L. Berry. 2,448,952, Sept. 7.
Divider, Medical. C. G. Geissler. 2,448,708, Sept 7.
Doll, Jointed mannequin. M. Geller. 2,448,668, Sept. 7.
Door holder. E. J. Blackman. 2,448,953, Sept. 7.
Door mat, Self-cleaning. C. O. Swanson. 2,448,931, Sept. 7.
Drawer for refrigerated lockers. W. M. Baird. 2,448,949, Sept. 7.
Drier: *See*—
Continuous film drier.
Drive for brushes and the like, Motor. G. B. Mirus. 2,448,614, Sept. 7.
Drive unit, Power take-off. C. P. Pinardi and H. L. Brock. 2,448,822, Sept. 7.
Drying apparatus, Motor vehicle. L. J. Rousseau. 2,448,834, Sept. 7.
Drying oils from a dithiol and divinylacetylene, Synthetic. C. M. Langkammerer. 2,448,987, Sept. 7.
Duplex four-way valve. H. W. Adams and O. A. Wheelon. 2,448,649, Sept. 7.
Dynamic damper support. A. T. Gregory and C. C. De Pew. 2,448,973, Sept. 7.
Dynamoelectric machine. M. D. Stahl. 2,449,021, Sept. 7.
Easel frame. W. J. Crosby. 2,448,580, Sept. 7.
Elastic and elastomer products, Synthetic. M. M. Sprung and C. A. Burkhard. 2,448,556, Sept. 7.
Elastomers and preparing the same, Dimethyl silicon. J. G. E. Wright and C. S. Oliver. 2,448,565, Sept. 7.

Elastomers, Methyl siloxane. M. C. Agens. 2,448,756, Sept. 7.
Electric control switch. W. J. Aitken. 2,448,650, Sept. 7.
Electric furnace. R. K. Hopkins. 2,448,886, Sept. 7.
Electric heater for tanks. T. F. Green, Jr. 2,448,669, Sept. 7.
Electric heating apparatus. E. S. Smith. 2,448,634, Sept. 7.
Electric heating device. W. A. Bohannon. 2,448,856, Sept. 7.
Electric iron. S. and A. Chiarotti. 2,448,577, Sept. 7.
Electric portable stove. E. J. Christensen. 2,448,956, Sept. 7.
Electric switch. E. G. Taylor. 2,448,841, Sept. 7.
Electric system to control impedances. F. J. Hooven. 2,448,885, Sept. 7.
Electric timing motor. J. Lemire. 2,448,812, Sept. 7.
Electric welding apparatus. J. M. Tyrner. 2,448,694, Sept. 7.
Electrical connector. C. Antony, Jr., and D. Mannheimer. 2,448,509, Sept. 7.
Electrical contact brush. D. Ramadanoff. 2,448,685, Sept. 7.
Electrical instrument follow-up system. E. C. Burdick. 2,448,575, Sept. 7.
Electrical resistor. C. F. Alban. 2,448,757, Sept. 7.
Electrical socket and adapter. A. Morris. 2,448,725, Sept. 7.
Electron discharge tube. P. W. Stutsman. 2,448,559, Sept. 7.
Electrophoretic separating apparatus. W. F. Van Loenen. 2,448,848, Sept. 7.
Electrophysiotherapeutic apparatus. R. H. Maxson. 2,448,540, Sept. 7.
Electrophysiotherapeutic apparatus. R. H. Maxson. 2,448,541, Sept. 7.
Engine: *See*—
Internal-combustion engine (turbine type).
Engine starting device. H. E. Throsel. 2,448,844, Sept. 7.
Error indication, Directionally sensitive firing. A. E. S. Green. 2,448,587, Sept. 7.
Ester silver halide emulsion, Sensitized photographic cellulose. W. G. Lowe and R. G. Tarkington. 2,448,534, Sept. 7.
Esters. M. E. Cupery. 2,448,520, Sept. 7.
Esters of riboflavin and preparation of same, Water-soluble. A. M. Moos and S. D. Upham. 2,449,003, Sept. 7.
Ether acetals, Preparation of. W. J. Croxall and H. T. Neher. 2,448,660, Sept. 7.
Ethers and dyeing of fabrics therewith, Dyed cellulose. W. B. Carroll, Jr. 2,448,515, Sept. 7.
Ethylene polymer compositions. W. B. Happoldt, Jr., and A. Stockfleth. 2,448,799, Sept. 7.
Ethylene-vinyl ester copolymer and N-substituted polyamide, Mixture of hydrolyzed. F. W. Hoover. 2,448,978, Sept. 7.
Eviscerating method and apparatus. R. D. Trelease and C. H. Koonz. 2,448,693, Sept. 7.
Exploration operations, Seismic. T. O. Harkness. 2,449,037, Sept. 7.
Explosive assemblies, Making. C. H. Carey. 2,448,658, Sept. 7.
Factor controller, Automatic power. H. E. Thomas. 2,448,843, Sept. 7.
Fastener: *See*—
Window lift and fastener.
Fastening device. W. McArthur. 2,448,817, Sept. 7.
Feeding mechanism, Hydraulically operated. H. A. Silven. 2,448,921, Sept. 7.
File, Billiard cue tip. G. J. Fleshman. 2,448,967, Sept. 7.
Film feed mechanism, Intermittent. R. A. Clapp. 2,448,519, Sept. 7.
Filter: *See*—
Nasal filter.
Porous filter.
Filter and connection shield, Dual. E. C. Hallett. 2,448,711, Sept. 7.
Fish bite signal device. O. K. Nutter. 2,448,681, Sept. 7.
Fishhook holder. A. S. Omohundro. 2,448,728, Sept. 7.
Fish lure. A. F. Fibiger. 2,448,523, Sept. 7.
Fishing rod holder. S. P. Wagner. 2,448,752, Sept. 7.
Fitting. D. P. Hynes. 2,448,888, Sept. 7.
5-benzimidazol derivatives of barbituric acid. G. J. Martin and S. Avakian. 2,448,722, Sept. 7.
Flash and blast reducer. R. A. Heising. 2,448,593, Sept. 7.
Flexible drive coupling. A. H. Pattison. 2,448,732, Sept. 7.
Flight computer. L. W. Imm. 2,448,596, Sept. 7.
Fluid-coupling assembly. J. M. W. Chamberlain. 2,448,769, Sept. 7.
Flutter predicting apparatus. M. A. Biot and T. H. Wiancko. 2,448,698, Sept. 7.
Folding machine, Heater. G. G. Schneider and F. L. Donohue. 2,448,916, Sept. 7.
Fountain implement with pivotally mounted dual brush units. R. C. Logan. 2,448,607, Sept. 7.
Frame: *See*—
Easel frame.
Frame structure for ventilating fans. P. E. Hord. 2,448,671, Sept. 7.
Fuel system for aircraft power plants for aircraft propulsion and boundary layer air control. E. A. Stalker. 2,449,022, Sept. 7.
Furnace: *See*—
Electric furnace.
Game, Baseball. C. E. Siberts. 2,448,837, Sept. 7.
Garbage can holder. P. Wetzel. 2,448,563, Sept. 7.
Garment hanger. W. R. Kohl. 2,448,673, Sept. 7.
Garment hanger. E. Weibel. 2,448,754, Sept. 7.
Gas meter prover apparatus. T. Oakley, M. J. Westenhaver, and R. E. Eggmann. 2,448,616, Sept. 7.
Gas turbine apparatus. S. Way. 2,448,561, Sept. 7.
Generator: *See*—
Surge generator.
Glide path for ground training, Automatic simulated two pointer. C. W. Muller. 2,448,544, Sept. 7.
Glove, Welding. R. Bakke. Sept. 7.
Glycidyl esters. E. B. Kester and H. M. Preusser. 2,448,602, Sept. 7.
Grease compositions. W. A. Zisman and G. M. Hain. 2,448,567, Sept. 7.
Greases, Novel. F. J. Licata. 2,448,720, Sept. 7.
Grips for perforated records, Woven sensing. J. W. Armbruster. 2,448,759, Sept. 7.
Grips for perforated records, Woven sensing. J. W. Armbruster. 2,448,760, Sept. 7.
Grinder, Adjustable internal expansion. S. R. Keller. 2,448,600, Sept. 7.
Grinding machine. S. E. Schroeder. 2,448,551, Sept. 7.
Grip for auto tires, Skidless steel. L. Paraskevas. 2,448,730, Sept. 7.
Gripping means for game balls. A. Park. 2,448,731, Sept. 7.
Guard, Lamp. F. M. Fike. 2,448,582, Sept. 7.
Turret for aircraft, Gun. E. C. M. d'Assis-Fonseca. 2,448,704, Sept. 7.
Gyro assembly, Self-compensating. B. B. K. Morse. 2,448,905, Sept. 7.
Handle: *See*—
Shopping bag handle.
Handle bar and seat attachment, Bicycle. W. G. Darden. 2,448,867, Sept. 7.
Handle means and file guide for saw files, Combined. F. C. Brothers. 2,448,702, Sept. 7.
Handpiece, Dental engine. R. C. Angell. 2,448,758, Sept. 7.
Hanger: *See*—
Garment hanger.
Paint can hanger.
Shoulder pad filler garment hanger.
Harpoon construction. J. T. Crandall. 2,448,864, Sept. 7.
Harvester and straw buncher, Combine. W. F. Reisenweber. 2,448,737, Sept. 7.
Hassock. J. M. Smiler. 2,449,017, Sept. 7.
Hay buck, Power. F. L. Selak. 2,448,631, Sept. 7.
Heat recovery system for catalytic conversion processes. C. S. Reed and A. H. Schutte. 2,448,550, Sept. 7.
Heater: *See*—
Self-supporting, self-adjusting electric water heater.
Solar water heater.
Heating system. J. La Raus. 2,448,988, Sept. 7.
Heating system, Drier. R. D. Cheesman. 2,448,770, Sept. 7.
Heat-treating machine. W. F. Butler. 2,448,514, Sept. 7.
Hexamethylene tetramine, Manufacture of. P. Schideler and C. P. Davis. 2,449,040, Sept. 7.
High-low gas valve. H. W. Anderson. 2,448,654, Sept. 7.
Hoist. F. P. Lawler. 2,448,674, Sept. 7.
Holder: *See*—
Bag holder.
Door holder.
Fishhook holder.
Fishing rod holder.
Garbage can holder.
Ticket holder.
Welding rod holder.
Holder for electric motors, Brush. V. Weber. 2,448,850, Sept. 7.
Homogeneous partially chlorinated derivatives of rubber, Preparing. C. Koningsberger. 2,448,809, Sept. 7.
Hook attachment for ladders. G. K. Hurd. 2,448,716, Sept. 7.
Hook, Drapery. E. C. Swanson. 2,448,637, Sept. 7.
House, Collapsible. J. T. Lawrence. 2,448,895, Sept. 7.
Hunting and fishing garment. H. M. Hutchinson. 2,448,804, Sept. 7.
Hydrocarbon alkylation process. C. S. Kelley. 2,448,601, Sept. 7.
Hydrocarbon conversion catalyst, Making a. G. C. Connolly. 2,448,960, Sept. 7.
Hydrocarbons, Stabilizing. R. F. Robey, J. Fedirko, and A. E. Barnett. 2,449,010, Sept. 7.
Hydrolyzed ethylene vinyl ester polymers, Insolubilizing. W. L. Alderson, Jr. 2,448,946, Sept. 7.
Hydroxyethylation. W. W. Carlson. 2,448,767, Sept. 7.
Image former with negative meniscus lens spherical aberration corrector, Schmidt type. A. Bouwers. 2,448,699, Sept. 7.
Injection molding apparatus. H. J. Arthur and H. S. McCrory. 2,448,947, Sept. 7.
Injector, Lubricant. A. P. Fox. 2,448,583, Sept. 7.
Inker. C. W. Harrold and H. F. Meyer. 2,448,975, Sept. 7.
Insulation from metallic electric conductors, Removing. Y. Piskac and R. E. Smiley. 2,448,909, Sept. 7.

Internal-combustion engine and operating. E. M. Barber and J. B. Malin. 2,448,950, Sept. 7.
Internal-combustion engine (turbine type). E. W. Gizara. 2,448,972, Sept. 7.
Ironing machine. H. H. Babcock. 2,448,948, Sept. 7.
Joint: *See*—
Pipe joint.
Key punch. L. L. Curtis. 2,448,961, Sept. 7.
Knife having replaceable blades. J. Ciarlone. 2,448,957, Sept. 7.
Latch: *See*—
Automatic electromagnetic door latch.
Solenoid with plunger and automobile door emergency latch.
Lathe, Record edging. F. G. Volkel. 2,448,751, Sept. 7.
Lavatory supporting bracket. A. H. Haberstump. 2,448,798, Sept. 7.
Light, Neon. G. L. Walter. 2,448,937, Sept. 7.
Liquid and gas transfer in mercury switches. E. W. Rickmeyer. 2,448,687, Sept. 7.
Light control device, Remote control. F. Chanoux. 2,448,859, Sept. 7.
Lock: *See*—
Sliding door lock.
Lock for fishing reels, Spool. H. I. Mandolf. 2,448,610, Sept. 7.
Loom: *See*—
Sectional weaving loom.
Lubricant, Rust-inhibiting. W. R. Turner. 2,449,025, Sept. 7.
Lubricator: *See*—
Rail lubricator.
Machine for making protective sleeves. R. Y. Whittemore. 2,448,940, Sept. 7.
Machine for severing and driving corrugated fasteners. A. E. Cranston, Jr. 2,448,801, Sept. 7.
Machine for sorting cards perforated in alphabetical code. E. A. Ford. 2,448,788, Sept. 7.
Magnetic block. M. O. Teetor. 2,448,692, Sept. 7.
Mailbox and illuminated sign, Combined. E. Zacharias. 2,448,945, Sept. 7.
Marker, Dress pattern. C. Schaffner. 2,448,627, Sept. 7.
Massaging apparatus, G. W. Crise. 2,448,777, Sept. 7.
Meter: *See*—
Consistency meter.
Method and apparatus for measuring permeability. W. A. Bruce. 2,448,955, Sept. 7.
Method and apparatus for measuring surface tension. H. M. Cassel. 2,448,768, Sept. 7.
Method and apparatus for separating peanuts from debris. F. J. Paul. 2,449,007, Sept. 7.
Method of and apparatus for processing yeast. A. M. Fischer. 2,448,927, Sept. 7.
Method of and device for producing pulses at the maximum or minimum of an electric impulse. M. Koulicovitch. 2,448,718, Sept. 7.
Microscopy, High resolution. J. Hillier and R. F. Baker. 2,448,594, Sept. 7.
Mirror and cabinet, Combined. S. C. Schonfield. 2,448,836, Sept. 7.
Mold: *See*—
Suction mold.
Molding, Injection. H. F. MacMillin and G. A. Waldie. 2,448,676, Sept. 7.
Motor: *See*—
Electric timing motor.
Motor, Internal combustion unit for aircrafts, Supercharged multiple. A. G. Forsyth. 2,448,789, Sept. 7.
Motor system, Rectifier fed. P. Glass. 2,448,793, Sept. 7.
Motor system using voltage regulating transformer. J. G. Sola. 2,448,925, Sept. 7.
Muffler. C. Peters. 2,449,009, Sept. 7.
Multiple orchard burner. J. L. Breese. 2,448,656, Sept. 7.
Nasal filter. C. L. McGovney. 2,448,724, Sept. 7.
Needle, Hypodermic. M. L. Lockhart. 2,448,898, Sept. 7.
Networks, Modulation. E. K. Stodola. 2,448,558, Sept. 7.
N-isopropyl-methacrylamide, Production of. J. G. Lichty. 2,448,991, Sept. 7.
Noiseless rudder post bearing. E. S. Aker. 2,448,651, Sept. 7.
Noncombustibles from fuel gas, Removing. J. W. Latchum, Jr. 2,448,719, Sept. 7.
Nursing unit. A. M. Allen. 2,448,569, Sept. 7.
Nut lock construction. W. R. McKenzie. 2,448,902, Sept. 7.
Nutrient, Producing corn steep. R. P. Myers and M. L. Speck. 2,448,680, Sept. 7.
1,4-dicyano butene-2 from corresponding halogen compounds, Preparing. C. N. Zeller. 2,448,755, Sept. 7.
1,3-diols, Production of. L. A. Mikeska and E. Arundale. 2,449,001, Sept. 7.
Ore, Deironing chromium. A. Greffe. 2,448,882, Sept. 7.
Oven for heating asphalt tile and the like. M. Mayer. 2,448,723, Sept. 7.
Overrunning clutch. T. I. Ress and J. W. Lang, Jr. 2,448,912, Sept. 7.
Oxidation of cellulose. W. O. Kenyon and E. C. Yackel. 2,448,892, Sept. 7.
Oxide production, Titanium. J. H. Peterson. 2,448,683, Sept. 7.
Package, Match. A. O. Levine. 2,448,990, Sept. 7.
Paint can hanger. L. N. Schaller. 2,448,628, Sept. 7.
Parasiticides containing aluminum hydroxide, Preparing. H. L. Cupples. 2,448,661, Sept. 7.
Pellet container and selector. F. L. Sessions. 2,448,918, Sept. 7.
Penicillin in cotton seed meal medium, Production of. J. W. Foster and L. E. McDaniel. 2,448,791, Sept. 7.
Penicillin, The production of. J. W. Foster and L. E. McDaniel. 2,448,790, Sept. 7.
Peroxide-curable and organic peroxide-cured synthetic polyester rubbers, Organic. C. S. Fuller. 2,448,585, Sept. 7.
Phenoxyethyl lactate and a cellulose compound plasticized therewith. M. L. Fein and C. H. Fisher. 2,448,873, Sept. 7.
Photocell. R. J. Cashman. 2,448,517, Sept. 7.
Photocell. R. J. Cashman. 2,448,518, Sept. 7.
Photocell of lead sulfide. R. J. Cashman. 2,448,516, Sept. 7.
Photographic elements bearing a polyvinylpyridine sublayer, a layer containing a soluble boron compound and a silver halide synthetic hydroxyl polymer layer and their preparation. C. F. Glick. 2,448,525, Sept. 7.
Photographic elements having a silver halide layer and an antihalation layer on a polyvinylpyridine layer. F. P. Alles. 2,448,508, Sept. 7.
Photographic elements having antihalation layers composed of vinylpyridine polymers and antihalation materials. D. M. McQueen and E. C. Weaver. 2,448,542, Sept. 7.
Photographic elements having antihalation layer composed of vinylpyridine polymer with vinylpyridine polymer sublayer and outer protective layer. F. P. Alles. 2,448,507, Sept. 7.
Photographic elements having light-sensitive and water-insoluble vinylpyridine polymer layers. F. Schulze. 2,448,552, Sept. 7.
Photographic shutter, High-speed symmetrical opening. C. C. Fuerst. 2,448,876, Sept. 7.
Photographic silver halide emulsion, Optically supersensitized. B. H. Carroll and C. J. Staud. 2,448,858, Sept. 7.
Photopolymerization. M. M. Renfrew. 2,448,828, Sept. 7.
Phthalic anhydride, Recovering. W. M. Davis. 2,448,868, Sept. 7.
Picking tower. Fruit. R. R. Schutz. 2,448,630, Sept. 7.
Pin anchored electric outlet and switch. D. S. Ross. 2,448,832, Sept. 7.
Pipe coupling. F. E. Swain. 2,448,747, Sept. 7.
Pipe joint. W. R. Ost. 2,448,907, Sept. 7.
Pipe testing apparatus. A. Motycka. 2,448,820, Sept. 7.
Piperidine propanol esters of phenyl acetic acid. S. M. McElvain and T. P. Carney. 2,448,997, Sept. 7.
Piston device. C. M. Thomas. 2,448,932, Sept. 7.
Plane, Rabbet. H. G. Shaw. 2,449,015, Sept. 7.
Plate, Electrostatic condenser. J. B. Brennan and L. M. Conrad. 2,448,513, Sept. 7.
Plate, Sectional match. E. E. Reder, Jr. 2,448,827, Sept. 7.
Platform, Composite shoe. F. J. Diamant. 2,448,663, Sept. 7.
Playing bar. O. H. Yates. 2,449,032, Sept. 7.
Plug and socket, Current-regulating. L. E. Wean and L. J. McCarty. 2,449,029, Sept. 7.
Plug connector. C. F. Hart. 2,448,592, Sept. 7.
Pocket-type tissue container. W. A. J. Mitchell. 2,448,819, Sept. 7.
Polyester synthetic rubbers formed from disecondary glycols, Cured. C. J. Frosch. 2,448,584, Sept. 7.
Polyethylene-polyvinyl acetal composition. D. A. Fletcher and M. M. Renfrew. 2,448,666, Sept. 7.
Polymerization of alpha alkyl styrenes. R. G. Helligmann. 2,448,976, Sept. 7.
Polyoxypropylene compounds. H. R. Fife and F. H. Roberts. 2,448,664, Sept. 7.
Porous filter. E. A. Stokes. 2,448,930, Sept. 7.
Powder filling apparatus. D. D. Peebles and G. P. Hensley. 2,448,733, Sept. 7.
Power drive. L. Spraragen. 2,449,020, Sept. 7.
Power position hold for control valves, Automatic. H. Kirkham. 2,448,532, Sept. 7.
Power system. T. X. Lewis. 2,448,813, Sept. 7.
Power takeoff. F. D. Dale. 2,448,662, Sept. 7.
Power unit for invalid wheel chairs, Propelling. H. Love, C. E. Britain, B. D. Langton, and R. E. and C. E. Van Gundy. 2,448,992, Sept. 7.
Practice apparatus, Target. I. H. Wilsey. 2,449,030, Sept. 7.
Pressed articles from powders, Forming. J. S. Pecker and H. A. Simpson. 2,449,008, Sept. 7.
Pressure system. A. E. Kittridge. 2,448,604, Sept. 7.
Printing plate, Treated planographic. C. H. Van Dusen, Jr. 2,448,749, Sept. 7.
Process and apparatus for monitoring synchronizing generators. H. E. Beste. 2,448,762, Sept. 7.
Protective appliance, Sanitary. A. Wayne. 2,448,938, Sept. 7.
Proximity fuse testing apparatus. N. Johnson and W. E. Bradley. 2,448,889, Sept. 7.
Pulverized material, Conveying. H. Struckmann. 2,448,745, Sept. 7.
Puzzle and rack therefor, Jigsaw. S. H. Gainsley. 2,448,667, Sept. 7.
Radio range control for flight trainers, Automatic. E. M. Sorensen. 2,448,555, Sept. 7.

Rail lubricator. W. C. Heidenthal. 2,448,670, Sept. 7.
Receiver, Television. L. W. Parker. 2,448,908, Sept. 7.
Receiving system, Diversity. M. G. Crosby. 2,448,866, Sept. 7.
Record controlled machine. G. F. Daly. 2,448,781, Sept. 7.
Record-controlled printing apparatus. H. L. Tholstrup. 2,448,842, Sept. 7.
Recovery of hydrogen fluoride by distillation with an olefin. G. R. Reading and R. E. Vinyard. 2,448,620, Sept. 7.
Relay, Differential. C. P. Clare and G. Weinreich. 2,448,772, Sept. 7.
Resin and process of making same, Coated granular. E. J. Gentner. 2,448,524, Sept. 7.
Retainer, Key. R. B. French. 2,448,969, Sept. 7.
Retriever, Golf ball. R. C. Williams. 2,448,644, Sept. 7.
Riboflavin solutions. S. D. Upham. 2,449,041, Sept. 7.
Roll, Abrasive. A. E. Hamilton. 2,448,884, Sept. 7.
Rotary turbine-type hydraulic coupling. N. C. Price. 2,448,824, Sept. 7.
Rotor construction for comminuting and mixing machines. H. H. Wagner and E. G. Magnus. 2,448,849, Sept. 7.
Rotor, Turbine. N. C. Price and H. A. Greenwood. 2,448,825, Sept. 7.
Safety stand. W. C. Troendle. 2,449,024, Sept. 7.
Salt-and-pepper shaker, Combination. T. W. Ryther. 2,448,625, Sept. 7.
Salts of alkyl phenol sulfides, Preparing. C. F. Van Gilder. 2,449,026, Sept. 7.
Sanitary container for brushes. T. D. Kevin and P. B. Payne. 2,448,603, Sept. 7.
Savings bank, Fatten-the-pig. J. W. Kimball. 2,448,807, Sept. 7.
Scaffold, Adjustable. R. A. Sundeen. 2,448,746, Sept. 7.
Scraper, Pipe exchanger. T. E. Schley. 2,449,012, Sept. 7.
Screens for the reception of projected images, Forming. R. O. Walker. 2,448,560, Sept. 7.
Screw cover wrench. E. H. Mattocks. 2,448,815, Sept. 7.
Screwdriver, Impact. J. C. McCorkhill. 2,448,995, Sept. 7.
Seal, Bearing. J. M. Wisniewski. 2,448,646, Sept. 7.
Sealing means for pumping apparatus. H. W. Jeffcock. 2,448,717, Sept. 7.
Sectional weaving loom. P. G. E. A. Vanlaer. 2,448,935, Sept. 7.
Seedling planting device. H. A. Macro. 2,448,899, Sept. 7.
Self-supporting, self-adjusting electric water heater. D. D. Owens. 2,448,617, Sept. 7.
Sensing and comparing means, Record. J. J. Robbins and R. T. Blakely. 2,448,830, Sept. 7.
Servo, Smoothing. F. P. Coffin, Jr., F. E. Bothwell, and P. D. Crout. 2,449,035, Sept. 7.
Sewing machine. M. L. Cook. 2,448,774, Sept. 7.
Sewing machine. C. C. Smith. 2,449,018, Sept. 7.
Shade, Window. W. A. Harju. 2,448,800, Sept. 7.
Sharpener, Knife. B. F. Schmidt. 2,448,629, Sept. 7.
Shopping bag handle. A. J. Laus. 2,448,894, Sept. 7.
Shoulder pad filler garment hanger. C. H. Nelson. 2,448,726, Sept. 7.
Showerhead. J. Fraser. 2,448,792, Sept. 7.
Shutter operating and control mechanism, Photographic. J. Rabinowitz. 2,448,736, Sept. 7.
Signal: *See*—
Torque tool with ratchet signal.
Signaling device, Emergency. M. Dwyer. 2,448,521, Sept. 7.
Silicone compositions, Modified. H. F. Jones. 2,448,530, Sept. 7.
Size gauging device. W. F. Aller. 2,448,653, Sept. 7.
Sled, Battle. J. W. O'Daniel. 2,448,545, Sept. 7.
Sliding door lock. A. Vanderveld. 2,448,748, Sept. 7.
Slitting machine. H. E. Van Derhoef and M. P. Davis. 2,448,934, Sept. 7.
Soap greases, Aluminum. F. J. Licata. 2,448,721, Sept. 7.
Solar water heater. E. E. Zideck. 2,448,648, Sept. 7.
Solenoid with armature. J. G. Oetzel. 2,448,727, Sept. 7.
Solenoid with plunger and latch. D. Conlan. 2,448,959, Sept. 7.
Spark gap device. E. R. Capita. 2,448,576, Sept. 7.
Sprayer, Nasal. J. F. Hunter. 2,448,803, Sept. 7.
Stabilization of photographic emulsions. W. L. Brice. 2,448,857, Sept. 7.
Stable colloidal solutions of metal sulfides, Preparing. F. F. Schwartz. 2,448,740, Sept. 7.
Stadia instrument, Automatic recording. D. H. Drayer. 2,448,965, Sept. 7.
Stand: *See*—
Safety stand.
Stand for supporting cable-thimble vise vertically or horizontally, Rotatable. R. M. Leveira. 2,448,535, Sept. 7.
Steel, Heat-treating and cold-rolling Hadfield manganese. C. W. Weesner, W. B. Lethingwell, E. R. Babylon, and H. L. Schell. 2,448,753, Sept. 7.
Steering linkage. J. J. Wharam and F. G. Loon. 2,448,851, Sept. 7.
Steering mechanism, Vehicle. W. H. Briggs. 2,448,701, Sept. 7.
Stem and socket combination. R. L. Hough. 2,448,980, Sept. 7.
Step bearing for gyratory crushers. C. C. Van Zandt. 2,448,936, Sept. 7.
Stop assembly, Rocket. W. H. D'Ardenne. 2,448,962, Sept. 7.
Stopper press die. J. O. Reid. 2,448,911, Sept. 7.
Strand and fabric, Composite. A. H. Davis. 2,448,782, Sept. 7.
Strap extender. L. L. Steigerwald. 2,448,839, Sept. 7.
Stripping in butadiene extraction. R. A. Given and W. S. Craft. 2,448,971, Sept. 7.
Styrenes, Preparation of substituted. C. E. Morrell and O. C. Slotterbeck. 2,449,004, Sept. 7.
Suction mold. A. E. Smith. 2,448,632, Sept. 7.
Sulfonamido disazo dye. C. F. H. Allen, C. V. Wilson, and G. F. Frame. 2,448,853, Sept. 7.
Support: *See*—
Adjustable eaves trough support. Dynamic damper support.
Surge generator. S. D. Livingston. 2,448,897, Sept. 7.
Surgical instrument, Endoscopic. W. W. Scott and A. Lutz. 2,448,741, Sept. 7.
Suspending agent for beverages. K. W. Karnopp. 2,448,599, Sept. 7.
Suspending device. G. Greenberg. 2,448,588, Sept. 7.
Switch: *See*—
Electric control switch. Pin anchored electric outlet and switch. Electric switch.
Switch. C. E. Mosley. 2,448,615, Sept. 7.
Switch mechanism for automatic stokers. G. W. Crise. 2,448,779, Sept. 7.
Switch with leakage compensation, Duplex. C. F. P. Rose. 2,448,623, Sept. 7.
Swivel, Fishing line. C. M. Brown. 2,448,954, Sept. 7.
Table: *See*—
Vertically adjustable bookkeeper's table.
Telemetric indicating system, Electrical vernier type. C. A. De Giers and L. M. Campani. 2,448,783, Sept. 7.
Terminal for vacuum tubes, Contact. S. J. Koch. 2,448,808, Sept. 7.
Tester, Hardness. W. A. Williams. 2,448,645, Sept. 7.
Therapeutic composition. R. L. Libby. 2,449,039, Sept. 7.
Thermal-mechanical element. H. Dickinson. 2,448,784, Sept. 7.
3-(2',6'-dimethylpiperidino)-propyl salicylate and acid addition salts thereof. S. M. McElvain and T. P. Carney. 2,448,998, Sept. 7.
3-(2'-methyl piperidino)-propyl-p-n butoxy benzoate and acid addition salts thereof. S. M. McElvain and T. P. Carney. 2,448,996, Sept. 7.
3-substituted benzotetronic acid and salts thereof, Preparation of. M. E. Hultquist. 2,449,038, Sept. 7.
Ticket holder. B. P. Mayo. 2,448,900, Sept. 7.
Toolholder for lathes. W. A. Gile. 2,448,586, Sept. 7.
Torch, Lighting. F. R. Rizer. 2,448,622, Sept. 7.
Torque tool with ratchet signal. H. W. Zimmerman. 2,449,034, Sept. 7.
Tracking aiming mechanism, Aided. P. J. McLaren. 2,448,612, Sept. 7.
Transmission. E. E. Eaton. 2,448,872, Sept. 7.
Transmission and control mechanism therefor, Motor vehicle. F. R. McFarland. 2,448,678, Sept. 7.
Transmission, Variable-speed. L. E. Jones. 2,448,598, Sept. 7.
Trap: *See*—
Animal trap.
Trap. J. Patrick. 2,448,618, Sept. 7.

Tube: *See*—
Electron discharge tube.
Tube cutter. E. E. Condon. 2,448,578, Sept. 7.
Tube expander. N. Brackett. 2,448,512, Sept. 7.
Tuner. F. Wilburn. 2,448,642, Sept. 7.
Tuning unit, Ultra high frequency. N. T. Simopoulos. 2,448,554, Sept. 7.
Tunnel balance, Wind. H. M. Heuver. 2,448,528, Sept. 7.
Uncapper, Honeycomb. D. S. Crane. 2,448,775, Sept. 7.
Unloading device for mobile tractors. R. L. Woodward, Jr. 2,448,944, Sept. 7.
Valve: *See*—
Duplex four-way valve. High-low gas valve.
Valve. S. H. Edwards. 2,448,706, Sept. 7.
Valve. J. Roberts. 2,448,913, Sept. 7.
Valve for rock drills. H. O. Fossum. 2,448,875, Sept. 7.
Valve with operating position hold, Control. W. T. Stephens. 2,448,577, Sept. 7.
Vanilla flavor, Synthetic. C. Levy. 2,448,896, Sept. 7.
Vertically adjustable bookkeeper's table. W. F. Graeske. 2,448,710, Sept. 7.

View finder, Collapsible. G. P. Silberstein. 2,448,920, Sept. 7.
Vise, Cable splicing. F. J. Surk. 2,448,636, Sept. 7.
Vortex flow by pressure waves, Control of. E. N. Fales. 2,448,966, Sept. 7.
Wall structure, Prefabricated double. E. G. Stack. 2,448,926, Sept. 7.
Wall vessel, Double. R. A. Gulick. 2,448,589, Sept. 7.
Welding machine, Dental. N. Crombach. 2,448,865, Sept. 7.
Welding rod holder. A. W. McClary. 2,448,994, Sept. 7.
Wheel cover. G. A. Lyon. 2,448,536-7, Sept. 7.
Wheel feeding mechanism, Hydraulically operated. C. G. Flygare and C. G. Alvord. 2,448,874, Sept. 7.
Wheel for looms, Hand. A. C. Krukonis. 2,448,811, Sept. 7.

Window lift and fastener. A. Hoekstra. 2,448,977, Sept. 7.
Window regulator for automobiles and the like. L. S. Greenmun. 2,448,796, Sept. 7.
Window with revolving sash, Round. G. A. Brinson. 2,448,764, Sept. 7.
Wing and tail-plane elements of an airplane, Controlling the operation of. W. J. Hampshire. 2,448,712, Sept. 7.
Wire fabric, Fabricating welded. T. H. Wickwire, Jr. 2,448,941, Sept. 7.
Wrench: *See*—
Screw cover wrench.
Wrench for screw calks, Adjustable detent. B. Ingram. 2,448,805, Sept. 7.
Wrench having a pivoted yoke carrying an adjustable jaw, Pipe. L. C. Mead. 2,448,999, Sept. 7.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 7, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE WAITE ET AL.

No. 5427. Decided May 4, 1948

[168 F.2d 104; 77 USPQ 586]

1. PATENTABILITY—INVENTION—CHANGE IN PROPORTIONS.
   Although it may be conceded that appellants have set out proportions of ingredients in the appealed claims, either specifically or by reference, which are not specifically disclosed by the prior art cited, *Held* that it is the rule that while a change in the proportions of an old combination may be inventive under some circumstances, it is not so unless the change be critical as compared with the proportions used in the old combination.
2. SAME—SAME—SAME—CRITICALITY.
   Held that one alleging a critical difference (that is a difference in kind as distinguished from a difference in degree) growing out of claimed proportions of ingredients must establish such criticalness by proof.
3. SAME—SAME—REFERENCE TO CLAIMS ALLOWED OTHERS.
   Held that this court will not allow rejected claims simply because similar claims may have been allowed by tribunals of the Patent Office in some other application, or even in the particular applications under consideration.
4. SAME—MILL ADDITION OPACIFIER.
   Certain claims to a mill addition opacifier and to the method of manufacturing the same *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 446,976.

AFFIRMED.

Roy F. Steward (*Elmer Stewart* of counsel) for Waite et al.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

Appellants seek review and reversal of the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting the twenty-eight claims of their application relating to alleged new and useful improvements in vitreous enamel opacifiers, "more particularly to compositions suitable for use as mill addition opaquing or opacifying agents, in conjunction with pre-smelted enamel frit and other constituents of an enamel mix, for production of white vitreous or porcelain enamels especially." No claims were allowed.

All the claims were rejected for lack of invention over prior art cited and claims 7, 15 to 18, inclusive, and 24 to 27, inclusive, were additionally rejected as being indefinite.

The appealed claims are numbered 1 to 7, inclusive, and 9 to 29, inclusive.

Claims 1 to 7, inclusive, and 15 to 29, inclusive, are process claims. It is noted that all the process claims after claim 1, except claims 28 and 29, refer to that claim. Each begins with the phrase "The process defined by claim 1."

Claims 9 to 14, inclusive, cover the product and each of those claims after 9 refers to it in the opening phrase, "A mill addition opacifier as defined in claim 9."

The following descriptive matter appears in the decision of the Board:

> The application relates to the manufacture of opacifiers for use in making vitreous enamel. The opacifier is used as "a mill addition" product and, as stated by appellants, is to be usually manufactured and supplied to enamelers for the purpose of being added to the mix that is smelted in producing the glass, which subsequently constitutes the bulk of the vitreous enamel coating. The opacifier, as covered in the numerous process and product claims, includes a mix capable when calcined of yielding a product consisting of three essential components, namely, calcium oxide, antimony pentoxide and titanium oxide. In some instances, as recited in many of the claims on appeal, calcium fluoride is added for the purpose of avoiding an undesirable yellow tinge in the finished vitreous enameled product. Some of the claims are drawn to the process of manufacturing the mill addition opacifiers and some to the opacifiers as a product. Many of them include the additional feature of washing the calcined product with water and dilute acid and all of them except 28 and 29 are limited to various different proportions of the oxides recited in the claims.

It is noted that claims 28 and 29 specify oxides of calcium, antimony and titanium, but do not designate the proportions as is done in the other claims. According to the statement of the Primary Examiner, the opacifier material, which is used for rendering the enamel opaque, is mill added in the grinding of the enamel frit.

As illustrative of the claims on appeal the Board quoted 1, 9, and 29 which read as follows:

> 1. The process of manufacturing compositions useful as mill addition opacifying agents in the production of vitreous or porcelain enamels, which comprises calcining material consisting essentially of intimately commingled oxides of calcium, antimony and titanium in finely divided condition, said oxides being so proportioned in the mix as to give a calcined product having a composition characterized by a predetermined correlation between the numerical values of the basicity ratio
>
> $$\frac{(TiO_2+Sb_2O_5)}{CaO}$$
>
> and the titanium-antimony ratio
>
> $$\frac{(TiO_2)}{Sb_2O_5}$$
>
> respectively, said numerical values lying within the total area represented by Area A plus Area D on the accompanying graph hereinbefore described, and by a molar proportion of antimony pentoxide within the range 0.10 and 0.90 when the molar proportion of calcium oxide is taken as 1.0.
>
> 9. A mill addition opacifier useful in preparing vitreous or porcelain enamels, consisting of the product of calcining an intimate mixture of oxides of calcium, antimony and titanium at reacting temperatures insufficiently high

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

to smelt the mixture, the mixture being so proportioned that, in the calcined product, the basicity ratio

$$\frac{(TiO_2 + Sb_2O_5)}{CaO}$$

and the titanium-antimony ratio

$$\frac{(TiO_2)}{Sb_2O_5}$$

have numerical values which lie within the total area represented by Area A plus Area D on the accompanying graph hereinbefore described, and which bear a predetermined relation to one another, and the molar proportion of antimony pentoxide is not less than 0.10 nor more than 0.90 when the molar proportion of calcium oxide is taken as 1.0; enamel produced with such opacifier under standard test conditions having a reflectance value not more than 3 per cent lower (R-diff) than an enamel produced under the same conditions except for the use of tin oxide as opacifier.

29. In a process of manufacturing mill addition opacifiers which includes calcining a mix capable of yielding a calcined product consisting mainly of three essential components, calcium oxide, antimony pentoxide and titanium oxide, in intimate association, the further steps of washing said calcined product, first with dilute acid and then with water, to remove soluble base or alkaline material therefrom, followed by drying and pulverizing.

There were cited as references page 270 of a 1935 publication by Andrews (no other name given), relating to enamels, and the following patents: Harshaw et al., 2,033,707, March 10, 1936; Harshaw et al., 2,199,794, May 7, 1940; Harshaw et al., 2,200,170, May 7, 1940; McIntyre et al., 2,189,148, Feb. 6, 1940.

Claims 28 and 29 require consideration apart from the other claims.

We do not understand appellants to contend that any one of the process claims 2 to 7, inclusive, and 15 to 27, inclusive, is allowable unless claim 1 be found to be so, nor do we understand it to be contended that any one of the product claims 10 to 14, inclusive, is allowable unless product claim 9 be found to be so. On the other hand, if process claim 1 be found allowable, process claims 2 to 7, inclusive, and 15 to 27, inclusive, should also be allowed, and if product claim 9 be found allowable, product claims 10 to 14, inclusive, should also be allowed.

In view of this situation we do not deem it necessary to discuss in detail appellants' grouping arrangement of the claims in which they place claims 1 and 9 in a first group; claim 3 in a second group; claims 4 and 12 in a third group; claims 5 and 13 in a fourth group; claims 6 and 14 in a fifth group; claims 2, 10, 20–29 in a sixth group; and claims 7, 16–19 and 24–27 in a seventh group.

Many of the groups so designated seem to be based upon what are referred to as "Areas" shown in a drawing in the form of a graph and referred to in appellants' specification in connection with proportion ranges of the ingredients of the mix. This matter is hereinafter discussed as is the step of "washing" upon which appellants' group 6 appears to have been based in part.

Following the example of the Board, we first consider the broad claims 28 and 29, and what is said with respect to them will have application to certain phases of the controversy respecting other of the claims.

It will be borne in mind that both those claims disclose the use of the three essential oxide compositions—calcium, antimony and titanium—but does not disclose any specific proportions. Claim 13 of the Harshaw et al. patent, 2,199,794, reads:

13. A mill addition opacifier for vitreous enamels, the same being a calcination product and containing CaO, CaF_2, Sb_2O_5 and TiO_2 in approximately the proportions:

	Parts by weight
Calcium compounds	23 to 52
Antimony oxide	44 to 46
Titania	32 to 34

calcium fluoride being present to the extent of at least five parts by weight.

That clearly anticipates appealed claims 28 and 29, except for the washing provision of those claims. As to that feature there is some slight confusion as to the record showing, and it may be said that this matter is involved with respect to the twelve claims identified in appellants' group 6, as well as in claims 28 and 29.

In the brief for appellants it is said, in substance, that the prior art relied upon is devoid of any suggestion of washing a calcined opacifier composition of any kind "much less one produced as set forth and consisting essentially of calcium, antimony and titanium oxides."

The Primary Examiner who first listed the Andrews publication as a reference, in his statement following the appeal to the Board, said:

The function of washing in some of the claims is known, obvious and matter of choice. See Andrews page 270.

That is the only mention of Andrews in the Primary Examiner's statement, but the Board says flatly "The Primary Examiner states that the washing step is disclosed in the Andrews publication." Whether the Board thought it was so disclosed is not clear, but it is our impression that, as is suggested in the brief of the Solicitor for the Patent Office, it "proceeded to a decision without relying upon the publication." Its statement reads:

However, as stated above, we do not believe that any invention is involved in washing a calcined product to remove the alkaline material by using dilute acid and water since these steps are conventional in all processes of the character with which the application before us is concerned.

In our examination of the excerpt from the Andrews publication we fail to find anything which seems to us to admit of the interpretation that it discloses a washing step, but this is not conclusive of the issue upon this phase of the controversy.

As a matter of fact, we are not quite certain as to the extent of appellants' reliance upon the washing feature of the several claims in which it appears. The brief on their behalf states, "• • • while it is not an absolutely indispensable feature of appellants' broad invention, it is commonly of great practical advantage and, therefore, constitutes a part of the manufacturing process in what is regarded as the optimum embodiment of the invention." If appellants did, in fact, rely upon it—and, as has been indicated, it seems to be the only step upon which any reliance could be placed as to claims 28 and 29—it is our view that they should have taken action under Patent Office Rule 66 when the Primary Examiner rejected the claims independently of any reference, as he, in effect, did when he said "There is nothing unobvious seen in washing to remove soluble materials (e. g. claims 2, 8 [not now involved] and 10)."

It would seem that appellants might have required verification of the Primary Examiner's assertion by affidavit under Patent Office rule 66 and might have traversed it under rule 76, but this was not done. The holding of the Primary Examiner made seemingly upon the basis of his personal knowledge and without reference to the Andrews publication or other prior art is not shown to have been challenged before the Board, and we do not regard the holding of the Board as to the nonpatentability of the washing step as being actually at issue here in any of the claims of which that step constitutes a part. Clearly claims 28 and 29 were properly rejected.

The main issue with respect to all the claims except 28 and 29 relates to the question of the proportions of the various ingredients used in the mix.

It has been stated that each of the prior art patents discloses the use of the three basic oxide ingredients, that is oxides of calcium, antimony and titanium, and, it may be added, that with the exception of the patent to Harshaw et al., No. 2,033,707, each patent shows calcium fluoride also. The formulas are recited in the brief of the Solicitor for the Patent Office as follows (omitting page references):

The patent to Harshaw et al., 2,033,707 • • • relates to a vitreous enamel opacifier of CaO, Sb_2O_5, and TiO_2 in predetermined correlation.

The patent to McIntyre et al., 2,189,148 • • • relates to an opacifier including CaO, Sb_2O_5, TiO_2, and CaF_2.

The patent to Harshaw et al., 2,199,794 • • • relates to an opacifier for vitreous enamels including CaO, Sb_2O_5, TiO_2, and CaF_2 in predetermined correlation. It discloses a process for making the opacifier including calcining a mix • • •.

The patent to Harshaw et al., 2,220,170 • • • relates to an opacifier for vitreous enamels including CaO, Sb_2O_5, TiO_2, and CaF_2 in predetermined correlation.

The formulas, of course, are the same as the formulas of appealed claims 1 and 9, supra, except that calcium fluoride is not included in claims 1 and 9. It is, however, named as an ingredient, evidently affecting color, in a number of the other claims.

It seems to us that claims 1 and 9 (upon which all the other respective process and product claims depend) are rendered highly technical by the recitals therein respecting areas outlined on the graph, or drawing, which constitutes a part of the application. The brief on behalf of appellants declares:

It is possible to express the correlation of said proportioning factors in rectangular coordinates for the purpose of plotting specific opacifier compositions of the 3-essential-oxide type (i. e. consisting of the oxides of calcium, antimony and titanium) on a graph, so that the relation of the large number of appellants' new opacifiers to the very few of generally similar type actually disclosed by the prior art may be visually apparent. Any of several equivalent forms or systems of such rectangular coordinates may be used for the purpose, but with some the plotted points would be so crowded together as to be confusing. That adopted for the graph constituting the present application drawings • • • maintains the plotted compositional points reasonably well apart and was chosen for the greater clarity it affords.

The Board discussed the graph as follows:

The drawing accompanying the application on appeal illustrates the proportions and the various areas designated on the diagram are referred to in the claims either by defining the limits of the areas or by reciting them by their designating letters. The diagram is not of the usual character for designating the proportions of a three-element mixture such, for example, as a ternary diagram whereby the proportions may be more appropriately illustrated. Instead, the diagram utilizes for the unit of its vertical axis the molecular ratio of the titanium oxide and the antimony pentoxide and for the unit of its horizontal axis the molecular ratio of the sum of the titanium oxide and antimony pentoxide to the calcium oxide. This ratio is termed by applicants a "basicity ratio" and appellants note in their application that as the numerical value of the "basicity ratio" increases, the actual chemical basicity of the opacifier product decreases. This is for the obvious reason that applicants have elected to utilize the basic element CaO as the denominator of the fraction designating the ratio. This manner of designating the proportions of the oxides forms a diagram which, as held by the Primary Examiner, is distorted by expansion as compared with a simple diagram and this is suggested in the brief for appellants, who state that this form of diagram was adopted to maintain the plotted compositional points well apart. On this diagram a limited area L—L' and the point M are said to designate the field of proportions disclosed in the prior art. Applicants have designated various areas A, B, C and D, the broadest area A and D together constituting an area representing proportions practically surrounding the proportions disclosed in the prior art of record as indicated on the diagram. Areas B and C are specific areas within area A and are said to be preferred by applicants.

It appears to have been the view of the Primary Examiner, approved by the Board that appellants merely selected "fields of proportions of the oxides outside of the field of the prior art" and that "nothing unobvious or critical is shown to flow from such departure from the field of the art."

The Primary Examiner declared:

Applicants are not seen to have made such comparisons as show that the area of the art on the drawing may not as well be used as the field laid by applicants as their invention. Applicants have made no showing of tests from the field in which the references fall.

[1] Without entering into details it may be conceded that appellants have set out proportions of ingredients in the appealed claims, either specifically or by reference, which are not specifically disclosed by the prior art cited, but it is the rule that while a change in the proportions of an old combination may be inventive under some circumstances, it is not so unless the change be critical as compared with the proportions used in the old combination. In the case of *In re Dreyfus*, 22 CCPA (Patents) 830, 73 F.2d 931, 24 USPQ 52, 453 O. G. 961, a question was presented as to whether there was invention in increasing the number of parts of alkali per one part of water. Under the facts there appearing, we declared:

This is a very technical question, and before we would be warranted in reversing the decision of the Board of Appeals we think it should appear from the record that the increased proportion of alkali disclosed by appellant over that disclosed by Lilienfeld produces a result different in kind from the result produced by the process disclosed by Lilienfeld, and not merely different in degree.

The case of *In re Bergen*, 28 CCPA (Patents) 1184, 120 F.2d 329, 49 USPQ 749, 530 O. G. 502, is of similar purport.

We do not overlook the fact that here it is contended on behalf of appellants that criticalness has been demonstrated and we have carefully reviewed appellants arguments on that phase of the controversy.

[2] It is said at one point in the brief on behalf of appellants that they "went directly counter to, and eventually disproved, at least three teachings and beliefs of the prior art respecting 3-oxide opacifier compositions generally." The three teachings claimed to have been disproved are stated in the brief as follows:

(1) That certain other oxides are "equivalents" for calcium oxide and titanium oxide in such compositions,

and can be substituted therefor more or less indifferently without unfavorably affecting the character of the opacifiers.

(2) That the titanium oxide content was responsible for the yellowing tendency of such opacifiers, and that hence the proportion of titanium in the opacifier must not be so large as to result in a mole ratio of the titanium oxide content to the antimony oxide content that is substantially greater than about 3 : 1.

(3) That increasing the antimony oxide content tends to lower the opaquing power of the opacifier.

We fail to discern wherein appellants' discovery that certain oxides which the prior art indicated might be equivalents for calcium and titanium oxides could not, in fact, be satisfactorily substituted for them, has any bearing upon the patentability of the appealed claims. The brief of the Solicitor for the Patent Office aptly states:

> • • • the teachings alleged to have been disproved relate, not to the ingredients disclosed as being suitable for the mix to make an opacifier, but relate to the results thought by the respective patentees to flow from the particular ingredients individually. Whether they were right or wrong on their theories of why their alleged inventions worked the way they did is immaterial on the point of their disclosures of the particular ingredients mentioned as suitable for a mix for making opacifiers. *In re Modine*, 19 CCPA 1058, 57 F.2d 355 [12 USPQ 88]; *In re Ebert et al.*, 19 CCPA 1087, 57 F.2d 356 [13 USPQ 124].

It is asserted in appellants' brief:

> The boundaries of the areas on the graph corresponding to the limitations in appellants' claims are critical in the sense of providing a reasonably definite line of demarcation between appellants' invention on the one hand and, on the other, the prior art and undesirable or inoperative compositions.

We do not understand that by this appellants imply that the compositions embraced in the prior art are, as a whole, undesirable or inoperative. Rather, as we understand it, the meaning is that in some instances the particular proportions of the ingredients recited in the patents were found to be undesirable—possibly, from some standpoints (e. g. the color resulting from their use), inoperative. As to this, a difference of result in kind as distinguished from a difference in degree is not established merely by showing a change in proportions of ingredients, and we are not convinced that appellants have otherwise established the accomplishment of a result different in kind from the disclosure of the prior art. In *In re Selmi et al.*, 33 CCPA (Patents) 1187, 156 F.2d 96, 70 USPQ 197, 591 O. G. 160, we held (citing *In re Swenson et al.*, 30 CCPA (Patents) 809, 132 F.2d 1020, 56 USPQ 372, 549 O. G. 200) that one alleging a critical difference (that is a difference in kind as distinguished from a difference in degree) growing out of claimed proportions of ingredients must establish such criticalness by proof. That ruling has not been complied with in the instant case.

The Board said inter alia:

> The Primary Examiner points out that the diagram discloses that as the areas said to designate the prior art proportions are approached, a greater number of points indicating satisfactory results are found. In addition we note, for example, that the most remote point indicating a satisfactory experiment noted on the diagram indicating a basicity ration of about 4.46. How this experiment warrants the extension of the area staked out by applicants up to 5.0 on the diagram is not apparent. It is further noted that in the diagram rather widely scattered points within the areas selected by applicants indicate proportions said to illustrate successful experiments. There is nothing of record, however, to indicate that every other proportion within the areas will result in satisfactory or superior opacifiers. It is apparent therefore that applicants, on the basis of the several experiments, have not accurately determined the limits of the areas by experimentation. Likewise, it does not follow because some of the points within the areas selected by applicants represented successful proportions, that all of the points within the areas designated on the diagram represent successful proportions. We therefore agree with the position of the Primary Examiner that the contribution of applicants merely consisted in casting about in the field of proportions surrounding the prior art field for other proportions and, that, on the basis thereof, they have staked out areas avoiding the prior art.

As we understand the view of the Board of Appeals, it is that appellants have not opened up a new field of satisfactory three-oxide mill addition opacifier compositions, but that they merely cast about "in the field of proportions surrounding the prior art field," and by experimentation found some proportions differing from the prior art proportions which would work as well or possibly even better in degree than such prior art proportions, and "staked out" areas which they seek to monopolize although it has not been demonstrated that their proportions cover all the points within such staked out areas. The effect of the allowance of the appealed claims, therefore, would be to close the entire field and shut the public out from further experimentation such as is now open to it under the patents, without appellants having, in fact, contributed new matter to the art.

We fail to find any reason or reasoning which, in our opinion, would justify a reversal of the decision.

Reference is made in appellants' brief to alleged commercial success. We do not regard that matter as one necessary to be considered in this case, but even if it were, the affidavit concerning it seems to relate to a companion application and not to the one under consideration.

[3] Appellants also refer to some other patents which have been granted to other parties, and assert that they "afford further convincing evidence of the patentability of appellants' process and product."

We apprehend that there is no rule of patent law more firmly settled, nor any which has been more frequently stated, than the rule that this court will not allow rejected claims simply because similar claims may have been allowed by tribunals of the Patent Office in some other application, or even in the particular application under consideration. *In re Lee et al.*, 31 CCPA (Patents) 768, 139 F.2d 717, 60 USPQ 202, 560 O. G. 386; *In re Haller*, 34 CCPA (Patents) 1003, 161 F.2d 280, 73 USPQ 403, 603 O. G. 529.

[4] In view of our conclusion upon what obviously is the main issue in the case, which applies to all the appealed claims, we regard it unnecessary to pass upon the rejection of claims 7, 15, 16, 17, 18, 19, 24, 25, 26, and 27 upon the ground of indefiniteness, nor is it necessary to discuss minor collateral questions the determination of which would have no bearing on the result.

For the reasons indicated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

REMBOLD *v.* CONNOR

No. 5450. Decided June 1, 1948

[— F.2d —; 78 USPQ 65]

1. INTERFERENCE—PRIORITY—CARDS FOR CLASSIFICATION PURPOSES.

Held that, in our study of the evidence, we have found nothing which would justify a reversal of the decision of the Board of Interference Examiners upon the matter of reduction to practice, and, therefore, the decision of the Board awarding priority to the appellee, the junior party, is affirmed.

2. SAME—CONCEPTION.

Where one of the material features of the count is the notching or slotting of the cards and appellant's testimony states that he did this upon the cards which constitute his Exhibit A with a pen knife, but he did not state when he did it, and where the Board of Interference Examiners held that this exhibit is sufficient to establish conception of the invention in issue and existence of the cards, Exhibit A, in 1940, *Held* that in the absence of any definite showing that the cards were notched by, or for appellant in 1940, it may well be questioned whether conception, as that term is understood in patent law, occurred in 1940.

APPEAL from the Patent Office. Interference No. 81,776.

AFFIRMED.

Boyken, Mohler & Beckley (*C. Willard Hayes* and *John J. Darby* of counsel) for Rembold.

Oscar A. Mellin (*Raymond W. Colton* of counsel) for Connor.

GARRETT, *P. J.*:

The party Rembold seeks reversal of the decision of the Board of Interference Examiners of the United States Patent Office, awarding priority to the party Connor upon the single count involved in Interference No. 81,776, which reads:

> 1. A stack of cards for classification purposes, each having a first row of coded perforations closely adjacent one edge thereof and a second row of similar perforations adjacent to and parallel with said first row, said perforations in each card being disposed in groups of eight with four perforations from each row in four pairs respectively in alignment in direction at right angles to said edge, card identifying means for sequence sorting comprising a pair of notches in said edge of certain of said cards terminating in a pair of openings in said first row only and in certain of said groups, identifying means for direct selection of cards from said stack comprising the aforesaid pairs of notches and a single notch in said edge to a single perforation in the second row of one only of certain others of said groups, any group of said perforations in any one card having one of said pairs of perforations notched out being different from any other group of said perforations in the same card having such single perforation slotted out, similar means identifying each of said four pairs of perforations but distinguishing each of said four pairs from each other, the said four pairs in each group being respectively identified by the printed numerals 7, 4, 2, 1.

The Board described the material subject matter of the count as follows:

> This interference relates to cards having coded perforations punched in their margins so that the desired cards may be extracted from the stack or that the cards, by proper manipulation, may be arranged in sequence. The cards have a pair of parallel rows of perforations along one or more edges of the cards. For direct extraction a single perforation is slotted out to the edge of the card and extends through two perforations, and for sequential sorting a pair of notches extending only to the first row of perforations is utilized. The actual sorting is accomplished by inserting needles through the perforations at the appropriate positions.

Rembold's application, Serial No. 522,440, was filed February 15, 1944; that of Connor, Serial No. 532,525, was filed April 24, 1944. Connor being the junior party it was incumbent upon him to establish priority by a preponderance of evidence.

It was held by the Board that Connor established conception and reduction to practice in December of 1941. That holding is acquiesced in by Rembold, the brief on his behalf filed before us stating:

> Rembold has no quarrel with the finding of the Board with respect to Connor Exhibit 10 and does not challenge the finding that Connor reduced the invention to practice in December 1941.

In view of this concession it is unnecessary for us to discuss in detail the evidence on behalf of Connor. He makes no claim to any earlier date.

With respect to Rembold, the Board said:

> Rembold relies on the set of cards, Rembold Exhibit A, for conception and reduction to practice in 1940. The corroborated evidence is deemed sufficiently convincing to establish conception of the invention in issue and existence of the cards, Exhibit A, in 1940.
>
> Rembold urges that the testimony of the witness Rentmeister provides adequate corroboration of the successful use of the Exhibit A cards in 1940, thus establishing a reduction to practice at that time.
>
> Rentmeister did testify that he manipulated the Exhibit A cards in 1940 to perform both direct and sequence sorting but he did not say whether or not he considered the operation of the cards as satisfactory. As a matter of fact, he admitted on cross-examination that the cards did not function very well because of the sharp prong of paper left when more than one hole was notched out, and that a punch was made at a much later date which would eliminate this difficulty.
>
> Rembold himself also testified that the projection between the two holes as in card 17 of Exhibit A was objectionable and held up the commercial production of this type of card • • •.
>
> There is no satisfactory evidence of any further work in the Exhibit A type of card between 1940 and 1943 when work was started on the commercial production of the improved form of Exhibit A in which the projection was eliminated. The patent application on the cards in issue was not filed until February 15, 1944 although several applications on related devices were filed in the period between 1940 and 1943.
>
> On the above showing we are unable to conclude that Rembold had reduced the invention in issue to practice by a satisfactory and successful use thereof prior to Connor's reduction to practice in December 1941; nor can we conclude that he was exercising due diligence in reducing to practice beginning just prior to Connor's entry into the field in December of 1941.

As we view the case, the only question involved is one of fact.

[1] In our study of the evidence, we have found nothing which would justify a reversal of the Board's decision upon the matter of reduction to practice.

Our only doubt is as to the correctness of its award of conception to Rembold in 1940. It is questionable whether its conclusion as to reduction to practice is consistent with its award of conception.

[2] One of the material features of the count is the notching or slotting of the cards. Rembold testified that he did this upon the cards which constitute his Exhibit A with a pen knife, but he did not state when he did it. As stated in the brief on behalf of Connor, "There is no evidence or testimony of any nature in this record that establishes the date when the slots were cut into the cards of Exhibit A."

In the absence of any definite showing that the cards were notched by, or for, Rembold in 1940, it may well be questioned whether conception, as that term is understood in patent law, occurred in 1940.

The decision of the Board is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE BRONSON ET AL.

No. 5331. Decided June 1, 1948

[— F.2d —; 78 USPQ 63]

1. PATENTABILITY—METHOD OF WAVING HAIR.

Where the wording of the appealed claims does not positively and unequivocally limit the claims to what is the essence of appellants' contribution to the art, i. e., that the heating current be disconnected from the heating element after the initial conversion of the waving solution into steam, *Held* that the language of the claims is broad, and that, when so considered, the claims do not distinguish over the references.

2. RULE 41—GENUS AND SPECIES—METHOD AND APPARATUS.

Though a generic method claim and a specific method claim have been allowed, the specific method claim being performed by means of apparatus, such as defined in the appealed apparatus claims, *Held* that, since the rejected apparatus claims do not contain the patentable limitation of the method claims, it cannot be said that they are directed to the same inventive subject matter as the allowed method claims, and *Held* that, therefore, it is not possible to designate the apparatus claims as species of any allowed method claim.

3. SAME—SAME—REQUIREMENTS.

Held that in patent law it is axiomatic that if claims are to be considered as being in the same genus and species relationship, they must fall into the same statutory class; that a genus claim must be for the same combination of elements as the species claims and define broadly the elements or steps which are variants in the several species, and that a generic claim should include no material element in addition to those recited in the species claims and must comprehend the organization covered in each of the species claims.

4. SAME—SAME—METHOD AND APPARATUS.

Held that the apparatus claims on appeal cannot be considered to be species of any method claims, because the invention defined by the claims are in different statutory classes.

APPEAL from the Patent Office. Serial No. 471,694.

AFFIRMED.

Kwis, Hudson, Boughton & Williams (*Lee L. Townshend, A. J. Hudson*, and *W. D. David* of counsel) for Bronson et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming the final rejection by the Primary Examiner of five claims of appellants' application for a patent, Serial No. 471,694, filed January 8, 1943, for a "Method of and Apparatus for Waving Hair." Method claims 3 and 8 were rejected as unpatentable over the prior art. The other claims involved in this appeal, claims 20, 21, and 22, which are in apparatus form, were rejected as not readable upon the elected species. Five method claims and three apparatus claims have been allowed.

Appellants' application relates to and describes a method of and an apparatus for waving hair in the form of the well-known "permanent wave." Strands of hair to be curled are wound upon a curler and treated with a suitable waving solution either before or after the said winding. The hair thus wound is then enclosed by a heat-insulated housing within which is a resistance heater, or an induction coil may be outside the housing. Sufficient heat is said to be generated by either of those means within from about five to about thirty seconds to convert the water of the waving solution into steam. The waving operation is completed by means of the residual heat retained in the heating element and the housing in from four to ten minutes after the application of heat has been stopped.

Claims 3 and 8 read as follows:

3. The method of permanently waving hair which comprises winding and tensioning a strand of hair on a curler, enclosing the wound strand and a waving solution in an enclosure, and electrically supplying a sufficient charge of heat to the assembly within a brief interval of time not exceeding thirty seconds to convert the solution into steam and to complete the waving of the strand.

8. The method of waving hair which comprises enclosing a wound and tensioned strand of hair, a waving solution and a heating element adapted to be electrically heated in a heat-insulated steam-retaining enclosure to form an assembly capable of storing sufficient heat to maintain the solution in the form of steam for a long enough period to complete the permanent waving of said strand, and introducing into said assembly the heat necessary to complete the permanent waving by electrically supplying heat-producing energy to said heating element for a period not to exceed thirty seconds.

Claim 20 is representative of the apparatus claims, and reads as follows:

20. In hair waving apparatus, a plurality of cooperating non-metallic members adapted to form an enclosure for a wound strand of hair, a metallic heating element in said enclosure, a wire coil adapted to be temporarily brought into surrounding relation to said enclosure, and means for supplying high-frequency current to said coil for inductively heating said heating element.

The references relied upon in the rejection of claims 3 and 8 are Slavick, 1,939,323, December 12, 1933; Freudenberg et al., reissue 21,994, January 6, 1942.

The Slavick patent relates to a method and a device for waving hair. In the method of the patent, a waving solution is applied to a strand of hair which is then wound tightly upon a curler. Then the strand thus wound is placed in a casing in which there is a resistance heating element spaced from the curler upon which the hair has been wound. Electrical current is then turned on and the solution converted to steam, the temperature of the hair being raised to about 250° F. The heat treatment is continued for from four to seven minutes.

In the Freudenberg et al. patent a method is disclosed wherein strands of hair are wound upon a mandrel or curler, and when thus wound, enclosed in a pad wet with a waving solution: The moistened pad is backed by metal foil to which preheated clamps are applied to impart heat to the pad. The clamp has been heated to such a high degree that when it is applied, the waving solution reaches a steaming temperature in about twenty seconds. The clamp remains in position from one to three minutes. It is then removed and the hair allowed to cool.

Both of the tribunals below rejected claims 3 and 8 as unpatentable over the Slavick patent in view of the Freudenberg et al. reference. With respect to claims 20 to 22 inclusive, the Board stated in its decision that even though a generic method claim, such as claim 2, had been allowed no generic apparatus claim had been allowed, and, therefore, the Board rejected those claims as being drawn to a non-elected species.

It is stated by counsel for appellants in their brief that it is not broadly new to apply heat electrically to the wound strand or hair, nor is it broadly new to subject such strand to steaming during the waving operation.

Claims 3 and 8 depend for novelty and patentability, as stated in the brief of appellants, upon

> electrically supplying a sufficient charge of heat to the assembly within a brief interval of time not exceeding thirty seconds to convert the solution into steam and to complete the waving of the strand.

It may be noted that that quotation is the last step defined in those claims, although set out in somewhat different language in claim 8.

[1] It may be quite true, as contended by appellants, that according to the quoted language the entire charge of heat occupies only a thirty seconds interval, after which no additional heat is supplied to the assembly, and that the waving operation is completed by the initial heat upon the same principle as that which obtains in a "fireless cooker." It may be noted, however, as was pointed out in the decision of the Board, that those claims call merely for electrically supplying heat for an interval not exceeding thirty seconds, but the wording of those claims does not include the step of continuing the waving operation after the heating current has been interrupted.

The position of the Board was that the operation recited in those claims does not require that the heating current be disconnected from the heating element after the initial conversion of the waving solution into steam. We agree with that reasoning because, in our opinion, the wording of claims 3 and 8 does not positively and unequivocally limit the claims to what is the essence of appellants' contribution to the art. That contribution is the concept of disconnecting the supply of current after its brief flow in order to limit discomfort to the customer by reason of being forced to remain "connected up" to a permanent waving machine.

It appears to us that the language of those claims is broad enough to indicate that the electric current is utilized to quickly convert the water into steam and is thereafter used to complete the waving of the hair. When so considered, the claims do not distinguish over the references. The method disclosed in the Freudenberg et al. patent is that a steaming temperature is reached within twenty or thirty seconds after the application of the preheated clamps. In the method of the Slavick patent, the water of the waving solution is converted into steam by means of the resistance heater. Therefore, it would seem that to apply sufficient energy to the resistance element of the Slavick device to produce steam within twenty seconds, as is taught by the Freudenberg et al. patent, would be within the skill of the art and, therefore, non-inventive.

[2] With respect to claims 20 to 22 inclusive, appellants contend that because a generic method claim 2 and a specific method claim 9 have been allowed that the rejection of claims 20 to 22 inclusive is improper. It is argued that because the method of allowed claim 9 is performed by means of apparatus, such as defined in claims 20 to 22 inclusive, that those apparatus claims are directed to the same subject matter of invention as claim 9, and, therefore, should be retained in the same application. We can not agree with such contention. It was said in the decision of the Board that generic and specific method claims were allowed for the reason that they recited that the waving operation is continued after the heat producing energy supply has been interrupted. That interruption is the patentable limitation contained in those claims. The rejected apparatus claims contain no such limitation, and, therefore, it can not be said that they are directed to the same inventive subject matter as allowed method claims 2 and 9. [3] Furthermore, we are in agreement with the argument of the solicitor, that in patent law it is axiomatic if claims are to be considered as being in the same genus and species relationship, they must fall into the same statutory class, and that a genus claim must be for the same combination of elements as the species claims, and define broadly the elements or steps which are variants in the several species. A generic claim should include no material element in addition to those recited in the species claim, and must comprehend the organization covered in each of the species claims. [4] Clearly the apparatus claims of appellants can not be considered to be species of any method claims, because the invention defined by the claims are in different statutory classes. Each method claim herein includes the limitation of "discontinuing" the energy applied to the heating element, and no such limitation appears in the apparatus. Therefore, it is not possible to designate the apparatus claims as species of any allowed method claim.

For the reasons hereinbefore set out, the decision of the Board is Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE HALL

No. 5458. Decided May 4, 1948

[168 F.2d 92; 77 USPQ 618]

1. CLAIMS—HEATING SYSTEM—UNDUE BREADTH.

Where the claim defines a "thermal means responsive to temperature conditions of said heating system for mechanically disconnecting etc." and appellant's application discloses no system to effect such disconnection when the temperature is reduced, but only when the temperature is increased, *Held* broader than the disclosure.

2. SAME—LIMITATION—FUNCTIONAL.

Held that the limitation "a switch that operates in response to small reversals in the direction of the temperature change of the heating means," is only a statement of function.

3. PATENTABILITY — INVENTION — MANUAL CONTROL OF MOTOR SPEED NOT.
It does not involve invention to provide a manual speed control on any motor.

4. SAME—REFERENCES—WHEN NOT AVAILABLE.
Matters known only after the filing date of an application are not available as references against such application.

5. CLAIMS—INTANGIBLE ELEMENT—"SPACE."
Held that the word "space" cannot be considered as anything tangible; it is something without limits or might be aptly described as "nothing."

6. SAME—VAGUE, FUNCTIONAL AND INDEFINITE.
Where the claims positively recite certain elements without showing the manner in which those elements are "interconnected," but describe various functions which might or might not be performed in the operation of the list of elements depending on the manner of their interconnection, *Held* that the claims are vague, functional and indefinite.

7. SAME—AGGREGATION—HEATER STRUCTURE AND THERMOSTATIC SWITCH.
Where the claim recites specifically the heater structure, and a thermostatic switch, the two being capable of completely independent use, *Held* that the claim was properly rejected on the ground of aggregation.

8. PATENTABILITY—CONTROL SYSTEM FOR BURNERS.
Certain claims to a control system for burners *Held* properly rejected for indefiniteness, lack of proper disclosure, functionality, aggregation, and for want of patentability over the prior art.

APPEAL from the Patent Office. Serial No. 347,951.

AFFIRMED.

William D. Hall pro se.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming the final action of the Primary Examiner in rejecting claims 3, 4, 18, 19, 29, 30, 32, 33, and 35 to 40 inclusive of an application for a patent, Serial No. 347,951, filed July 27, 1940, for "Control Systems." One claim was allowed.

The Examiner had before him thirty-eight claims. Appeal was taken from his decision to the Board of Appeals on twenty-six claims. The appeal here involves the above-numbered fourteen claims.

The claims were rejected for reasons of indefiniteness, lack of proper disclosure, functionality, inaccuracy, incompleteness, exhausted combination, aggregation, and for want of patentability over the prior art reading as follows: Scudder, 1,583,238, May 4, 1926; Nelson, 2,172,667, September 12, 1939; Black, 2,207,776, July 16, 1940; Spackman, 2,243,609, May 27, 1941.

For the reason that all of the rejections are before us for review, it is necessary to deal individually with each of the claims and the grounds for their rejection.

Appellant in his brief states that "Appellant has invented a simple and practical control system for burners." He presented to the Patent Office an application, the specification of which fills twenty-three printed pages of the record. The Primary Examiner in a so-called "Brief Statement of Invention" has taken four pages to describe appellant's device. The Board refers to the disclosure as "briefly described" in the Examiner's statement. The brief of appellant appears to agree with the description of his device given by the Primary Examiner. The Solicitor does not attempt to give his own description of the device defined by the rejected claims. The record here is long, the number of claims many, and the brief of appellant voluminous in dealing with a "Simple and Practical Control for Burners."

The primary object of appellant's device is to provide a heater which may be operated in an automobile without being connected to the engine thereof, and, therefore, capable of supplying heat when the automobile engine is not running. The invention is not limited, however, to such use, as appellant states in his specification that it may be used "almost any place that fuel burning heaters are now used."

We will describe appellant's device somewhat more concisely as it appears from the simple diagrammatic drawings of the application. We deem it proper to observe at this point that the allowed claim appears to us to be a simple claim for a simple invention.

Appellant's diagrammatic drawings disclose a fuel tank from which fuel is drawn into a mixer from which it enters a combustion chamber in which there is a ceramic disc designed to maintain ignition once the fuel has been ignited, and also a hot wire igniter for the original ignition of the fuel. From the combustion chamber carrying the heat generated therein is a pipe which is connected to a pipe radiator. At the end of the radiator pipe and extending therein is a blower fan, called by appellant a "pump" which, by reason of its revolving speed, draws the heat through the system and blows it finally from the exhaust end of the radiator pipe. The blower fan or pump together with another fan in axial alignment therewith are operated from a single motor. The second fan blows air over the combustion chamber and radiator. The air, heated by contact with the radiator and combustion chamber, circulates through the area sought to be heated. The pumping fan is driven by the motor through a clutch which includes a bimetallic strip, and the circulatory fan is likewise driven through another clutch which includes a bimetallic strip. A thermostatic strip is shown for further control of the elements hereinbefore described, and the speed of the motor is adjustable by a rheostat.

The patent to Scudder relates to a heating method and device in general relation to a hot air heating installation. As illustrated, a heating system is shown as applied to an oil burning installation in a furnace for heating a dwelling. The patent discloses a furnace plant in which a single motor forces air through a conduit into a combustion chamber and also sucks the air to be heated from another conduit into an enclosed space surrounding the heating radiator. The system contains a switch which thermostatically controls the speed of the motor. It is clear that, depending upon the speed with which the motor is running, the supply of air to the combustion chamber may be varied in proportion to the amount of air blown by the fan over the heating element so that maintaining of the heat means at a relatively predetermined temperature is attained in the system of the patent.

The Nelson reference relates to an air conditioning type of a heating furnace of the forced draft type. It discloses a furnace using oil as a fuel and shows a single motor which drives two fans for circulating air over a combustion chamber, and also a blower fan for "supporting combustion of fuel."

The patent to Black is for an automobile heating device. It discloses a combustion chamber in which there is a refractory member. The fuel supply is gasoline or other hydrocarbon fuel which is brought into the combustion chamber through a conduit. There is shown a fan similar to the pump fan of the involved application, by means of which the flow of fuel from its source into the combustion chamber is effected. The device also includes a second fan designed to propel heated air from over the radiator into the passenger compartment. A single motor is provided for driving both fans. The patent device, however, does not show anything similar to the thermostatic couplers disclosed in the involved application.

The Spackman patent relates to a heater for motor vehicles and particularly to controls for regulating the amount of air heated and circulated by the heating apparatus. The device of the patent contains a thermostatic element which operates in the same manner as the thermostat disclosed in appellant's application. The heater of the patent shows a combustion chamber in which the fuel mixture is lighted by an igniter, and the heat generated in the combustion chamber is brought into the radiator. A motor is shown which is designed to drive a propulsion fan for circulating air over the radiator thus bringing heat into the interior of the passenger compartment. The amount of heat is controlled by a button handle aided by a switch blade including a bimetallic thermostatic element. The switch blade is positioned near the end of the radiator.

[1] Claim 3 reads as follows:

3. In a fluid fuel burning heating system, a combustion chamber, a source of fluid fuel supply, a pump for effecting flow of fuel from said source into said combustion chamber to constitute the main fuel supply for the combustion chamber, heat dissipating means cooperating with said combustion chamber, said heat dissipating means including a circulating fan, a single motor for driving both said pump and said fan, and thermal means responsive to temperature conditions of said heating system for mechanically disconnecting said pump and said motor in response to predetermined changing thermal conditions of the system.

That claim was rejected as being broader than the disclosure of the application. It was held the claim is so broadly drawn that it could cover a system in which the disconnection of the motor from the pump or blowing fan would be effected whenever the temperature is reduced and also when the temperature is increased. The tribunals of the Patent Office stated that appellant's application discloses no system to effect such disconnection when the temperature is reduced and for that reason held that the claim covers more than is disclosed. The Primary Examiner observed it would be obvious that a device in which the pump would be disconnected from the motor when the temperature would fall would lack any utility. Whether or not that observation of the Examiner is correct, we are convinced from a careful examination of the involved application that claim 3 is broader than the disclosure. We agree that it has been properly rejected.

Claim 4 reads as follows:

4. In a fluid fuel burning heating system, a combustion chamber, a pump for effecting flow of fluid fuel into said combustion chamber, heat dissipating means communicating with said combustion chamber, said heat dissipating means including a fan for carrying heat away from the heat dissipating means, a common motor which constitutes the sole means for driving both said pump and said fan, and thermal means responsive to the temperature of said heat dissipating means for controlling the operation of said motor.

It was rejected as being fully met by the Black reference or as substantially met by the Nelson patent. In the devices of each of those patents, a single motor drives the fuel injecting means and the heat distributing means. The Black patent discloses a thermostat responsive to space temperature. That thermostat is a control means such as is defined in claim 4. There can be no doubt but that the thermostat of Black is effected by the temperature produced in the combustion chamber. We think it would be obvious to apply such thermostatic control to the Nelson structure. Appellant in his brief, with respect to claim 4, states that the issue may be reduced to the simple question, "Was it proper to construe the words 'responsive to the temperature of said heat dissipating means' as reading on a room thermostat?" If a room thermostat is not "responsive" to a heat dissipating means, we do not know what use such thermostat would have. Clearly the rejection of claim 4 by the tribunals below was proper.

Claim 18 reads as follows:

18. In a heating system, fuel burning heating means, means to affect the operation of said heating means including a switch that operates in response to small reversals in the direction of the temperature change of the heating means, means operable to vary the fuel flow to said fuel burning heating means, and means for maintaining said heating means at a relatively predetermined temperature in response to wide variations in the feed of fuel thereto.

That claim was rejected as being vague and indefinite for the reason that it does not in any way indicate what the effect of the "said heat means including a switch" may be on the operation of the heat means. The Board held that, insofar as the claim can be considered definite, it "constitutes a mere list of elements without specifying the relations between them whereby they will cooperate to perform any function." The "means for maintaining said heating means at a relatively predetermined temperature in response to wide variations in the feed of fuel thereto." reads on the device of the Scudder patent in the same manner as it reads on the involved application. In the Scudder patent, the fan brings in the air to be heated and also supplies the air for fuel combustion.

[2] With respect to claim 18, appellant argues that the limitation "a switch that operates in response to small reversals in the direction of the temperature change of the heating means," should warrant allowance of that claim. That limitation is

only a statement of function. *In re Hill*, 34 CCPA (Patents) 783, 158 F.2d 1001, 72 USPQ 263, 599 O. G. 7. In our opinion claim 18 is a mere recitation of elements without specifying the relationship between them whereby they will cooperate. *In re Collins*, 22 CCPA (Patents) 1053, 75 F.2d 1000, 25 USPQ 38, 458 O. G. 440.

Claim 19 was rejected as fully met by the Scudder or the Black reference in view of the patent to Spackman. The claim reads as follows:

19. In a heating system, fuel feeding means having means cooperating therewith for burning the fuel and including means operable to greatly reduce the quantity of fuel fed to the fuel burning means, control means operable in response to a large drop in temperature of the system for stopping the feed of fuel thereto, and means for maintaining the system at a relatively predetermined constant temperature when the feed of fuel is intentionally reduced by operation of the first-recited means, whereby the control means does not stop the feed of fuel when the supply of fuel is intentionally reduced.

[3] The control means called for in the claim is a manual motor control as illustrated in one of the figures of appellant's application. The device of the Scudder patent shows such control, and, in our opinion, it does not involve invention to provide a manual speed control on any motor. The Primary Examiner considered that the thermostat switch of the Scudder and the Black patents would respond to small reversals in the direction of the temperature change of the heater means recited in the claim. He stated "In the Scudder device, the heating element will be maintained at a substantially constant level regardless of the absolute heat production. The addition of a thermostatic safety switch to either Scudder or Black which will stop the motor and consequently the fuel feed when there is a large drop in temperature is conventional practice and does not involve invention." Appellant states that if that last quoted sentence is taken at face value, it implies that on the date of the Examiner's statement other persons had already applied such thermostats to the Scudder and Black devices. Appellant says he probably should have challenged such statement as inaccurate and required proof thereof, but did not do so because such statement does not allege such conventional practice prior to appellant's filing date, and that, therefore, the use by the Examiner of the words in the present tense indicates only that such things were conventional on the date when the statement was written. Appellant's position in that respect is not sound. [4] It is true that matters known only after the filing date of an application are not available as references against such application. *In re Lewis*, 25 CCPA (Patents) 1273, 1275, 96 F.2d 1009, 37 USPQ 786, 497 O. G. 18.

The statement concerning "conventional practice" as used by the Examiner in relation in claim 19, in our opinion, intends to relate to what was known in the art at the time of the filing of the application. Surprisingly enough appellant concedes in his brief that thermostatic switches for stopping fuel motors on a large drop of temperature is old. In this connection he stated "Had those switches been used on an ordinary heater whose fuel rate was reduced, such a switch would shut the heater down whenever the fuel rate was intentionally reduced." We can see no error in the rejection of claim 19.

Claim 29 was rejected as inaccurate. It reads as follows:

29. In a heating system, a sealed combustion chamber, a fuel feed line to said combustion chamber, an exhaust line therefrom, movable means including a pump in said exhaust line to create such a high vacuum in said exhaust line as to draw fuel in said fuel feed line and said movable means also including air flow producing means for producing a stream of moving air to carry away the heat generated by combustion of the fuel, said pump and said air flow producing means being mechanically connected together, and means responsive to the temperature of a portion of the system in the vicinity of the said combustion chamber to prevent existence of a flame in said chamber without at the same time stopping said air flow producing means.

It was held below that the application does not disclose "means responsive to the temperature of a portion of the system in the vicinity of the said combustion chamber to prevent existence of a flame in said chamber without at the same time stopping said air flow producing means." Appellant contends that if the heating system overheats, one of his thermoclutches disconnects the fuel pump so that no fuel can flow. That may be true enough, but it is also true, as pointed out by the Board in its decision, that any fuel which may remain in the combustion chamber can burn, and there is no positive means disclosed which would prevent the existence of a flame in the chamber. Of course when the fuel supply is stopped, the flame will sooner or later become extinguished, but such extinguishment is not a prevention of the existence of such flame. It appears to us that the claim is not supported by the disclosure of appellant's application.

Claim 30 was rejected as unpatentable over the Black reference in view of the Spackman patent. The claim reads as follows:

30. In a space heater; a vacuum system comprising a sealed combustion chamber, a fuel feed line to said combustion chamber, and an exhaust line therefrom including a radiator communicating with said combustion chamber and heated by the exhaust gases therefrom; an electrically operated igniter for igniting the feed of fuel passing to said chamber; thermostatic means affected by a rise in temperature of the vacuum system for deenergizing said igniter; movable means for setting such a high vacuum in said exhaust line as to draw fuel to said combustion chamber through said fuel feed line; means mechanically connected to and driven mechanically by said movable means for blowing air over said radiator and therefrom to the space to be heated; and means comprising a thermostatic element near the vacuum system and in the path of said air for preventing existence of proper vacuum conditions to support combustion in response to an excess temperature of said element.

Claim 30 was rejected on the Black patent in view of the patent to Spackman, the Board stating that the claim is directly readable on the Black patent except for "means comprising a thermostatic element" which appears in the last clause of the claim. That means, as was pointed out below, merely defines a thermostatic control for the motor, and since the device of the Spackman patent discloses a thermostat, no invention would be involved in providing one to control the motor. A thermostat is disclosed in the Spackman patent near the heater which corresponds to the "vacuum system" of the claim. It is true, as pointed out by appellant, that the Board of Appeals in its decision stated that the Black patent does not disclose anything like appellant's thermostatic coupler, and the Board did not hold that the thermostat in the Spackman system controls a fuel motor. The system in the Black patent contains a thermostat which responds to rise in temperature above a predetermined maximum which will open the main circuit to the motor which drives both fans of the Black device. It was held by the Examiner that it was not inventive to place the switch means of the Black system in the position of the switching means of the Spackman patent, namely "in the path of the said air" as called for in the claim. It is clear to us that claim 30 was properly rejected.

Claim 32 reads as follows:

32. In a heating system; a combustion chamber; a fuel feed line thereto and a radiator cooperating therewith; an electrical resistance igniter for initiating combustion of fuel at said combustion chamber; means for effecting feed of fuel through said fuel feed line and for blowing air to be heated over said radiator, comprising a common single driving means, an electrical circuit which when deenergized stops said driving means; and thermostatic switching means, responsive to the temperature of the radiator, for controlling the energization of said igniter and of said circuit according to combustion conditions.

That claim was rejected on the prior art in the same relationship as claim 30. Appellant contends that the final clause in claim 32 provides for a switching means designed to control the igniter in his combustion chamber and his motor. He urges that such means and such relationship is not disclosed in either the Black or Spackman system. An examination of the Spackman patent convinces us that his thermostatic switch controls both his igniter and his motor by means of which his fan is driven. It would not require invention to apply the same dual control in a system such as is shown in the Black patent, where the motor also drives a fuel pump. We are in accord with the reasoning of the tribunals of the Patent Office in their rejection of that claim.

Claim 33 reads as follows:

33. In a heating system, a space where fuel is burned, a fuel feed line to said space, movable means including a pump to effect feed of fuel through said fuel feed line to said space and also including air flow producing means mechanically connected to said pump for producing a stream of air which carries away the heat generated in said space, and means responsive to the temperature of the stream of air immediate of the heating space for stopping combustion in said space by reducing the feed of fuel thereto without reducing the speed of the air flow, in response to predetermined changing thermal conditions.

[5] That claim was held to be unpatentable because of the inclusion of the word "space" as a positive element. The Board stated that it recommended, under the provisions of rule 139 of the Rules of Practice, U. S. Patent Office, that the word "space" wherever it occurs in claim 33 be changed to the word "chamber" in order to avoid the inclusion of the word "space" which the Board stated to be an intangible element. The Board agreed that, if such changes were promptly made, the claim would be allowed. The Examiner rejected that claim on the prior art, but the Board did not affirm that ground of rejection. Appellant contends that the fuel burning chamber is not a major element in claim 33, referring to his specification wherein it is stated that appellant's system is not limited to use in automobiles, but may be used in almost any place where fuel burning heaters are used. Appellant mentioned that gas fireplaces and other heaters do not have a "chamber." The word "space" in our opinion can not be considered as anything tangible. It is something without limits, or might be aptly described as "nothing." It is incomprehensible to us why appellant should object to the substitution of the word "chamber" for his word "space." He surely could not operate his system with the horizon of the earth and the arc of the sky as his boundaries, and how in the world he could carry away heat generated in "space" is beyond comprehension.

Claim 35 reads as follows:

35. In a heating system, a combustion chamber having a fuel feed input and an exhaust output, a radiator having an input fed by said exhaust output and having an exhaust end, a thermostat situated near and responsive to the temperature of the exhaust end of said radiator, a circulating fan for passing a stream of air across said radiator whereby the amount of heat carried away from said radiator depends on the speed of said fan, a pump which effectuates feed of fuel through said combustion chamber depending on the speed of said pump, and a common motor driving said fan and pump, and means for varying the speed of said motor; said fan, radiator and thermostat being so constructed and arranged that operation of the motor at different speeds will effect such flow of air across said radiator as to effectuate a heat dissipation effect proportional to the change in fuel rate of said pump and thereby prevent wide variations in the temperature of said thermostat when the speed of the pump is varied.

The claim was rejected below as unpatentable over the Black reference in view of the patents of Spackman and Scudder. The rejection of the claim by the Examiner as incomplete and functional was not sustained by the Board which ruled that the claim does not differentiate from the prior art merely by reason of the functional language contained therein. The expression "which effectuates feed of fuel through said combustion chamber depending on the speed of said pump," and "said fan, radiator and thermostat being so constructed and arranged that operation of the motor at different speeds will effect such flow of air across said radiator as to effectuate a heat dissipation effect proportional to the change in fuel rate of said pump and thereby prevent wide variations in the temperature of said thermostat when the speed of the pump is varied." are the portions of the claim properly held by the tribunals below to be in functional language. In our opinion, the ruling of the Board is correct. It is contended by appellant that claim 35 calls for a preferred location of the thermostat adjacent to the radiator. He states in his brief that the Black system does not show "a thermostat situated near and responsive to the temperature of the exhaust end of said radiator;" that it does not show "means for varying the speed of said pump." and that it lacks a showing of the entire last clause in the claim following the semicolon. The system in the Spackman patent shows a thermostat switch means adjacent to the radiator. A means for varying the speed of the pump is disclosed in the Scudder device which shows a rheostat for varying the speed of the driving motor of the device. Claim 35, as far as its structural elements are concerned, is clearly unpatentable over the prior art as held below, and can not be differentiated from said art by reason of the functional language herein set out.

Claim 36 provides for the device of claim 35 including in addition "electrically operated igniter controlled by said thermostat," and claim 37 defines the device of claim 35 with the addition of the limitation "in which said thermostat controls said motor."

Those claims were rejected for the same reasons given for the rejection of claim 35, and we think properly so.

[6] The Board of Appeals agreed with the decision of the Primary Examiner rejecting claims 38 and 39 as unpatentable by reason of being vague, functional, and indefinite. They read as follows:

38. The combination with a heater that derives its heat from combustible fuel, of a pump for effectuating fuel flow to said heater, a circulating fan for passing a flow of air across a portion of said heater, means interconnecting the pump and fan to effect proportional speeds thereof and thereby effectuate a cooling effect across said portion of said heater which is proportional to the heat generated by the heater and thereby prevent wide variations in temperature of said portion of said heater upon change in speed of said pump, means whereby the speed of said pump may be widely varied, electrical means operable to start and stop the pump, and a thermostat affected by the temperature of said portion for controlling said electrical means.

39. The combination with a heater that derives its heat from combustible fuel, of a pump for effectuating fuel flow to said heater, a circulating fan for passing a flow of air across a portion of said heater, means interconnecting the pump and fan to effect proportional speeds thereof and thereby effectuate a cooling across said portion of said heater which is proportional to the heat generated by the heater and thereby prevent wide variations in temperature of said portion of said heater upon change in speed of said pump; the last-recited means comprising a motor for driving both said pump and fan and including speed changing means for varying the speed of said motor, electrical means operable to ignite the combustible fuel at said heater, and a thermostat affected by the temperature of said portion for controlling said electrical means.

A mere reading of those claims, whose positive elements, as recited therein, comprise a pump, a heater, a fan, means interconnecting the pump and fan which includes a motor, speed change means, electrical igniter means, and a thermostat for controlling the electrical ignition means, without showing the manner in which those elements are interconnected, but describing various functions which might or might not be performed in the operation of the list of elements depending on the manner of their interconnection, makes it clear to us that claims 38 and 39 are vague, functional, and indefinite.

[7] Claim 40 was rejected as being drawn to an aggregation. The claim reads as follows:

40. In a heater with combustion control, the combination with a combustion space; a radiator which communicates with the combustion space to receive the exhaust gasses therefrom; a place to be heated; a circulating fan for transferring the heat from said radiator to the place to be heated; a pump for effecting supply of fuel to said combustion space; a common motor, electrically driven, for propelling both said pump and said fan; means connected to said motor, pump, and fan to couple the three together and effectuate operation of all three at proportional speeds; and electric motor circuit for supplying current to the motor; and a thermostatic switch associated thermally with said radiator and depending for its operation upon the temperature in the close vicinity of the radiator, said switch comprising a thermostatic element, a sliding operating member which is moved in a first direction by the thermostatic element when the latter is rising in temperature and is moved in the other direction when the latter is falling in temperature, and means including contacts in series with said circuit for maintaining such contacts and the circuit closed as long as the thermostatic element is applying force on said operating member in the first direction and maintains the circuit broken when the thermostatic element is applying force on said sliding member in the other direction.

The Primary Examiner held that claim 40 should be rejected on the ground of aggregation for the reason that it covers the aggregation of a heater structure and a thermostatic switch of general application. The Examiner stated "Inasmuch as it is the heater structure which has been elected for prosecution in this application it is considered that the thermostatic switch structure should be eliminated from the claim. It appears to be obvious that the two instrumentalities are capable of completely independent use and furthermore that they are separately classified and searched." The Board agreed with the reasoning of the Examiner.

From a careful examination of claim 40, it seems obvious to us that the claim was properly rejected on the ground of aggregation for the reason advanced by the Primary Examiner and affirmed by the Board.

[8] We have carefully considered the contentions of appellant with respect to all the involved claims and find them to be without merit.

Therefore, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE HOCK

No. 5461. Decided June 1, 1948

[168 F.2d 540; 78 USPQ 75]

1. PATENTABILITY—INVENTION—CHANGE IN SHAPE.
   Where the only difference between the structure defined by an appealed claim and the reference is the specific shape of certain elements, and where the structures of other patents show that it is old to employ elements of the specific shape defined in the claim, *Held* that there would be no invention in view of those patents to employ these specific shaped elements in the device of the primary reference.
2. SAME—SAME—EVIDENCE OF—COMMERCIAL SUCCESS—CONSIDERED ONLY IN DOUBTFUL CASES.
   Where the record contains affidavits tending to prove commercial success of appellant's structure, and where it may be conceded that commercial success has been established, *Held*, nevertheless, that such success may only be properly considered in doubtful cases, and because it is clear to us that appellant's device is unpatentable over the prior art, there is no room for doubt.
3. SAME—SAME—CIRCULATOR.
   Certain claims for the combination of a container adapted to contain a liquid to be heated and a liquid circulator within the container *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 444,153.

AFFIRMED.

Joseph A. Rave (*J. Harold Kilcoyne* of counsel) for Hock.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner finally rejecting all of the claims, 19 to 30 inclusive, of appellant's application, Serial No. 444,153, for a patent "For Circulator." Claims 19 to 23 inclusive and claim 30 were rejected as unpatentable over the prior art. Claims 24 to 29 inclusive were rejected as being drawn to a non-elected species, and, therefore, need not be considered in this court upon their merits. Should we find a generic claim allowable, the rejection as to claims 24 to 29 inclusive should be reversed. If the court should find no generic claim allowable, the decision appealed from should be affirmed because it is not contended that claims 24 to 29 inclusive are not drawn to non-elected species.

While seven references are cited in the decisions below, in view of our conclusion it is necessary only to refer to the following of such references: Roos, 248,796, October 25, 1881; Hoernel et al., 1,852,777, April 5, 1932; German patent, 617,641, August 22, 1935; Tay, 2,166,067, July 11, 1939; Smith, 2,183,509, December 12, 1939.

Claim 19 is generic and illustrative of the subject matter of the involved claims and reads as follows:

19. In a device of the class described the combination with a container adapted to contain a liquid to be heated and means associated with said container for heating the liquid, of a liquid circulator within the container for further supplying heat to said liquid and causing a rapid circulation of the liquid within the container and comprising an inner cylinder with a central passage and a length somewhat in excess of the transverse dimension of the central passage, an outer cylinder spaced from the inner cylinder having a length substantially equal to that of the inner cylinder and with the ends of said cylinders connected to one another to form a chamber around the passage way of the inner cylinder, a steam distributor in said chamber at the upper end for simultaneously supplying the steam to the entire upper end of the chamber, a steam supply pipe connected to said distributor, and a discharge pipe at the lower end of said chamber for drawing off products of condensation in said chamber.

The alleged invention relates broadly to a kettle, having at the bottom thereof a steam jacket and an interior drum comprising two nested cylinders forming an annulus between the walls thereof, which are connected at their tops and bottoms. The drum is designed as a steam heating cylinder. The contents of the kettle are heated and circulated by means of the steam jacket and the steam heating circulator within the kettle. At the top of the annular chamber between the nested cylinders is a perforated ring through which steam is supplied to the annulus, and at the bottom of the chamber is a pipe through which the condensed steam is withdrawn. The liquid in the kettle and within the chamber is heated by the steam within the annulus, and by reason of such heating, the liquid rises from the bottom and through the top of the interior space of the cylinder. That rising of the liquid causes a circulation of the contents of the kettle, drawing it in at the bottom of the cylinder which is spaced from the bottom of the kettle. The use of the device is stated to result in an improved circulation of the liquid in the kettle.

The Roos patent relates to an apparatus for cooling or heating liquids. It discloses a large liquid container within which is a cylindrical heating member. An annular chamber is formed between the interior and outer cylinders comprising the heating member, which is positioned above the bottom of the container. A heating fluid is supplied to the interior of the annular chamber.

The Hoernel et al. patent relates to cooling systems and an object of the invention is said to be the removal of entrapped air, gas, or vapor from a cooling system. The device of the patent discloses a vent pipe extending from the upper portion of a heat exchange unit and connected with the liquid discharge pipe from the bottom of said unit.

The German patent relates to a high capacity supplementary boiler. There is disclosed a hollow spherically shaped container or kettle which is steam jacketed at the bottom thereof, and an interior hollow annular member of relatively spherical shape. Steam is supplied to the annulus of the interior member through a perforated pipe in the upper part thereof.

The Tay patent relates to a juice heating unit. That patent as well as the Roos patent discloses a cylindrical heating member comprising throughout the length thereof an annular chamber. The heating member is located within a larger liquid heating receptacle and is spaced above the bottom of the receptacle. The heating fluid is supplied to the interior of the annular chamber.

The Smith patent relates to a water cooler. That patent, like the patent to Hoernel et al. discloses a vent pipe from the upper portion of a heat exchange unit to the liquid discharge pipe at the bottom of the unit.

Heat exchanging kettles with steam jackets are old in the art, and it is admitted in appellant's specification that it is not new to use auxiliary means within the kettle to increase the circulation and heating of the contents thereof.

The illustrative claim recites a liquid container and means for heating the liquid therein. A similar container and interior heating means is shown in the device of the German patent except that the central passage in the German means is not cylindrical throughout. It flares slightly outwardly at the top or the bottom or at both ends of the cylinder. The ends of the interior and outer walls of the interior heater of the German patent are joined to form an annular chamber around the central passage. A steam distributor is located at the upper end of the annular chamber for the purpose of supplying steam therein, and a discharge pipe is located at the bottom of the chamber through which condensed steam may be drawn off.

[1] The only difference between the structure defined by claim 19 and the structure of the German reference is the specific shape of appellant's interior circulating member and the passageway therethrough. The structures of the Roos and Tay patents show that it is old to employ an interior cylindrical circulator with a cylindrical passage therethrough. Clearly there would be no invention in view of those patents to employ the cylindrical chambers and passages thereof in the German device. If, as urged by appellant, the shape of the cylindrical pipe of his interior heater possesses greater advantages, we are of opinion that such advantages are inherent in the structure disclosed in the Roos and Tay patents, and certainly would be obtained in the German structure if the circulator were made cylindrical throughout as shown by the structures in the Roos and Tay patents. Moreover, there is nothing in the record to disclose any comparison between tests of appellant's structure and of the German structure. Therefore, it can not be said that appellant's structure possesses any unexpected superiority

by reason of its shape over the spherical interior heater of the German patent.

[2] There are affidavits in the record tending to prove commercial success of appellant's structure. Conceding everything that is stated in those affidavits to be true, and that commercial success has been established, nevertheless, such success may only be properly considered in doubtful cases, and because it is clear to us that appellant's device is unpatentable over the prior art, there is no room for doubt. That principle has been constantly and consistently adhered to by this court since it first took over its patent jurisdiction, and has been so often reiterated that it is unnecessary to recite any authorities in support thereof.

Claim 20 recites as an additional element to claim 19 a vent pipe which extends from the top of the chamber to the discharge pipe at the bottom thereof for drawing off air from the top of the chamber. Such vent pipe is old as disclosed in the Smith patent and in the Hoernel et al. patent. Clearly no new or unexpected result would follow if a vent pipe were added to the device of the German patent.

While claim 21 states that the circulator is supported by legs and the structure of the German patent shows it to be suspended from the top of the vessel, the matter of support is merely an obvious mechanical expedient. Moreover, the structure of the Roos patent discloses legs for supporting the circulator. It is also recited in claim 21 that the steam supply pipe enters the circulator at the top thereof. We agree with the Board that it is not a matter of patentable distinction as to where such steam pipe enters the structure.

We do not deem it necessary to discuss claims 22, 23, and 30 for the reason that they are generally similar to the claims we have already analyzed.

We are convinced that the rejection of the claims by the tribunals below was without error, and, therefore, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

MANTZ *v.* KRONMILLER

No. 5466. Decided May 4, 1948

[168 F.2d 100; 77 USPQ 628]

1. INTERFERENCE—CLAIM COPIED FROM PATENT—RIGHT TO MAKE—COUNT UNAMBIGUOUS.

When it is conceded by the parties that the count is not ambiguous, *Held* that it must be given the broadest interpretation which it will reasonably support.

2. SAME—SAME—SAME—"LATCH MEANS."

Held that "latch means" is broader in scope than the word "latch," and that appellee's application clearly discloses "latch means" such as conforms to the limitation of the count.

3. SAME—PRIORITY—SAFETY VALVE FOR GAS BURNERS.

Held that appellee's disclosure clearly supports the count in issue, and that the decision of the Board of Interference Examiners awarding priority to appellee is affirmed.

APPEAL from the Patent Office. Interference No. 81,590.

AFFIRMED.

Brown, Jackson, Boettcher & Dienner (*Charles V. Hildebrecht* of counsel) for Mantz.

George H. Fisher (*Frederick E. Lange* of counsel) for Kronmiller.

JACKSON, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Interference Examiners of the United States Patent Office awarding priority of the subject matter of the single count to appellee.

The interference involves a patent to appellant, No. 2,321,095, dated June 8, 1943, on an application filed July 24, 1939 and an application of appellee, Serial No. 87,706, dated June 27, 1936. Therefore, appellee is the senior party.

The involved count is a claim copied by appellee from the patent to appellant after it had been issued and reads as follows:

1. In a device of the character described, in combination, a controlling member having an operative position and a safety position, latch means for holding said controlling member in operative position, an electromagnet, an armature for said electromagnet which, by movement to retracted position, releases said latch means for movement of said controlling member to safety position, and reset means for actuating said armature to attracted position and in the actuation of the armature to attracted position being operable to move said latch means to position to pick up said controlling member for actuation thereof to operative position.

Appellant moved to dissolve the interference on the ground that appellee could not make the count. The Primary Examiner, after hearing, denied the motion. The Board of Interference Examiners on final hearing reviewed the question of appellee's right to make the count and agreed with the holding of the Primary Examiner, and accordingly awarded priority of invention of the subject matter of the count to appellee.

The sole question before us is whether or not appellee has the right to make the count.

The subject matter out of which the interference arises relates to a safety valve for gas burners. The valve through which the gas is fed on its way to the burner closes when the pilot light is extinguished. Specifically, the invention in issue relates to a thermocouple shut-off device which operates through a comparatively slight electromotive force produced by the thermocouple which is exposed to the heat of a pilot flame. While the pilot flame is burning, the flow of fuel to the main burner continues. When the pilot flame is extinguished, an electromagnet, which was energized by the thermocouple, becomes deenergized, and the shut-off device cuts off the flow of fuel to the burner by being moved into a closed or safety position.

Apparatus of the type here involved are old in the art and the issue here is only concerned with an arrangement of elements comprising latching means designed to maintain a controlled member of the safety shut-off device in an open or closed position.

In order that the device of appellee may be more readily understood, we reproduce Fig. 9 of his application which represents the valve in an open position.

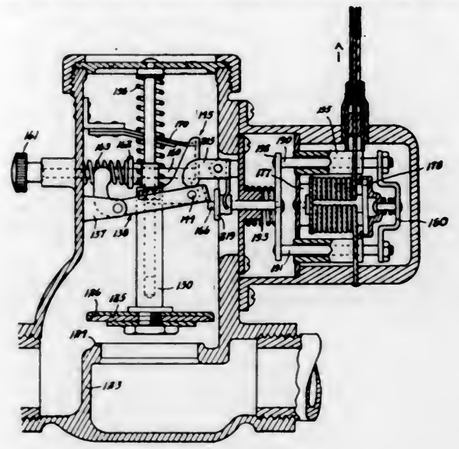

Fig. 9.

Referring to the drawing, the numeral 125 represents the valve disc, which is the controlling member. It will be observed that gas coming through the section of pipe (unnumbered) at the lower left side of the figure passes downwardly through the aperture between the valve disc and the valve seat 124 and thence through the pipe (unnumbered) shown at the lower right part of the drawing to the main burner (not shown). The valve disc 125 is secured to the valve stem 130. The valve stem is spring biased to closed position by the spring member 156. Member 177 is one of the two cores of an electromagnet. The cores are electrically connected to the thermocouple, which it is unnecessary to show in the drawing, but which in appellant's apparatus would appear above the upper right of the drawing along the line indicated by the arrow. Cooperating with the electromagnet is armature 178 carried by yoke member 180. The yoke member is connected to the slidable pin 166, which extends into the valve casing. The function of spring 193 is to bias the armature away from the electromagnet and to draw pin 166 outwardly from the casing. The valve in its open position, as shown in the drawing, is so maintained by the arrangement of a bell crank lever 145 pivotally connected to valve stem 130 and also to the bell crank lever 138, at 144, which it will be observed cooperates with the pin 166. The pin 166 stays in the position shown in Fig. 9 as projecting under the outer right end of lever 138 as long as the electromagnet is energized. The spring 163 serves to bias the lever 145 on its pivotal connection with lever 138 holding valve disc 125 in open position as long as the levers 138, 145, and pin 166 are engaged. When the pin 166 is drawn to the right by reason of deenergizing the electromagnet, the spring 156 pushes the valve disc 125 down to closed position. Knob 161 is the resetting member. That knob and stem 160 cooperate with the upwardly extending arm of the bell crank lever 145. When the thermocouple becomes deenergized by reason of extinguishment of the pilot light, the valve immediately assumes a closed position. It will be seen that to bring about such closed position, the spring 193 is effective to draw the pin 166 from under the bell crank lever 138, and due to the expansion of spring 156, the bell crank levers fall into a downward position together with the stem and the control member. When the spring 193 pulls the stem 166 from the open position, it also pushes the armature 178 away from the posts of the electromagnet. In order to reset the device, the knob 161 is pulled outwardly. This causes the collar 162, by engagement with the upright arm on the left of bell crank lever 138, to swing that lever in counterclockwise movement from the above mentioned downward position. After the right end of bell crank lever 138 passes in counter clockwise movement above the position of pin 166, the lever 138 engages the inwardly extending curved arm of the small bell crank lever 215, causing the downwardly extending narrow arm of lever 215 to engage the collar 219 moving the pin 166 into holding position, shown in Fig. 9 beneath the right end of lever 138, and the armature 178 is pulled into attracted position.

When the pilot burner has again been lighted and has heated the thermocouple so as to energize the electromagnet strongly enough to hold the armature 178 in attracted position, the reset knob is released and the pin 166 will continue to support the lever 138, as shown in Fig. 9 and the spring 163 will hold the stem 160 inwardly. In its inward resetting movement, the stem 160 engages and swings the bell crank lever 145 in clockwise movement about the pivot 144 on the lever 138 and such movement of the lever 145 opens the valve disc member 125.

[1] It is conceded by the parties that the count is not ambiguous. Therefore, it must be given the broadest interpretation which it will reasonably support. *Bechtold* v. *Lanser*, 23 CCPA (Patents) 1051, 82 F.2d 415, 29 USPQ 130, 470 O. G. 723; and *Henry P. Field* v. *Audley Hart Stow*, 18 CCPA (Patents) 1437, 49 F.2d 840, 9 USPQ 347, 412 O. G. 557.

Appellant contends that the structure of appellee does not meet the limitation of the count for "latch means for holding said controlling member in operative position" and the further limitation for the "reset means for actuating said armature to attracted position and in the actuating of the armature to attracted position being operable to move said latch means to position to pick up said controlling member for actuation thereof to operative position."

Appellant contends that the tribunals below erred in considering lever 138, lever 145, and pin 166 of appellee's structure as the "latch means for holding said holding member in operative position." Appellant argues that even if the lever 138 of appellee's device is considered as part of the latch means, the bell crank lever 145 is not a latch means nor a part thereof. It is urged in appellant's brief that lever 138 is not latching means nor in anywise a part of

the latching means, for the alleged reason that it simply operates to open the valve disc 125 and to retain it in open position under the thrust of the spring 163 which opens and holds the valve disc 125 in open position when the bell crank lever 138 is held in appropriate position by pin 166.

Appellant seems to rely upon the definition of the word "latch" and quotes from Webster's New International Dictionary as follows:

> A movable piece which holds anything in place by entering a notch or cavity; specif., the catch which holds a door or gate when closed, though it be not bolted. To catch or fasten by means of a latch.

Appellant also quotes from Funk and Wagnall's College Standard Dictionary the definition of the word "latch" as "A catch for fastening a door, lid, shutter, etc., commonly not requiring a key."

[2] Seemingly, in connection with his contention concerning the latch means as set forth in the count, appellant relied before the Board of Interference Examiners on such dictionary definition, because in its decision the Board mentioned that according to the dictionary definition of the word "latch" it is not necessarily a single element but may be a combination of elements which include operating members. The Board further stated that the addition of the word "means" to the word "latch" has a broadening effect. Pointing out that because the valve in appellee's device can not be held in open position by latch pin 166, except through the cooperative instrumentality of the bell crank levers 138 and 145, the Board was of the opinion that the decision of the Primary Examiner, with respect to elements 166, 138, and 145, was proper.

There can be no question but that when the controlling member 125 is in the open or operative position that it is so held by latch means. This, in our opinion, is made clear from an examination of Fig. 9, which shows bell crank lever 138 resting on the retractable pin 166. However, without the cooperation of the lever 138, lever 145, and pin 166, it is obvious that there can be no latching.

We agree with the reasoning of the Board of Interference Examiners that "latch means" is broader in scope than the word "latch" and that appellee has clearly shown, for the reason herein given, that his structure possesses in elements 138, 145, and 166, in their cooperating action, "latch means" such as conforms to the limitation of the count which calls for "latch means for holding said controlling member in operative position."

There can be no question but that the reset knob 161, when pulled to the left brings the armature 178 into attracted position. When the knob 161 is pulled outwardly, the collar 162 rocks the left elevated arm of crank lever 138 in counterclockwise movement. Then lever 138 and lever 145 are moved to a juxtaposition and the downward movement of the lever 138 is prevented by the pin 166. In that movement, lever 145 elevates valve stem 130 so as to actuate the valve to open or "operative" position.

It is contended by appellant that, even though the lever 145 should be considered as part of the latch means, the count can not apply to the structure of appellee for the reason that that lever is alleged to be unmoved by actuation of the armature "to attracted position" by the reset member "to position to pick up said controlling member for actuation thereof to operative position," as called for in the count. He makes that contention for the reason that lever 145 is pivotally connected with the valve stem and thus he alleges there can be no picking up of that stem by the lever 145. With respect to that contention, the Board held, and properly so in our opinion, that the language in the count does not require that the latch means, in order to pick up the control member, must be out of contact with the stem, and, therefore, in that respect, the disclosure of appellee supports the count.

[3] We are in thorough agreement with the reasoning of the Board, as we have above set out, in its holding that appellee's application clearly discloses "latch means for holding said controlling member in operative position." The count does not require that the latch means be out of contact with the stem, and, therefore, we hold that the involved application definitely shows "reset means for actuating said armature to attracted position and in the actuation of the armature to attracted position being operable to move said latch means to position to pick up said controlling member for actuation thereof to operative position" as called for in the count.

The decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE FREEDLANDER ET AL.

No. 5163. Decided June 1, 1948

[168 F.2d 535; 78 USPQ 77]

1. PATENTABILITY—METHOD—SPECIFIC MATERIAL USED NOT A STEP IN THE METHOD.
   Where the reference clearly discloses each of the manipulative steps set forth in the appealed claims, but it is urged that the patentable distinction resides in the fact that the reference does not disclose the specific material used by appellants in one of the steps of the method, *Held* that the specific material used does not constitute a new step in the method.
2. SAME—OLD METHOD—NOT RE-PATENTABLE BECAUSE APPLIED TO A NEW AND ANALOGOUS MATERIAL.
   An old method cannot be rendered patentable by applying it to a new and analogous material.
3. PRACTICE—STATEMENT OF FACT—ACCEPTED AS CORRECT IF UNCHALLENGED.
   Where the Board of Appeals stated that "fiber reinforcements in extruded or molded rubber materials are well known," and appellants did not question that statement nor call for an affidavit supporting it, *Held* that it must be accepted as correct.
4. PATENTABILITY — DRAFT APRON — ADVANTAGES IN CLAIMED ARRANGEMENT—MECHANICAL SKILL.
   Where appellants contend that there are special advantages involved in arranging fibers transversely of the longitudinal axis of the draft apron, *Held* that the claimed arrangement involves nothing more than the exercise of ordinary mechanical skill.
5. SAME—SAME.
   Certain claims to a method of making a draft apron involving the use of a layer of rubber-like material reinforced with fine textile fibers parallel to each other and transverse of the longitudinal axis *Held* properly rejected on the prior art.

APPEAL from the Patent Office. Serial No. 507,080.

AFFIRMED.

Toulmin & Toulmin (*H. A. Toulmin, Jr.*, *Herbert H. Brown*, and *John M. Mason* of counsel) for Freedlander et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 3, 6, and 8 to 11, inclusive, in appellants' application for a patent for a method of making a draft apron for textile machinery, on the ground of lack of invention over the prior art.

Counsel for appellants moved to dismiss claims 8 and 10. The motion will be granted.

Claims 3 and 11 are sufficiently representative of the claims before us on appeal. They read:

> 3. The method of making a draft apron for textile machinery which comprises depositing a layer of rubberlike material reinforced with fine textile fibers laid parallel to each other and transverse of the longitudinal axis on a cylinder or mandrel, placing thereover a layer of substantially inextensible cord, covering and impregnating the cord with a layer of rubberlike material, vulcanizing the built-up body, and grinding or abrading the surface to produce a proper working surface.
>
> 11. The method of making a draft apron for textile machinery which comprises placing a layer of rubberlike material reinforced with fine textile fibers laid parallel to each other and transverse of the longitudinal axis on a cylinder or mandrel, placing thereover a layer of substantially inextensible cord, superposing thereon a layer of textile free rubberlike material of substantially the same thickness as the first mentioned layer of textile reinforced rubberlike material, vulcanizing the built-up body, and grinding or abrading the surface to produce a proper working surface, whereby there is produced an apron in which the cord layer is equidistantly spaced from either surface thereof and in which one surface consists of rubberlike material reinforced with fine textile fiber and the second consists of textile free rubberlike material.

The references relied on are: Cragne et al., 77,173, April 28, 1868; Hosli (British), 8,413, November 23, 1905; Lowry (British), 443,642, March 2, 1936; Bemis, 2,157,093, May 9, 1939; Bacon, 2,315,763, April 6, 1943; Billmeyer, 2,377,316, June 5, 1945.

Appellants' application relates to the making of draft aprons. The aprons are endless belts which are used in drawing out textile fibers preliminary to spinning operations. In appellants' process a tube of rubber-like material, reinforced with textile fibers extending transversely to the longitudinal axis of the apron is deposited on a mandrel and a layer of cord is placed over it. The cord layer is then covered and impregnated with rubber-like material and the assembly is vulcanized and ground or abraded to provide a proper "working surface."

The Board of Appeals held that the Hosli and Cragne et al. references did not appear to be pertinent and that the patents to Bemis and Lowry were merely cumulative to the disclosure in the patent to Billmeyer. Accordingly, the only patents which need be considered here are those to Billmeyer and Bacon.

The patent to Billmeyer discloses a method of making a draft apron in which a layer of synthetic rubber is placed on a mandrel and a layer of cord is wound over it. A second coating of synthetic rubber is then applied over the cord, additional fabric and facing layers are applied and the assembly is vulcanized and its surface is ground or buffed.

The patent to Bacon discloses a method of making lug straps, in which rubberized fabric is applied to a drum, a layer of cord is wound over it, more rubberized fabric is applied over the cord, and the assembly is molded and vulcanized.

Both the Examiner and the Board held all the appealed claims unpatentable over the disclosure in the patent to Billmeyer although they applied the reference somewhat differently. The Board, as pointed out by counsel for appellants, apparently misconstrued certain claims in holding that the longitudinal axis referred to is that of the mandrel rather than that of the apron.

[1] The patent to Billmeyer clearly discloses each of the manipulative steps as set forth in the appealed claims. In seeking to distinguish the appealed claims over the reference, counsel for appellants rely on the statement in each of those claims that the inner layer includes reinforcing fibers laid parallel to each other and transverse to the longitudinal axis of the apron.

[2] The patent to Billmeyer does not disclose reinforcing fibers in the inner layer. However, the specific material used for the inner layer does not constitute a new step in the method. The novelty, if any, in this feature resides in the article and not in the method. An old method cannot be rendered patentable by applying it to a new and analogous material. See *In re Saunders et al.*, 33 CCPA (Patents) 1001, 154 F.2d 693, 69 USPQ 341, 590 O. G. 11, and cases therein cited.

[3] It was stated by the Board of Appeals that "Fiber reinforcements in extruded or molded rubber materials are well known." Appellants did not question that statement nor call for an affidavit supporting it, and it must, therefore, be accepted as correct. See *In re Pirani and Nitschke*, 22 CCPA (Patents) 1002, 75 F.2d 223, 24 USPQ 411, 457 O. G. 246; *In re Eliot*, 22 CCPA (Patents) 1088, 76 F.2d 309, 25 USPQ 111, 459 O. G. 3; and *In re Lewis*, 25 CCPA (Patents) 1273, 96 F.2d 1009, 37 USPQ 786, 497 O. G. 18. Accordingly, the broad idea of using fiber reinforcements in the inner rubber-like layer of the structure disclosed in the patent to Billmeyer would not involve invention.

[4] Counsel for appellants contend that there are special advantages involved in arranging the fibers transversely to the longitudinal axis of the apron. The arguments advanced in support of this contention have been carefully considered, but we are of opinion that the claimed arrangement involves nothing more than the exercise of ordinary mechanical skill.

[5] We are of opinion that claims 3, 6, 9, and 11 were properly rejected on the patent to Billmeyer. It is unnecessary, therefore, that we con-

sider the rejection of the appealed claims on the disclosure in the patent to Bacon.

The appeal is dismissed as to claims 8 and 10.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE WALTERS

No. 5440. Decided May 4, 1948

[168 F.2d 79; 77 USPQ 609]

1. INVENTION—SUBSTITUTION OF MATERIALS—COATING AND WRAPPING MATERIALS.
   It is the general rule that, in the absence of any unexpected result, the substitution of one material for another is not a matter of invention. The rule has been specifically applied to coating and wrapping materials.
2. SAME—STATEMENT OF COUNSEL NOT EVIDENCE.
   Where statements of counsel in the brief are that results of using appellant's specific material are revolutionary and marked the greatest advance in many years, *Held* that there is no evidence of record to substantiate these statements, and that statements of counsel cannot take the place of evidence.
3. SAME—MAGNETIC CORE.
   Certain claims to a magnetic core having a protective envelope comprising an oil modified alkyd resin *Held* non-inventive in view of a reference showing a ceramic material as such a protective envelope and a reference showing that oil modified alkyd resins are used as protective coatings.

APPEAL from the Patent Office. Serial No. 433,766.

AFFIRMED.

Harry C. Duft and *Cecil B. Hamilton* for Walters.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the Primary Examiner's decision rejecting claims 17 and 18 in appellant's application for a patent for an invention on a magnetic core, on the ground of lack of invention over the prior art. Claims 1, 3, 8 to 13, inclusive, 19 and 20 of the application have been allowed.

The appealed claims read:

17. In a magnetic core, an annealed core body comprising magnetic particles and an inorganic insulating binder, and a protective envelope enclosing said body, said protective envelope co[illegible]sing a layer having as a binder solely an oil modified [illegible]kyd resin.

18. In a magnetic co[illegible] a core body composed of magnetic material and an inorganic insulating binder, and a protective envelope enclosing said body, said envelope comprising a layer having as a binder solely a reaction product of phthalic acid and glycerine modified with a fatty acid derived from a drying oil.

The references relied on are: Edgar, 2,074,782, March 23, 1937; Gillis, 2,076,230, April 6, 1937.

Appellant's application discloses a magnetic core in the form of a ring, the core being made up of finely divided magnetic particles coated with an insulating binder. The core is enclosed in a protective envelope comprising particles of titanium dioxide dispensed through a layer of an oil modified alkyd resin which may be a reaction product of phthalic acid and glycerine modified with a fatty acid derived from a drying oil.

The patentee Edgar states that fatty oil and modified polyhydric alcohol-polybasic acid resins have been satisfactorily used as protective and decorative coating compositions. The resins described by the patentee are oil modified alkyd resins.

The patent to Gillis discloses a magnetic core body made up of annealed magnetic particles coated with an inorganic insulating binder. The core body is surrounded by a protective envelope in the form of a ceramic coating. The patent clearly discloses everything called for by the appealed claims except that the protective envelope described by the reference patent is formed of ceramic material, instead of a layer having as a binder solely an oil modified alkyd resin, as called for by claim 17, or a layer having as a binder solely a reaction product of phthalic acid and glycerine modified with a fatty acid derived from a drying oil, as called for by claim 18.

The issue presented by this appeal is simply whether, in view of the disclosure in the patent to Edgar, it would require invention to make the protective envelope, disclosed by the patentee Gillis, of the substances called for by claims 17 and 18, instead of making it of ceramic material.

The patent to Edgar discloses that it is old to use oil modified alkyd resins for protective and decorative coatings. Although the patentee does not mention the specific oil modified alkyd resin called for by claim 18, there is clearly no basis for a holding that that resin differs patentably from other oil modified alkyd resins.

Appellant's application states that the resin called for by claim 18 "gives particularly good results" but that "resins derived from other polybasic acids and alcohols can also be used." There is no showing as to any critical or unexpected superiority of the resin called for by claim 18 over other resins of the group defined in claim 17. It follows that if claim 17 does not define invention over the prior art, claim 18 likewise fails to do so.

The patent to Edgar contains the statement that oil modified alkyd resins "are used as protective and decorative coating compositions quite satisfactorily but require longer heat treatments than is often practical to produce hard films." This is a clear disclosure of the broad idea of using such resins for coating purposes. Counsel for appellant contend, however, that the idea of using these resins for coating the particular magnetic core, called for by claims 17 and 18, was one which required the exercise of invention, even though the use of a protective coating of ceramic material on a magnetic core, of the kind defined by those claims, is disclosed in the patent to Gillis.

[1] It is the general rule that, in the absence of any unexpected result, the substitution of one material for another is not a matter of invention. See *In re Otto R. Schoenrock*, 19 CCPA (Patents) 1268, 59 F.2d 235, 14 USPQ 29, 424 O. G. 329; *In re Fischer*, 20 CCPA (Patents) 708, 62 F.2d 96, 15 USPQ 309, 427 O. G. 261; and *In re Clewell*, 22 CCPA (Patents) 936, 74 F.2d 1001, 24 USPQ 298, 455 O. G. 750. The rule stated has been specifically applied to coating and wrapping materials. See *Minton Mfg. Co. et al.* v. *Continental Briar Pipe Co., Inc.*, 93 F.2d 271, 36 USPQ 279; *Triangle Conduit & Cable Co., Inc.* v. *National Electric Products Corporation*, 56 F. Supp. 979, 62 USPQ 350; and *In re Lee*, 33 CCPA (Patents) 896, 154 F.2d 152, 69 USPQ 121, 587 O. G. 505.

[2] Although it is asserted in the brief of counsel for appellant that "the result of using an oil modified alkyd resin coating on a loading coil core was revolutionary" and that "It marked the greatest advance in loading coil manufacture in many years," there is no evidence of record to substantiate that assertion, nor any evidence of record of comparative tests to show superiority of the coating compositions claimed here over the ceramic coating material disclosed in the patent to Gillis. Furthermore, statements of counsel in a brief cannot take the place of evidence. See *In re Burns*, 23 CCPA (Patents) 1091, 83 F.2d 292, 29 USPQ 423, 471 O. G. 246, and *In re Casey*, 35 CCPA (Patents) —, —F. 2d —, 76 USPQ 463, 609 O. G. 252.

[3] The arguments advanced by counsel for appellant have been carefully considered, but we are of opinion that no showing has been made which would justify holding that the substitution of the substances called for by claims 17 and 18 in appellant's application, for the ceramic coating material of the patent to Gillis, required the exercise of invention.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE BOILEAU

No. 5447. Decided June 14, 1948

[— F.2d —; 78 USPQ 146]

1. PATENTABILITY—ANTICIPATION—WINNER OF INTERFERENCE PRIOR ART FOR ALL COMMON SUBJECT MATTER.
   Where appellant's involved application is a division of an application filed prior to the G patent, which application was in interference with the application on which the patent to G was issued, and G was the successful party in the interference, *Held* that even though G's filing date is subsequent to the filing date of appellant's parent application, the patent to G is prior art against the presently involved application as to all subject matter common to the G patent and appellant's application.
2. SAME—CLAIMS PREVIOUSLY ALLOWED.
   Held that the question of patentability of appealed claims must be decided on its merits and not on the basis of holdings made in some other application.
3. SAME—CHURN.
   Certain claims for a churn, which call for nothing more than obvious modifications of prior art structure *Held* properly rejected as non-inventive over such prior art.

APPEAL from the Patent Office. Serial No. 523,754.

AFFIRMED.

Norman E. H. Deletzke for Boileau.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 3, 4, 5, and 9 to 15, inclusive, in appellant's application for a patent for an invention for a churn, on the ground of lack of invention over the prior art. Claims 1, 2, 6, 7, and 8 were allowed by the Board.

Claims 3, 4, 9, and 14 are typical of the appealed claims. They read:

3. A churn including a wooden drum having oppositely disposed wooden end walls, rotatable supports for rotatably supporting said drum, agitating shelves within said drum, recesses in the inner faces of said end walls transverse to the grain of the wood in said end walls, bracket means for supporting said shelves lodged in said recesses having free portions extending out of said recesses, and removable means fixing said shelves upon said bracket means.

4. A churn and butterworker comprising a drum, rotatable supports for rotatably supporting said drum, means for rotating said drum, shelves within said drum, and bracket means supporting said shelves upon said drum supports, said bracket means being so constructed and arranged as to transfer all shelf loading stresses directly to the said drum supports.

9. In a churn and butterworker, a base framework, rotatable supports mounted upon said framework in opposed relation one to another, a cylinder head mounted on each of said supports in opposed relation one to another, spaced shelf means extending intermediate said cylinder heads and abutting against said cylinder heads, tightenable means securely and rigidly binding together said rotatable supports and said drum heads and said spaced shelves to form a rigid rotatable unit thereof by directly securing each of said elements of said rotatable unit one to another, and a cylinder encompassing said cylinder heads and said spaced shelves out of contact with said spaced shelves and supported upon said cylinder heads.

14. A churn and butterworker comprising, in combination, opposed wooden cylinder heads, a wooden cylinder formed solely of staves encompassing and supported upon said cylinder heads, agitator shelves within said cylinder, said shelves being spaced from and being independent of all of said cylinder staves and extending from cylinder head to cylinder head, recesses in the inner face of each of said cylinder heads, each said recess being adapted to receive the end of an agitator shelf, rotatable support means adjacent the outer surface of said cylinder heads, tightenable means for securing said shelves and said cylinder heads to said rotatable support means to form a rigid rotatable unit and for supporting said shelves independently of said cylinder, whereby said cylinder may be removed from said cylinder heads while retaining a rigid rotatable unit formed of said shelves said cylinder heads and said supports securely and rigidly bound together.

The references relied on are: Figg, 1,794,680, March 3, 1931; Clark, 2,066,067, December 29, 1936; Godfrey, 2,334,919, November 23, 1943.

Counsel for appellant moved to dismiss the appeal as to claim 12. The motion will be granted.

Appellant's application discloses a churn comprising a cylindrical wooden body which is mounted for rotation about the axis of the cylinder body. The churn body is formed by two spaced circular heads which are surrounded by staves to form a closed chamber. Within this chamber shelves are provided which are spaced inwardly from the staves and extend longitudinally of the cylindrical body from one head to the other. The shelves are secured at their ends to bracket members which are mounted in and project from slots in the cylinder heads. The shelves and heads thus form a rigid framework independently of the staves. At each end of the churn body is a horizontal journal, mounted on a supporting

frame and rotatably mounted in each journal is a hub member provided with radial arms. The arms are secured to the outer faces of the heads of the churn body at points opposite the points on the inner faces of the heads where the brackets which support the shelves are located. The churn body is thus supported for rotation about its axis.

The patent to Figg discloses a wooden churn formed of staves mounted about spaced heads to provide a cylindrical body. The body is provided with longitudinally extending shelves located within and spaced from the cylindrical wall of the body. The shelves extend from one head to the other and are fitted into recesses in the heads. Horizontal journals are provided at the opposite ends of the body and hubs provided with radial arms are mounted in these journals. The radial arms are secured at their outer ends to the heads, so that the churn is mounted for horizontal rotation about its axis.

The patent to Clark discloses a cylindrical wooden churn comprising a body mounted for horizontal rotation about its axis. The body is formed of spaced heads surrounded by staves and is provided with longitudinal internal shelves extending from one head to the other and spaced from the cylindrical wall of the body. The shelves are attached at their ends to brackets which are fixedly secured to the heads.

The patent to Godfrey discloses a churn comprising a cylindrical body supported at its ends on radial arms extending from hub members which are mounted in horizontal journals. The churn body is made up of spaced heads and staves. Several of the staves extend inwardly to form shelves and the shelves are bolted to the heads and to the radial arms of the end hub members to form a rigid unitary structure.

[1] The patent to Godfrey was issued on an application filed April 24, 1939. Appellant's involved application is a division of a parent application filed January 3, 1939. The parent application, however, was in interference with the application on which the patent to Godfrey was issued, and Godfrey was the successful party in the interference. Under the related circumstances, the Godfrey patent is prior art against appellant's patent and divisional application as to all subject matter common to the Godfrey patent and appellant's application. See *In re Bicknell et al.*, 30 CCPA (Patents) 1250, 136 F.2d 1016, 58 USPQ 553, 556 O. G. 735.

Counsel for appellant urges that the patent to Godfrey is a reference only for the subject matter which was actually in issue in the interference and, in support of that contention, relies upon the case of *In re Williams and McCabe*, 20 CCPA (Patents) 738, 62 F.2d 86, 16 USPQ 66, 426 O. G. 785. That case, however, involved a disclaimer as to the subject matter of the counts only, rather than an award of priority of invention and, accordingly, is not in point here. Under the circumstances of the instant case, the patent to Godfrey is a proper reference for all common subject matter that it discloses.

Claim 3 was rejected on the patent to Clark in view of the patent to Figg. The claim is fully met by the Clark patent except that the brackets which support the shelves are fastened against the end walls instead of being inserted in "recesses in the inner faces of said end walls transverse to the grain of the wood in said end walls" as called for by claim 3. It was the position of the Examiner that in view of the Figg patent which shows the shelves mounted in recesses in the ends of the churn, there would be no invention in locating the shelf supporting brackets of the Clark structure in similar recesses. The Examiner further stated that it would be obvious to locate the recesses transversely of the grain of the wood in order to avoid splitting. We are of opinion that claim 3 is not patentable for the reasons stated by the tribunals of the Patent Office.

Claims 4 and 5 were rejected on the patent to Clark in view of the patent to Godfrey. The Clark patent shows everything called for by those claims except that Clark's shelf supporting brackets are connected to the drum heads, whereas claims 4 and 5 require that the brackets be fixed directly to the rotatable drum supports. The Godfrey patent shows a structure in which the shelves are secured directly to the rotatable drum supports and it would not require invention to employ a similar arrangement in the device disclosed in the patent to Clark.

Claims 9 to 13, inclusive, and 15 stand rejected on the Godfrey patent in view of the patent to Clark. Claims 9, 10, 11, and 13 are fully met by the Godfrey patent except that in the patentee's structure the shelves which are joined to the heads and supporting arms, to form the rigid framework of the churn, are located in the cylindrical body of the churn so that the edges of the shelves form staves, whereas claims 9, 10, 11, and 13 require that the shelves shall lie within the churn. The Clark patent, however, shows an arrangement generally similar to that of the Godfrey patent, with the shelves lying within the churn and spaced from the walls thereof. We are of opinion that it would not require invention to locate the shelves of the Godfrey patent within and spaced from the walls of the churn, as disclosed in the patent to Clark.

Claim 15 is similar to claims 9, 10, 11, and 13, with the additional recitation of a stationary bar extending from end to end of the churn adjacent its axis. Such a bar is shown in the patent to Clark. It certainly would not require invention to add a stationary bar to the Godfrey structure if it were so desired.

Claim 14 is generally similar to claims 9, 10, 11, and 13. It was rejected on the disclosures in the patents to Godfrey, Clark, and Figg. The application of the Godfrey and Clark patents to claim 14 is similar to that hereinbefore stated in connection with claims 9, 10, 11, and 13. Claim 14 contains the further limitation that the shelves are received in recesses in the ends of the churn heads. Such recesses are disclosed in the patent to Figg and, in our opinion, it would not involve invention to employ them in the prior art structures.

[2] Counsel for appellant points out that certain of the involved claims were formerly allowed in appellant's parent application. It is well settled, however, that the question of patentability of appealed claims must be decided on its merits and not on the basis of holdings made in some other application. See *In re Albert C. Fischer*, 18 CCPA (Patents) 1076, 47 F.2d 794, 8 USPQ 481, 409 O. G. 563, and *In re Greider et al.*, 29 CCPA (Patents) 1079, 129 F.2d 568, 54 USPQ 139, 543 O. G. 439.

[3] The arguments of counsel for appellant have been carefully considered but we are of opinion that the appealed claims call for nothing more than obvious modifications of prior art structures.

The appeal is dismissed as to claim 12.

For the reasons stated the decision of the Board of Appeals is affirmed as to claims 3, 4, 5, 9, 10, 11, 13, 14, and 15.

AFFIRMED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

NOTICES

Summary of Recent Rulings on Trade-Mark Classification

1. Filters

Oil filters, and air filters for engines, and all other filters for fluids and liquids are classified in Class 31, FILTERS AND REFRIGERATORS.

Radio filters are classified in Class 21, ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.

Photographic light filters are classified in Class 26, MEASURING AND SCIENTIFIC APPLIANCES.

Human blood filters and plasma filters are classified in Class 44, DENTAL, MEDICAL, AND SURGICAL APPLIANCES.
December 11, 1947.

2. Resinous Plastic Solutions Used for Coatings

The term "coatings" is indefinite in that it covers various kinds of coatings which are classified in various classes according to the specific use. The specific use of the solution as a coating should be named in every case.

Plastic solutions used for coatings are classified as follows:

Resinous plastic solutions for protective coating and waterproofing of leather and sheet material composed partly of leather, in Class 4, ABRASIVE, DETERGENT, AND POLISHING MATERIALS.

Resinous plastic solutions for coating, impregnating, sizing, or waterproofing paper, textiles, or composition sheet material, and for protective coating of the surfaces of fresh fruits and vegetables and other food products against deleterious effects of air, moisture, dust, etc., in Class 6, CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.

Resinous plastic solutions for waterproofing walls, floors, walks and pavements of brick, cement, concrete, etc., and other masonry structures, in Class 12, CONSTRUCTION MATERIALS.

Resinous plastic solutions for waterproofing wood and wooden surfaces; for protective coatings or linings for tanks, silos, pipes, and machinery, to resist corrosion and oxidation; for protective coatings on the interior of electrolytic plating tanks and for the racks, to resist the corrosive action of acids; and for temporary protective coatings on airplanes, engines, machinery, vehicles, and other articles in shipping, storage, or awaiting installation; and resinous plastic solutions, with or without pigments, for protective or decorative coatings on all kinds of surfaces where paints, varnishes, or lacquers are generally used, in Class 16, PAINTS AND PAINTERS' MATERIALS.
January 2, 1948.

3. Resinous Plastic Materials

Some of the more common resinous plastic materials are classified as follows:

Resinous plastic materials in the form of powders, granules, emulsions, solutions, monofilaments, rods, tubes, slabs, slats, and other forms for use in the industrial arts and further manufacture, in Class 1, RAW OR PARTLY PREPARED MATERIALS.

Resinous plastic adhesives in Class 5, ADHESIVES.

Resinous plastic materials for use in the manufacture of inks and inking materials, in Class 11, INKS AND INKING MATERIALS.

Resinous plastic materials in the form of powders, granules, emulsions, pastes or solutions for mixing in cement, concrete, stucco, or other masonry batches, for curing, hardening, waterproofing, etc.; resinous plastic extruded building trim and moldings and architectural forms; and resinous plastic hard tiles, in Class 12, CONSTRUCTION MATERIALS.

Resinous plastic materials for use in the manufacture of paints, varnishes, lacquers, and other paint products, in Class 16, PAINTS AND PAINTERS' MATERIALS.

Resinous plastic solutions for electrical insulating material, in Class 21, ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.

Resinous plastic sheet material for use as a substitute for textiles, in Class 42, KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.
January 2, 1948.

4. Waterproofing Materials

Waterproofing materials are classified as follows:

Waterproofing compositions, compounds, preparations, and dressings for leather, and sheet material composed partly of leather, in Class 4, ABRASIVE, DETERGENT, AND POLISHING MATERIALS.

Waterproofing compositions, compounds, and preparations for impregnating or coating paper, textile fabrics, and the like, in Class 6, CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.

Waterproofing compositions, compounds, preparations, and materials for mixing in cement, concrete, or other masonry batches, or for coating walls, floors, walks and pavements of brick, cement, concrete, etc., and other masonry structures, in Class 12, CONSTRUCTION MATERIALS.

Waterproofing compositions, compounds, and preparations for coating wood or wooden surfaces; and waterproofing compositions, compounds, and preparations in the nature of paint for application to surfaces of all kinds where paints are generally used, in Class 16, PAINTS AND PAINTERS' MATERIALS.
January 5, 1948.

5. Children's Toy Vehicles: Tricycles and/or Velocipedes

Tricycles or velocipedes, also known as "pedalbikes" and "trikes," are essentially toys and are classified in Class 22, GAMES, TOYS, AND SPORTING GOODS.

5.1. Children's Bicycles and Sidewalk Bicycles

Children's bicycles and sidewalk bicycles, also called "sidewalk bikes," which are generally small sizes of regular bicycles, are considered toy vehicles and are classified in Class 22, GAMES, TOYS AND SPORTING GOODS.

The following toy vehicles are also classified in Class 22: Baby walkers, baby walking creepers; walking cars for young children; walking velocipedes; four-wheel carcycles; doll carriages; foot-operated ridable toy vehicles; hand-operated ridable toy vehicles; kiddie cars; ridable toys, including aeroplanes, automobiles, cars and carts, locomotives, tractors, and trucks; ridable gliding horses and horses on wheels; ridable rocking toys; coaster wagons; scooters; soap-box wagons and wheel-sets therefor; children's coasting sleds; children's toy sleighs; and toy wheelbarrows.

Note.—Baby strollers, and combination baby stroller-walkers, are classified in Class 19, VEHICLES.
January 6, 1948.

6. Pressure-Sensitive Adhesive Tape

Friction tapes and adhesive tapes are classified in Class 5, ADHESIVES.

The directive of the Examiner of Trade-Marks, dated August 12, 1946, reclassifying pressure-sensitive adhesive tapes, including the so-called "Scotch Tape," in Class 37, PAPER AND STATIONERY, has been rescinded in view of a decision of the First Assistant Commissioner of Patents on February 19, 1947, in application Serial No. 477,571 (Reg. No. 440,379). Pressure-sensitive adhesive tapes have been reclassified in Class 5, ADHESIVES.
February 12, 1948.

7. Curtain Stretchers

Curtain stretchers have been transferred from Class 50 to Class 24, LAUNDRY APPLIANCES AND MACHINES.

8. Shower Curtains

Shower curtains and matching sets of shower curtains and window curtains have been transferred from Class 13 to Class 42, KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.
March 10, 1948.

9. Zeolitic Materials

Zeolitic materials, for use in filtering liquids and gases and in water softening and purification, have been transferred from Class 6 to Class 31, FILTERS AND REFRIGERATORS.

Note. Many materials which are capable of being used for filtering and water softening and purification, are classified per se in Class 1 or Class 6; however, when these materials are processed for use in filtering media or water softening and purification agents, they are classified in Class 31.
March 12, 1948.

10. Gummed Tape

Gummed tape of cloth, paper, or other material, for general use, gummed cloth in sheets, strips, or tape, for general use; adhesive, gummed, and pressure-sensitive paper for masking by painters, monument makers, and others; and gummed tape or strips of paper or other material, for binding or staying the corners of paper boxes, have been transferred from Class 37, to Class 5, ADHESIVES.

11. Dippers and Ladles

Dippers and ladles have been transferred from Class 13 to Class 23, CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.
March 23, 1948.

12. Gummed Paper Sheets, Strips, and Tape

Gummed paper is the trade term for paper coated on one side with an adhesive which has dried and must be moistened before use.

Gummed paper sheets, used largely for the manufacture of labels, seals, tags, and the like, are classified in Class 37, PAPER AND STATIONERY.

Gummed paper strips, used mostly for making stays on the corners of paper and cardboard boxes, and gummed paper tape used for sealing or fastening the wrapping of packages, are classified in Class 5, ADHESIVES.
May 10, 1948.

13. Flexible Metal Hose and Tubing

Flexible metal hose is classified in Class 35, BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.

Flexible metal tubing used as conduit for electric wires and cables is classified in Class 21, ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.

Flexible metal tubing used as sheathing for flexible shafting or shafts, fitted conduits or fitted connectors as parts of machinery or tools, is classified in Class 23, CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.
May 20, 1948.

14. Smokers' Articles

Smokers' articles, made wholly or partly of precious metal, and including pipes, pipe cases, pipe reamers, cigar and cigarette holders and tubes, cigar cutters, ash trays, humidors, and smoking set trays, have been transferred from Class 28, JEWELRY AND PRECIOUS METAL WARE, to Class 8, SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.

Cigar and cigarette cases, boxes and jars, and tobacco cases and jars, have been transferred from Class 2, RECEPTACLES, and Class 28, JEWELRY AND PRECIOUS METAL WARE, to Class 8, SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.

Cigar and cigarette lighters, and flints and wicks therefor, have been transferred from Class 21, ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES, Class 28, JEWELRY AND PRECIOUS METAL WARE, and Class 34, HEATING, LIGHTING AND VENTILATING APPARATUS, to Class 8, SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.
May 20, 1948.

15. Receptacles for Cosmetics

The following goods made of precious metal have been transferred from Class 28 to Class 2, RECEPTACLES:

(a) Compacts, or powder and rouge containers in the nature of compacts, being variously called vanity cases, vanity boxes, vanities, powder cases, compact cases, powder compact cases, compact boxes, holders for face powder compacts (i. e. for cake face powder), rouge containers, rouge boxes, dorine boxes;
(b) Lipstick holders and lipstick cases;
(c) Lip salve cases and lip salve containers for pocket use;
(d) Eyebrow pencil holders.
May 26, 1948.

16. Prayer Beads and Rosaries

Prayer beads and rosaries made wholly or partly of wood, plastic, glass, or other non-precious materials have been transferred from Class 50 to Class 28, JEWELRY AND PRECIOUS METAL WARE.

17. Wrist Watch Straps

Wrist watch straps, wrist watch bands, and wrist watch loops, made of leather, cloth, plastic, or other non-metallic material have been transferred from Class 40 to Class 28, JEWELRY AND PRECIOUS METAL WARE.

18. Radar

Radar, sonar and loran apparatus are classified in Class 26, MEASURING AND SCIENTIFIC APPLIANCES.
June 1, 1948.

19. Chains

Chains for conveying, elevating and power transmission, called variously bicycle chains, chain drives, conveyor chains, motor drives, motor front and chains, power transmission chains, sprocket chains, etc., have been transferred from Class 13 to Class 23, CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.
June 3, 1948.

20. Measuring and Scientific Instruments

Barometers, compasses, lorgnettes and lorgnons, magnifying glasses, monocles, opera glasses, thermometers, other than clinical, eye glass and spectacle cases, and cases for thermometers, other than clinical made of precious metal, have been transferred from Class 28 to Class 26, MEASURING AND SCIENTIFIC APPLIANCES.

21. Spurs, Whips, and Crops

Spurs, whips, and crops made of precious metal have been transferred from Class 28 to Class 3, BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.
June 7, 1948.

22. Match Boxes and Holders

Match boxes, match cases, match holders, match safes and match box holders made of precious metal, all for smokers' use, have been transferred from Class 28 to Class 8, SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.

23. Canes and Umbrellas

Canes and walking sticks, and handles or heads for canes, walking sticks, umbrellas and parasols made of precious metal, have been transferred from Class 28 to Class 41, CANES, PARASOLS, AND UMBRELLAS.

24. Notions

Button hooks, curling irons (non-electric), glove stretchers, pincushions, sewing thimbles, shoe horns, yarn holders, silk winders, knitting needles, crochet hooks, and tatting shuttles made of precious metal, have been transferred from Class 28 to Class 40, FANCY GOODS, FURNISHINGS, AND NOTIONS.

25. Pens and Pencils

Pens, pen points, pen sets, pencils, pen and pencil holders, and pen and pencil cases made of precious metal have been transferred from Class 28 to Class 37, PAPER AND STATIONERY.

June 8, 1948.

26. Knives and Scissors

Pocket knives, pen knives, scissors, and shears, made wholly or partly of precious metal, have been transferred from Class 28 to Class 23, CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.

June 15, 1948.

27. Pocketbooks and Frames Therefor, Card and Key Cases

The following goods have been transferred from Class 28 to Class 3, BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS:

(a) Pocketbooks, handbags, and purses, made wholly or partly of precious metal, including mesh and beaded types;
(b) Coin purses, made wholly or partly of precious metal;
(c) Coin cases—that is, leather cases with fittings or trimmings of precious metal;
(d) Billfolds and wallets, trimmed with precious metal;
(e) Card cases, stamp cases, receipt cases, and pass cases—that is, leather cases trimmed with precious metal;
(f) Frames made wholly or partly of precious metal, for pocketbooks, handbags, and purses;
(g) Key cases and key containers—that is, leather cases with fittings or trimmings of precious metal.

June 16, 1948.

J. H. MERCHANT,
Executive Examiner for Trade-Mark Operations.

Classification Bulletin No. 102

Classification Bulletin No. 102, containing all orders affecting classification during the period from July 11, 1947, to August 14, 1947, inclusive, and including the subclass schedule and definitions of class 343, Communications, Radiant Energy, is now available and may be purchased from the Commissioner of Patents for ten cents a copy.

Erratum

In the notice of republication under section 12-C of the Trade-Mark Act of 1946 of registration No. 304,840 appearing in the OFFICIAL GAZETTE of May 18, 1948, page 585, for, "Republished by Varco Incorporated," read, *Republished by Uarco Incorporated.*

Examination

In accordance with the provisions of Rule 17 of the Rules of Practice, an examination for the registration of attorneys and agents to practice before the United States Patent Office will be held on Monday, November 15, 1948.

This examination will be given under the direction of the Civil Service Commission, and may be taken in any of the cities of the country in which the Civil Service Commission regularly conducts examinations. Applications to take the examination must be directed to the Commissioner of Patents and filed in the Patent Office not later than October 20, 1948.

Application blanks may be obtained from the Clerk of the Committee on Enrollment, Room 1859, Department of Commerce Building.

THOMAS F. MURPHY,
Chairman, Committee on Enrollment.

August 16, 1948.

Disclaimers

Re. No. 21,177.—*Jean A. H. Barkeij*, Altadena, Calif. INTERNAL COMBUSTION ENGINE. Patent dated Aug. 22, 1939. Disclaimer filed July 30, 1948, by the inventor.

Hereby limits the scope of claim 11 for the 6 cylinder species to a cylinder angle of 180°, and limits accordingly the crankpin arrangement of crankpins 1, 3, 5 to the sequence 1, 5, 3 in clockwise direction as shown in Fig. 2, and of crankpins 2, 4, 6 to the sequence 2, 6, 4 in clockwise direction as shown in Fig. 4, said 6 crankpin arranged at 60° intervals and numbered uneven in one group and even in the other group.

Hereby limits the scope of claim 11 for the 8 cylinder species to a cylinder angle of slightly less than 90°, and limits accordingly the crankpin arrangement to four pairs of aligned crankpins at 90°, crankpins 1 and 2 aligned opposite crankpins 7 and 8 at 180°, crankpins 3 and 4 aligned opposite crankpins 5 and 6 at 180°, said crankpins numbered uneven in one group, and even in the other group.

Hereby limits the scope of claim 13 for the 6 cylinder species to an angle of 180°, and limits accordingly the crankpin arrangement of crankpins 1, 3, 5 to the sequence 1, 5, 3 as shown in Fig. 2, and of crankpins 2, 4, 6 to the sequence 2, 6, 4 as shown in Fig. 4, so that the crankpins appear in the sequence 1, 4, 5, 2, 3, 6 in clockwise direction at 60° intervals, said crankpins being numbered even in one group and uneven in the other group.

Hereby limits the scope of claim 13 for the 8 cylinder species to the variety having a cylinder angle slightly less than 90°, and limits accordingly the crankpin arrangement to four pairs of aligned crankpins at 90°, crankpins 1 and 2 aligned at 180° to crankpins 7 and 8 aligned, and crankpins 3 and 4 aligned at 180° to crankpins 5 and 6 aligned, said crankpins numbered even in one group and uneven in the other group.

Hereby limits the scope of claim 15 for the 6 cylinder species to the variety having an angle of 180°, and limits accordingly the crankpin arrangement to an arrangement whereby the crankpins 1, 3, 5 of Fig. 1 are arranged 1, 5, 3 in clockwise direction, and crankpins 2, 4, 6 of Fig. 1 are arranged 2, 6, 4 in clockwise direction, said crankpins numbered uneven in one group and even in the other group, and further arranged at 60°.

Hereby limits the scope of claim 15 for the 8 cylinder species to the variety having an angle of 90°, and limits accordingly the crankpin arrangement whereby the crankpins 1 and 2, 3 and 4, 5 and 6, 7 and 8, are aligned in pairs, so that crankpins 1, 2 are at 180° to crankpins 7 and 8, and crankpins 3, 4 are at 180° to crankpins 5, 6, said crankpins being numbered uneven in one group and even in the other group.

Hereby limits the scope of claim 24 for the 6 cylinder species to the limiting angle of 180°, and the crankpin arrangement accordingly to the sequence 1, 4, 5, 2, 3, 6 in the direction of rotation, the crankpins being numbered even in one group and uneven in the other group.

Hereby limits the scope of claim 24 for the 8 cylinder species to the variety having an angle slightly less than 90°, and limits accordingly the crankpins to a position whereby crankpins 1 and 7 are arranged at 180°, and crankpins 3 and 5 at 180° as shown in Figs. 10 and 11, and crankpins 2 and 8 at 180°, and crankpins 4 and 6 at 180° as shown in Figs. 10 and 11, said four pairs of aligned crankpins arranged at 90°, the crankpins being numbered even in one group and uneven in the other group.

2,219,393.—*Harry H. McAdam*, Los Angeles, Calif. DEFROSTING DEVICE. Patent dated Oct. 29, 1940. Disclaimer filed Aug. 14, 1948, by the assignee, *Refrigeration Engineering, Inc.*; the inventor, joining, assenting, and acquiescing.

Hereby enters this disclaimer to claims 1 to 9, inclusive, and claims 12 and 14 of said specification.

2,383,636.—*Walter A. Wurth*, Cranford, N. J. TEMPERATURE CONTROL OF CATALYTIC REACTIONS. Patent dated Aug. 28, 1945. Disclaimer filed Aug. 11, 1948, by the assignee, *Standard Oil Development Company.*

Hereby enters this disclaimer of claim 4.

Adjudicated Patent

(D. C. Ohio) Palmer patent, No. 2,096,289, for machine drive arrangement, claims 1 and 2 *Held* invalid and not infringed. *Palmer* v. *Sun Oil Co.*, 78 F. Supp. 38; 77 USPQ 560.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,362,444, W. J. Blanchard and C. S. J. MacNeil, Propeller mechanism, decided May 28, 1948, claims 13 and 14.

Pat. 2,423,304, W. A. Fitch, Pulse producing system decided Aug. 11, 1948, claims 1 and 2.

Cancellation Notice

Carl Cannon, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Handy & Harman, Inc., 82 Fulton St., New York 7, N. Y., to effect the cancellation of trade-mark registration of Carl Cannon, 6309 Yale Ave., Chicago, Ill., No. 256,286, dated May 14, 1929, and the notice of such proceeding sent by registered mail to the said Cannon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Cannon, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

Aug. 10, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,314,430. DIP STICK. Patented Mar. 23, 1943. A dip stick for determining the level of oil in the tank of a vehicle. The stick is slidably mounted in a vertical metal tube cut away at the bottom to form a substantially semi-cylindrical portion. The lower end of the stick is provided with a scale which is exposed through the cut-away portion of the tube. The tube and stick are positioned in a close-fitting outer cylindrical casing which extends fully to the bottom of the oil tank. The stick and tube may be removed from the casing so that the scale may be read. Advantages of the construction are that the stick will not drip as it is being read and that, inasmuch as the stick is held out of the oil, it is protected from splashing when the vehicle is in motion. (Owner) Isabel V. MacDuffie, 40 Brattle St., Worcester 5, Mass. Group 38—31. Reg. No. 9,886.

Pat. 2,440,773. BRICK SIDING CUTTER. Patented May 4, 1948. A hand-operated (or electrically driven) machine for cutting imitation brick or stone siding sheet material. Machine scores face of a shingle or panel and perforates back for easy breaking over steel bar on top of machine. Comprises a table having an arm pivotally mounted adjacent one corner and extending diagonally across top of table. A cutter wheel is carried by this arm adjacent edge of table. Toothed wheels for moving the work are mounted below table surface, the upper portions projecting through slots in table surface in perpendicular planes parallel to and closely adjacent the plane of the cutter wheel. Means are provided for simultaneously rotating all toothed wheels. May be taken up on scaffold if desired. (Owner) J. Virgil Hostetter, 5906 Berwyn Road, Berwyn Heights, Md. Groups 26—28; 35—69. Reg. No. 9,887.

Pat. 2,442,565. ELECTRON OFF AND ON RELAY TUBE. Patented June 1, 1948. A radio tube with means for deflecting or rotating a beam of electrons to produce a large voltage change quickly. The electron flow through the output circuit may be instantly stopped or started by varying the potential on the control grid. The control electrodes are operated at an adjustable positive potential. An increasing potential on the grid will cause the potential on the control electrode to become less positive, which will rotate the electrons forward and backward from the anode causing a sharp increase in potential across the load resistor. (Owner) John H. Homrighous, 1029 Wenonah Ave., Oak Park, Ill. Group 36—61. Reg. No. 9,888.

Pat. 2,442,104. DEVICE FOR INDICATING UNDERINFLATION OF TIRES. Patented May 25, 1948. A heat-responsive element for automatically indicating the under-inflation or over-heating of pneumatic tires. A conventional air valve is attached to each tire and passes through a thermostat in the tire consisting of a casing of heat-absorbing metal which houses a double-leaf bi-metallic element. The thermostat is responsive to tire temperature and closes a circuit when the tire temperature exceeds a predetermined maximum. Current is conducted through the thermostat to a lamp on the instrument panel by leads from the bi-metallic element, indicating to the driver that one of his tires is under-inflated. (Co-owner) Harry D. Twombly, 5105 N. E. 109th Ave., Portland, Oreg. Groups 30—11; 38—31. Reg. No. 9,889.

Pat. 2,442,736. PORTABLE ADJUSTABLE HOLD-ALL CLAMP. Patented June 1, 1948. A stand for supporting a flashlight or other lighting equipment at any desired angle. An open ring-like base has a central upwardly bowed plate forming a bridge piece. A sectional adjustable upright is bolted at center of the bridge piece, the upper section of which has an out-turned flange to which an adjustable clamp is bolted. Parallel plates of the clamp have cup-shaped ends positioned on the ball terminals of the upright. The ball terminal at upper end has a stem which supports a springy-jawed U-shaped cradle for holding the flashlight. May be carried in the hand or hung on a support, and when not in use may be folded. (Owner) Hudson D. Valentine, 402 E. Bates St., Wellsville, Mo. Groups 33—59; 40. Reg. No. 9,890.

Pat. 2,441,191. HANGER. Patented May 11, 1948. An adjustable support for clamping various sizes and types of pipes and shaft bearings. A pair of spaced uprights has an adjustably attached metal cross member. Directly above the cross member is a spaced shorter horizontal member bolted at both ends to it. The two horizontal members each have a cut-out portion at center of facing sides, between the two bolts, to receive a pipe, bearing, shaft, or the like. Readily changeable into either floor-supported or ceiling-suspended brackets by reversing the upright members. (Owner) Leonard Glassheim. Address correspondence to Maxwell E. Sparrow, 535 Fifth Ave., New York, N. Y. Group 35—69. Reg. No. 9,891.

Pat. 2,442,382. COMPENSATOR FOR FIREARMS. Patented June 1, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A recoil-reducing compensator for attachment parallel to and below a gun barrel adjacent the muzzle. Designed to receive gases from the barrel before the bullet is discharged, thus decreasing the recoil and muzzle jump of a gun. Comprises a cylindrical steel body, having a small-bore and a large-bore portion with connecting nozzle. Compensator is closed at both ends and has laterally disposed forward-directing slots on either side. As bullet is pushed along the barrel by gases under high compression, the gases flow through apertures in barrel through communicating ports into small-bore section of compensator, with a force which will oppose the inclination of the muzzle to jump when bullet is discharged. Gases are discharged through nozzle into large-bore portion and strike the curved surface of the closing cap, which reverses the direction of flow. Being discharged at reduced velocity through slots on sides of compensator, gases are directed away from the operator of gun and part of the firing noise is muffled. A sleeve is provided for closing slots when a grenade launcher is used. (Owner) James E. Sieg, 1302 Arvil Court, Baltimore 25, Md. Group 33—97. Reg. No. 9,892.

Pat. 2,442,498. TIMING MECHANISM FOR SPRINKLER SYSTEMS. Patented June 1, 1948. Hydraulically controlled water-distributing system for sprinkling lawns, truck farms, etc. Water is delivered from a main pipe line to a drum, about which a casing carrying branch pipes is mounted. Drum is rotated intermittently by a ratchet wheel set in motion when buckets at ends of a rocker beam are filled with water. Buckets receive water from a branch pipe controlled by valves, and are provided with outlet flap valves in bottom of bucket which are normally closed and adapted to open when bucket strikes a rod stationed underneath. As filling of bucket tilts rocker beam, one of two spring-spaced arms pivotally mounted downward on rocker beam engages ratchet wheel at side of drum. By rotation of drum, the outlet opening registers successively with branch pipes carrying water from drum to areas to be watered. Time of filling and emptying of bucket may be controlled to regulate rotation of drum. (Owner) Ben H. Kooken, 1818 West Augusta, Spokane, Wash. Group 35—69. Reg. No. 9,893.

Pat. 2,443,050. EQUALIZED TENSION DUAL BLADE SAW APPARATUS. Patented June 8, 1948. A power-operated dual saw apparatus to simultaneously cut the scrap end and a test piece from a metal product, maintaining uniform and equalized tension of the two blades to assure exact parallel saw cuts. A pair of horizontally extending saw blades in parallel spaced relation to each other are detachably connected in slots in a pair of adjustable end holders. An equalizing disk is revolubly mounted in the end holders between the slots. One end of each blade extends into a slot of the adjustable end holder and is pivotally engaged on a connecting pin of the disk. (Owner) Frank C. Menking, 313 Rustic Ave., Pittsburgh 10, Pa. Group 35—43—69. Reg. No. 9,894.

Pat. 2,443,559. MECHANICALLY OPERATED BELL. Patented June 15, 1948. Operated by a pull cable connected to end of the trigger, placing the springs at ends of a bell crank lever under tension. The head of the lever swings in an arc and engages a lug carried by the tapper bar, moving the lug downwardly against the spring in the lower portion of housing. As the head passes the lug, the spring forces the tapper bar against the tapper, which is thrown against the bell, producing a signal. The trigger head swings downwardly, clearing the lug, and the tapper falls to normal position. Designed for factories or other places where there is excessive noise. (Owner) Fred T. Garceau, 527 County Road, Negaunee, Mich. Group 34—91. Reg. No. 9,895.

Pat. 2,098,001. RUBBER BAND GUN. Patented Nov. 2, 1937. A trigger-operated toy pistol is adapted to shoot rubber bands. Comprises a stock and a barrel, with rods vertically spaced in a hollow chamber near the trigger end of the barrel. One end of each rubber band encircles the end of the barrel and is stretched to encircle the top of one of the rods, which projects above the barrel through an aperture. The rods are slidably mounted to be raised slightly by action of the trigger so that a pivoted section of the rod swings toward the barrel, releasing the rubber band with considerable force. (Owner) Angeline Gagnon, Lupton, Mich. Group 39—41. Reg. No. 9,896.

Pat. 2,443,349. PORTABLE DERRICK HOIST. Patented June 15, 1948. Hoist has an extensible and collapsible mast comprised of a fixed outer section and an extensible and retractible inner section. A guided and vertically movable carrier is supported by arms hinged to the top of the extensible mast. A guiding means functions to handle a load, such as a wall board, supported and received by the carrier when lowered. The board may be held in position by the mast to an overhead or ceiling support to which the board is being fixed. The hoist is cable operated and may be adapted to a variety of other uses by slight modification. (Owner) P. J. Foster, Corinth, Miss. Group 35—31. Reg. No. 9,897.

Pat. 2,440,978. ANGLE CUTTER. Patented May 4, 1948. This patent shows a cutter attachment for a machine tool such as a reamer. A series of cutter blades are received in the slots of a cutter head which acts as a hub. Bolts extend transversely through the slots and hold the blades in place, thus permitting selective adjustment to vary the pitch of the blades. The blades may also be reversed for right or left hand cutting operations. The cutter is usable on milling machines for cutting aluminum, plastics, or wood. (Owner) John E. Schlenkert, 7420 Ironwood, Detroit 4, Mich. Groups 33—73; 35—43. Reg. No. 9,898.

Pat. 2,442,905. NONELASTIC CONSTANT EQUALIZED TENSION GARTER. Patented June 8, 1948. Self-adjusting garters on a girdle are designed for constant equalization of tension upon hose. A hanger member is riveted to girdle above each hip area, and a pair of guide loops are spaced beneath each hanger at lower edge of girdle. A non-elastic strap is loosely looped through the hanger, trained downward through the guide loops to loosely hold hose clasp (one at front and one at rear), and then upward so that one end of strap is fastened at front and other end at rear of girdle. As the strap slides easily through hanger and through hose clasps, tension on the hose tends to be equalized. (Owner) J. Newton Rhodes, 62 Brook St., Riverhead, N. Y. Group 23—42—84. Reg. No. 9,899.

Pat. 2,442,926. APPARATUS FOR WASHING MILKING MACHINES. Patented June 8, 1948. A supporting frame has a washing tub mounted at one side and a water tank at the opposite side. A valve-controlled drain pipe leads from bottom of washing tub into the water tank. An air pressure pipe leads from top of water tank over the washing tub. A water pipe leads from the bottom of the water tank over the washing tub parallel with the air pressure pipe. Both pipes are valve controlled and meet at the delivery nozzle above the washing tub. The cleansing solution is placed in the tub and flows into the tank through the drain pipe. The valves to the drain pipe and feed pipe are closed and the compressed air valve opened to permit compressed air to flow into the tank upon the cleansing solution. When the air gauge registers the desired pressure, the feed-pipe valve is opened and the solution flows through the pipe and nozzle and is sprayed through a hose connecting the nozzle and the milking unit at the side of the washing device. (Owner) R. C. Herman, 106 East Stewart, Rossville, Ill. Group 35—51. Reg. No. 9,900.

Pat. 2,443,132. SEWING CABINET. Patented June 8, 1948. The forward portion of sewing cabinet has a flat upper wall serving as a work table with a drawer at front for scissors, sewing, etc. An upwardly projecting rear portion forms a chamber for spools of thread. The spools are rotatably mounted upon rods between spaced bars so the spools are arranged in horizontal rows. Thread holders are provided on bar beneath each spool for easy unwinding and to prevent thread from becoming tangled. A hinged glass door covers chamber and swings upwardly when opened. (Owner) Richard H. Forsell. Address correspondence to Glenn L. Fish, 927 West Main Ave., Spokane, Wash. Groups 25—99; 39—81; 40. Reg. No. 9,901.

Des. Pat. 149,878. DESIGN FOR A TRIPOD FOR PHOTOGRAPHIC PURPOSES. Patented June 8, 1948. (Owner) George C. Kammermeyer, 4720 San Francisco Ave., St. Louis 15, Mo. Group 39—12. Reg. No. 9,902.

Pat. 2,444,517. PLATING PIECE. Patented July 6, 1948. Made of two cup-shaped parts telescopically displaceable, with a spring by which the height of the piece may be varied during the game to change its value. In the game of checkers, for instance, a checker may be converted into a King, or vice versa, by pressure on handles to actuate the spring and locking mechanism. (Owner) Paul Levy, 600 West 161 St., Apt. 8A, New York 32, N. Y. Groups 39—41; 40. Reg. No. 9,903.

Pat. 2,326,566. AUTOMOBILE LICENSE PLATE. Patented Aug. 10, 1943. This invention relates to an auxiliary indicia-bearing attachment for conventional license plates. A metal ribbon carrying the year tag is threaded through registering slots at one side of the license plate and supporting bracket, carried aronnd back of plate, and through a lower slot to front again, where the ends are sealed together. The attachment is bolted with the license plate to the supporting bracket. (Owners) William H. Ritchie and Jessie H. Ritchie. Address correspondence to William H. Ritchie, 50 West Maple Ave., Apt. 16-C, Merchantville, N. J. Groups 33—72; 39—81. Reg. No. 9,904.

Pat. 2,393,227. APPARATUS FOR TREATING ORES OR OTHER MATERIALS. Patented Jan. 22, 1946. A drying stack for removing moisture from iron ores. A conveyor deposits a mixture of lump and fine ore in a hopper which discharges the ore into the interior of a circular upright stack where it falls over a conical bell member under the force of gravity and passes into the stack. The bell is rotated and distributes the ore below the bell. The fine ore is distributed adjacent the inner surfaces of the walls, and the lump ore occupies center of the stack. A number of triangular heating ducts having escape openings are positioned in the stack in the downward path of the ore between the bell member and discharge opening. The apparatus and process produce an end product having the same form as that which the ore had prior to its entering the stack. (Owner) Mary Frenzel Anderson, 301 Frantz St., Buhl, Minn. Group 35—33. Reg. No. 9,905.

Pat. 2,443,214. TOILET. Patented June 15, 1948. Toilet is constructed so that it may be concealed in a compartment in a wall between adjoining rooms, with a door from each room providing access to the compartment. The bowl is mounted for swinging movement into and out of the compartment when either door is opened and closed. When one door is opened, the other is automatically locked, and a double-acting slide valve actuated to fill a flush tank. When the door is closed, the slide valve is moved to another position to flush the bowl. A vertically movable bracket on the inside of each door is adapted to detachably engage a link pivoted to the bottom of the bowl. When both doors are closed, the handle of either door may be turned to move the bracket of the selected door into engagement with the link to swing the bowl. A vertical pipe formed integrally with the back of the bowl for turning movement therewith has its lower end connected to the usual waste pipe and its upper end connected to a valve housing positioned above the door openings. (Owner) Emory C. Williams, 700 Godfrey Ave., Fort Payne, Ala. Group 32—61. Reg. No. 9,906.

United States Government Owned Patents

The following three patents have been assigned by the inventors to the United States of America as represented by the Secretary of the Interior: Pat. 2,441,132 by Harold L. Blakey; Pat. 2,442,790 by Ernest Ray Warner; Pat. 2,443,176 by Lloyd H. Banning. Licenses to practice the inventions will be issued on a non-exclusive and royalty-free basis. Inquiries concerning licenses should be addressed to the Solicitor, U. S. Department of the Interior, Washington 25, D. C.

Pat. 2,441,132. SHIELD FOR TRACTORS. Patented May 11, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A brush shield for attachment to the frame of a tractor and brush-cutter machine which provides a barrier to the brush and flying sticks, protects the exposed mechanical parts of the tractor, and guards the operator from injury. A base frame encircles the superstructure of the tractor and is supported by the tractor chassis. A number of angle riser members are secured to the base frame to provide a series of U-shaped rider supports. A number of bar rider members interconnect the rider supports and present brush fender edges extending upwardly from the front of the frame and along the sides and downwardly at rear of the frame. May be supported by a plate or bracket welded to the rear member of the chassis frame and the rear frame member of the cab section. Group 35—21. Reg. No. 9,907.

Pat. 2,442,790. METHOD FOR IDENTIFYING CROSS WIRES IN OPTICAL INSTRUMENT RETICULES BY THE USE OF POLARIZED LIGHT. Patented June 8, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Cross wires of optical instrument reticules may be identified by this apparatus for such purposes as determining whether or not the material used has met contract specifications. The wires are subjected to polarized light as the reticule is turned in a holder associated with a pair of microscopes through which the wires are observed. A platinum wire is seen as a series of fine lines, while that of glass or spider web is seen as a solid or a translucent line respectively. Acts as an aid in replacing broken cross wires: A new wire is held under tension on the free ends of a light spring wire device having a central open coiled loop. After alignment, the wires are cemented in the proper grooves of the graduated scale of the reticule, and the spring device detached. Neither the reticule nor the cross wires are damaged in the process. Group 39—13. Reg. No. 9,908.

Pat. 2,443,176. V-OPENING SCREEN. Patented June 15, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A non-clogging screen for the elimination of flat and elongated pieces from a mass of crushed rock or coal. A series of screening bars are detachably or permanently secured to a support at one end. The bars consist of alternating long and short bars and have a down-turned portion at one end rigidly secured to the other support, forming V-shaped openings through which flat pieces may pass as the crushed rock is vibrated. This device may be applied to a stationary screen by the addition of side members parallel to the bars or may be applied to the cylindrical type by substituting circular members for the supporting members. Group 35—69. Reg. No. 9,909.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 7, 1948

[VOL. 614. NO. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 520,193. TRAVER CORPORATION, Chicago, Ill. Filed Apr. 4, 1947.

TRALON

FOR PLASTIC MERCHANDISE BAGS AND ENVELOPES FOR PACKAGING FOOD AND GENERAL MERCHANDISE.
Claims use since Mar. 12, 1947.

CLASS 5

ADHESIVES

Ser. No. 509,025. GEORGE C. NIXON, doing business as The Steel Treating Equipment Co., Dearborn, Mich. Filed Sept. 13, 1946.

KLINCH

FOR GRAIN CEMENT—NAMELY, A SODIUM SILICATE CEMENT FOR CEMENTING GRAINS OF ABRASIVE MATERIAL TO POLISHING, BUFFING, AND ABRASIVE WHEELS AND TO OTHER SURFACES FOR CARRYING GRAINS OF ABRASIVE MATERIAL.
Claims use since July 31, 1941.

Ser. No. 519,806. BENJAMIN FOSTER COMPANY, Philadelphia, Pa. Filed Mar. 29, 1947.

LINO-TECT

The word "Lino" is disclaimed apart from the mark.
FOR LINOLEUM CEMENT.
Claims use since Mar. 17, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 498,652. FERDINAND RUGGIERO, INC., Boston, Mass. Filed Mar. 20, 1946.

Lady EVE

FOR COSMETICS—NAMELY, FACE CREAMS AND LOTIONS, FACE POWDER, DUSTING POWDER, ROUGE, LIPSTICK, NAIL ENAMEL, ENAMEL REMOVER, COLOGNE, SHAMPOO, MASCARA, EYE-BROW PENCIL, AND EYE SHADOW.
Claims use since Mar. 4, 1946.

Ser. No. 505,373. MARVIN E. WALLIS, Salt Lake City, Utah. Filed July 10, 1946.

NOAIR WRAP

FOR THERMOPLASTIC WAX SOLD IN SLAB FORM, ADAPTED TO BE MELTED AND USED AS A PROTECTIVE COATING FOR ARTICLES OF FOOD AND THE LIKE.
Claims use since Jan. 25, 1946.

Ser. No. 509,691. BOOTS PURE DRUG COMPANY LIMITED, Nottingham, England. Filed Sept. 25, 1946.

FLAVAZOLE

FOR PHARMACEUTICAL PREPARATIONS OF SULPHATHIAZOLE COMPOUNDS FOR ANTISEPTIC PURPOSES.
Claims use since July 30, 1945.

Ser. No. 510,093. LANTEEN MEDICAL LABORATORIES, INC., Chicago, Ill. Filed Oct. 2, 1946.

ESTROGEL

FOR EXTROGENIC SUBSTANCE FOR PERCUTANEOUS THERAPY.
Claims use since Aug. 16, 1946.

Ser. No. 517,954. ARKANSAS COMPANY, INC., Newark, N. J. Filed Feb. 24, 1947.

ANTHOMINE

FOR ASSISTANTS USEFUL IN DYEING PROCEDURES AND TEXTILE PROCESSING.
Claims use since Dec. 1, 1946.

Ser. No. 518,057. FRANK STEVEN COSMETIC CORPORATION, Chicago, Ill., assignor to Sol Morton. Filed Feb. 24, 1947.

Purr-r-r

FOR HAND CREAM.
Claims use since Jan. 4, 1945.

Ser. No. 523,952. FIRST TEXAS CHEMICAL MFG. CO., Dallas, Tex. Filed June 11, 1947.

C-A-P-D

FOR PHARMACEUTICAL PREPARATION IN THE FORM OF CAPSULES, TO BE USED TO GIVE TEMPORARY RELIEF OF DISCOMFORTS DUE TO COLDS, HEADACHE, NEURALGIA, OR OTHER MINOR MUSCULAR ACHES AND PAINS.
Claims use since January 1947.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 511,969. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Nov. 2, 1946.

REDI-LITH

FOR PRINTING INK.
Claims use since Aug. 2, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 521,675. NATIONAL LOCK COMPANY, Rockford, Ill. Filed May 1, 1947.

TRIMIT

FOR SCREWS.
Claims use since September 1946.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 512,874. WILLIAM L. ULMER, doing business as Superior Flux Company, Cleveland, Ohio. Filed Nov. 19, 1946.

ZINC-TITE

No claim is made to the word "Zinc" apart from the mark.
FOR SOLDER.
Claims use since Oct. 10, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 461,684. EUREKA VACUUM CLEANER COMPANY, Detroit, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan. Filed June 26, 1943.

EUREKA

FOR LUBRICATING GREASE.
Claims use since 1920.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 513,437. THE MERCHANTS CHEMICAL COMPANY, Stamford, Conn. Filed Nov. 29, 1946.

DYNA-FLEX

FOR PROTECTIVE RESINOUS COATING COMPOSITION IN THE NATURE OF PAINT FOR USE AS A STRIPABLE COATING TO PROTECT PARTS, SURFACES OR APPARATUS OF METAL, GLASS OR STONE AGAINST ATMOSPHERIC CONDITIONS, ABRASION, ACIDS, ALKALIES OR OTHER CORROSIVE OR EROSIVE AGENCIES.
Claims use since Nov. 11, 1946.

CLASS 19

VEHICLES

Ser. No. 511,688. R. G. LE TOURNEAU, INC., Peoria, Ill. Filed Oct. 29, 1946.

LETOURNEAU
LET
EQUIPMENT

The words "Le Tourneau Equipment" are disclaimed apart from the mark.
FOR TRAILER TRUCKS AND SELF-PROPELLED LOAD HAULING TRUCKS.
Claims use since Nov. 13, 1940.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 519,666. INTERCHEMICAL CORPORATION, New York, N. Y. Filed Mar. 27, 1947.

ROYAL CLOTH

No claim is made to the word "Cloth" apart from the mark as shown.
FOR TABLE, SHELF, STAIR, FLOOR, AND WALL OILCLOTH.
Claims use since Feb. 25, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 502,720. ARTHUR J. SADONY, doing business as Educational Research Laboratories, Montague, Mich. Filed May 24, 1946.

CATAPULT

FOR TOY AIRPLANES, DARTS, AND FLYING PROJECTILES ATTACHED TO A STICK TO BE WHIPPED THROUGH THE AIR BY WHICH THE TOY IS PROJECTED BY CENTRIFUGAL FORCE.
Claims use since Feb. 28, 1946.

Ser. No. 507,498. URBANA MANUFACTURING COMPANY, Urbana, Ohio. Filed Aug. 15, 1946.

The CONSTRUCTIONEER

FOR TOY METAL BUILDINGS SETS.
Claims use since Mar. 27, 1946.

Ser. No. 508,243. PLASTOMIC PRODUCTS CO., INC., New York, N. Y. Filed Aug. 29, 1946.

PLASTO-MAGIC

FOR TOYS—NAMELY, CONSTRUCTION AND PUZZLE TOYS.
Claims use since Aug. 12, 1946.

Ser. No. 513,323. MANTUA METAL PRODUCTS COMPANY, Woodbury Heights, N. J., assignor to Mantua Metal Products Co., Inc., Woodbury Heights, N. J., a corporation of New Jersey. Filed Nov. 27, 1946.

MANTUA METAL PRODUCTS COMPANY

Exclusive use of the words "Metal Products Company" and the representation of a railroad crossing sign post are disclaimed.
FOR MODEL OR MINIATURE RAILWAY CARS AND EQUIPMENT FOR USE AS TOYS.
Claims use since Oct. 30, 1945.

Ser. No. 513,418. HORROCKS-IBBOTSON COMPANY, Utica, N. Y. Filed Nov. 29, 1946.

Old Hi's Favorite

The representation of the male figure is fanciful. No claim is made to the words "Old" and "Favorite" apart from the mark as shown.
FOR FISHING RODS AND POLES, FISHING REELS, FISHING LINES, HOOKS, SINKERS, ARTIFICIAL FISH BAIT, FLOATS, BAIT BOXES, LEADERS, FISH NETS, SPINNERS, FISHING SPEARS, FISHING FLIES.
Claims use since Jan. 1, 1945.

Ser. No. 516,647. TEKSUN, INC., West Los Angeles, Calif. Filed Jan. 30, 1947.

TEKSUN TALKIE TOY

The words "Talkie Toy" are disclaimed apart from the mark.
FOR TOY TELEPHONES.
Claims use since June 1946.

Ser. No. 518,074. ELISCU & COMPANY, INC., New York, N. Y. Filed Feb. 25, 1947.

PUDDLES

FOR FLOATABLE TOYS COMPRISING VARIOUS SHAPES—NAMELY, ANIMAL FIGURES, DOLL-LIKE FIGURES, GEOMETRIC FIGURES, AND BOATS.
Claims use since Jan. 20, 1947.

Ser. No. 521,232. ACME MACHINE & FABRICATION CO., Birmingham, Ala. Filed Apr. 24, 1947.

DIXIE FLYER

FOR TOY COASTER WAGONS.
Claims use since June 29, 1946.

Ser. No. 525,679. ALINE MARGARET REISTER, Detroit, Mich. Filed July 2, 1947.

LANNY

FOR DOLLS.
Claims use since Jan. 25, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 491,219. SOMAR SPECIALTY CORP., Bridgeport, Conn. Filed Nov. 7, 1945.

"1001"

FOR TOOL HANDLE HAVING A HOLDING CHUCK TO RECEIVE AND HOLD A KNIFE BLADE, A SCREW DRIVER BLADE, AN AWL, OR OTHER REPLACEABLE TOOL FOR USE IN HANDICRAFT WORK.
Claims use since May 16, 1944.

Ser. No. 514,132. N. R. K. MFG. & ENGINEERING CO., Chicago, Ill., assignor to N. R. K. Mfg. & Engineering Co., Chicago, Ill., a corporation of Illinois. Filed Dec. 12, 1946.

NRK

FOR HAND OPERATED PLASTIC INJECTION MOLDING MACHINES.
Claims use since Sept. 16, 1946.

Ser. No. 517,620. JOHN D. COCHIN, doing business as J. D. Cochin Manufacturing Co., South San Francisco, Calif. Filed Feb. 17, 1947.

Easy

FOR AUTOMOTIVE SERVICE EQUIPMENT—NAMELY, AUTOMOBILE LIFTS OF THE HYDRAULIC AND HYDRAULIC-PNEUMATIC TYPE, AIR COMPRESSORS OF THE CHARACTER USED IN GARAGES AND AUTOMOBILE SERVICE STATIONS.
Claims use since Nov. 1, 1926, on automobile lifts; and since Aug. 15, 1932, on air compressors.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 516,571. PRESSING SUPPLY COMPANY, Philadelphia Pa. Filed Jan. 29, 1947.

PRESCO

FOR IRONING BOARD PADS AND IRONING BOARD PAD COVERS.
Claims use since June 5, 1942.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 481,322. GARRISON MACHINE WORKS, INC., Dayton, Ohio. Filed Mar. 26, 1945.

THERMO-LAB

FOR BOX-LIKE TEMPERATURE CONTROLLED CABINETS WITHIN WHICH THE MANUFACTURE, ASSEMBLY, CALIBRATION, INSPECTION AND TESTING OF PRECISION PARTS, ASSEMBLIES AND APPARATUS MAY BE ACCOMPLISHED.
Claims use since Nov. 16, 1944.

Ser. No. 492,222. RAY-CONTROL COMPANY, Pasadena, Calif. Filed Nov. 26, 1945.

Lestra-Lite

No exclusive rights are claimed in the term "Lite" apart from the mark.
FOR OPTICAL ELEMENTS—NAMELY, LENSES, PRISMS AND TRANSPARENT BODIES HAVING TRANSPARENT, REFLECTION-REDUCING COATINGS AND REFLECTION REDUCING COATINGS FORMED UPON SUCH OPTICAL ELEMENTS AND BODIES.
Claims use since Oct. 15, 1945.

Ser. No. 494,562. KERN & CO. A.-G., Aarau, Switzerland. Filed Jan. 10, 1946.

SWITAR

FOR OBJECTIVE LENSES FOR PHOTOGRAPHIC APPARATUS—NAMELY, STILL CAMERAS AND MOVIE CAMERAS.
Claims use since Jan. 11, 1944.

Ser. No. 512,088. PIGNONS S. A., Ballaigues, Switzerland. Filed Nov. 5, 1946.

ALPA

FOR PHOTOGRAPHIC APPARATUS AND ACCESSORIES—NAMELY, LENSES, FILTERS, SUNSHADES, CABLE RELEASERS, SELF-TIMERS, TRIPODS, VIEWERS, AND FILM CARTRIDGES.
Claims use since May 30, 1942.

Ser. No. 524,736. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed June 24, 1947. Under 10-year proviso.

SHERWIN-WILLIAMS

FOR MEASURING MACHINES AND INSTRUMENTS FOR PAINTS.
Claims use since Dec. 9, 1937.

Ser. No. 525,072. FRANK W. DWYER, doing business as F. W. Dwyer Manufacturing Company, Chicago, Ill., assignor to F. W. Dwyer Mfg. Co., Chicago, Ill., a corporation of Illinois. Filed June 28, 1947.

VISI-DRAFT

The word "Draft" is disclaimed apart from the mark.
FOR DRAFT GAUGES.
Claims use since Aug. 27, 1941.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 523,738. BULOVA WATCH COMPANY, INC., New York, N. Y. Filed June 7, 1947.

American Bride

No claim is made to the exclusive use of the word "American" apart from the mark.
FOR WATCHES, MORE ESPECIALLY WRIST OR STRAP WATCHES.
Claims use since Apr. 2, 1947.

Ser. No. 523,739. BULOVA WATCH COMPANY, INC., New York, N. Y. Filed June 7, 1947.

American Groom

No claim is made to the word "American" apart from the mark.
FOR WATCHES, MORE ESPECIALLY WRIST OR STRAP WATCHES.
Claims use since Apr. 2, 1947.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 496,549. EMPIRE CRAFTS CORPORATION, Newark, N. Y. Filed Feb. 14, 1946.

Nobility Plate

The exclusive use of the word "Plate" is disclaimed apart from the mark as shown.
FOR SILVER PLATED FLAT TABLEWARE.
Claims use since Sept. 30, 1940.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 480,902. GRAY & CO., Minneapolis, Minn. Filed Mar. 14, 1945.

OL' SOFTIE

FOR TANKS FITTED WITH LEAD LINES, VALVES AND FOR THE INDIVIDUAL CONTAINERS FOR CHEMICAL AGENTS WHICH FORM A PART OF AND ARE CONNECTED WITH SUCH TANKS IN A SYSTEM FOR FILTERING AND SOFTENING WATER.
Claims use since Jan. 5, 1945.

Ser. No. 480,903. GRAY & CO., Minneapolis, Minn. Filed Mar. 14, 1945.

SOUR-TEC

The word "Sour" is disclaimed apart from the mark.
FOR ACIDIC COMPOUND FOR SOURING OR NEUTRALIZING ALKALINITY IN LAUNDRY OPERATIONS.
Claims use since Mar. 31, 1944.

Ser. No. 533,096. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

PLURACOL

FOR POLYOXYALKYLENE GLYCOLS OF RELATIVELY HIGHER MOLECULAR WEIGHTS PARTICULARLY USEFUL AS EMULSIFYING, THICKENING, DISPERSING, BINDING, LUBRICATING, AND PLASTICIZING AGENTS.
Claims use since July 1, 1947.

Ser. No. 533,100. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

KLERA-CID

FOR ACIDIC COMPOUND FOR SOURING OR NEUTRALIZING ALKALINITY.
Claims use since Mar. 19, 1946.

Ser. No. 533,103. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

FLAKE K·B·X·

The word "Flake" is disclaimed apart from the mark.
FOR AN ALKALINE COMPOSITION FOR USE IN THE FOOD, BEVERAGE, LAUNDRY, AND TEXTILE INDUSTRIES, AND PARTICULARLY ADAPTED FOR, BUT NOT LIMITED TO, IMPARTING ALKALINITY TO BOTTLING WASHING SOLUTIONS, LAUNDERING SOLUTIONS, AND FOR KIER BOILING.
Claims use since March 1921.

Ser. No. 534,005. DISTILLATION PRODUCTS, INC., Wilmington, Del., and Rochester, N. Y. Filed Sept. 10, 1947.

MYVAX

Applicant claims ownership of registration No. 405,816.
FOR VITAMIN PREPARATIONS SPECIFICALLY SYNTHETICALLY PREPARED CONCENTRATES OF VITAMIN A ACETATE.
Claims use since Sept. 5, 1947.

Ser. No. 534,600. CAMPANA CORPORATION, Batavia, Ill. Filed Sept. 16, 1947.

Magic Touch

FOR FACIAL MAKE-UP PREPARATION.
Claims use since June 26, 1947.

Ser. No. 535,835. DIXIE MEDICINE CO., INC., Morrison, Tenn. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

Dr. Gilbert's

GAS-TRO-MA

L. B. Gilbert, M.D.

The signature "L. B. Gilbert, M. D." is a facsimile signature of a now deceased individual.

FOR LAXATIVE AND STOMACHIC.

Claims use since June 15, 1930.

Ser. No. 536,446. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Oct. 1, 1947.

Applicant claims ownership of registrations Nos. 66,144, 177,189, 174,327, 298,059, 304,824, 377,544, and 201,669.

FOR COSMETIC CREAMS, SHAMPOOS, HAIR PREPARATIONS, DENTIFRICES, GLYCERINE, AND STEARIC ACID.

Claims use since June 1, 1935.

Ser. No. 537,730. S. PFEIFFER MFG. CO., St. Louis, Mo. Filed Oct. 13, 1947. Under section 2f of the act of 1946.

BORO-STIK

No exclusive claim is made to the word "Stik" apart from the mark shown. Applicant claims ownership of registration No. 283,805.

FOR PREPARATION FOR THE RELIEF OF CHAPPED LIPS, COLD SORES AND FEVER SORES.

Claims use since Jan. 1, 1925.

Ser. No. 538,812. THE PURE OIL COMPANY, Chicago, Ill. Filed Oct. 23, 1947.

PURAD

FOR CHEMICAL COMPOUNDS AND SUBSTANCES FOR ADDITION TO MINERAL OIL LUBRICANTS TO IMPROVE THE LUBRICATING PROPERTIES OF SUCH LUBRICANTS.

Claims use since Sept. 24, 1947.

Ser. No. 540,382. FRANK CARBONARO, doing business as Bexatol Vitamin Products, Auburn, N. Y. Filed Nov. 7, 1947.

BEXATOL

FOR PHARMACEUTICAL PREPARATION—NAMELY, VITAMIN "B" COMPLEX CAPSULES.

Claims use since Dec. 2, 1946.

Ser. No. 540,760. AGKEM, INC., Quincy, Ill. Filed Nov. 12, 1947.

FOR INSECTICIDES.

Claims use since 1914.

Ser. No. 541,169. NOREEN, INC., Denver, Colo. Filed Nov. 14, 1947.

Noreen

The words "Super Color Rinse" are disclaimed apart from the mark. Applicant claims ownership of registration No. 359,820.

FOR HAIR COLORING RINSES.

Claims use since Apr. 1, 1938.

Ser. No. 541,520. CROOKES LABORATORIES, INC., New York, N. Y. Filed Nov. 18, 1947.

COLSEDRIN

FOR NASAL DECONGESTANT, CONSISTING OF AN EPHEDRINE-LIKE SUBSTANCE USED TO SHRINK ENGORGED NASAL TISSUE.

Claims use since Feb. 3, 1947.

Ser. No. 542,959. DWAIN S. MARLOW, doing business as Ev-Air Cosmestic Co., Tulsa, Okla. Filed Dec. 2, 1947.

FOR HAIR RINSE.

Claims use since Aug. 27, 1947.

Ser. No. 543,181. HERCULES POWDER COMPANY, Wilmington, Del. Filed Dec. 3, 1947.

No claim is made to the letters "C M C" apart from the mark.

FOR CARBOXYMETHYL CELLULOSE FOR USE AS AN INGREDIENT OF ADHESIVES, THICKENING AGENTS, EMULSION STABILIZERS, DETERGENTS, TEXTILE SIZES AND FINISHES.

Claims use since Nov. 14, 1947.

Ser. No. 543,249. WYETH INCORPORATED, Philadelphia, Pa. Filed Dec. 3, 1947.

PENIFEX

FOR A COMBINED PENICILLIN-SULFATHIAZOLE PREPARATION FOR THERAPEUTICS USE.

Claims use since Oct. 29, 1947.

Ser. No. 547,014. J. C. MENDENHALL MEDICINE CO., INCORPORATED, Mount Vernon, Ind. Filed Jan. 14, 1948. Under section 2f of the act of 1946.

J. C. Mendenhall's

The trade-mark is a facsimile of the signature of Mr. J. C. Mendenhall, deceased.

FOR MALARIA CHILL AND FEVER TONIC AND FOR AN ALTERATIVE LAXATIVE.

Claims use on malaria chill and fever tonic since Sept. 2, 1908; and on an alterative laxative since Mar. 4, 1936.

Ser. No. 550,030. THE DENVER CHEMICAL MANUFACTURING COMPANY, New York, N. Y. Filed Feb. 18, 1948.

A-535

FOR MEDICATED RUB.

Claims use since Feb. 5, 1948.

Ser. No. 554,331. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif. Filed Apr. 10, 1948.

TRIONA

Applicant claims ownership of registration No. 247,540.

FOR INSECTICIDES USED AS GARDEN AND ORCHARD SPRAYS.

Claims use since June 10, 1925.

Ser. No. 554,466. FORREST W. BLEDSOE, doing business as Bledsoe Sanitary Service, Columbus, Ohio. Filed Apr. 13, 1948.

FervO

FOR BACTERIA-PRODUCING MIXTURE FOR USE IN SEPTIC TANKS, TO SPEED THE NATURAL BACTERIAL ACTION THEREOF.

Claims use since Apr. 2, 1948.

Ser. No. 554,582. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Apr. 14, 1948.

SANTOPHOBE

FOR SYNTHETIC RESINS IN SOLUTION FORM FOR USE IN TREATING TEXTILES TO IMPROVE THEIR APPEARANCE AND FEEL AND TO INCREASE THEIR RESISTANCE TO DETERIORATION, WEAR AND SHRINKAGE.

Claims use since Dec. 9, 1947.

CLASS 7

CORDAGE

Ser. No. 549,314. WIRE ROPE MANUFACTURING & EQUIPMENT COMPANY, Seattle, Wash. Filed Feb. 10, 1948.

"The Double Blue Line"

FOR WIRE ROPE.

Claims use since Nov. 15, 1925.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 518,293. HARPER-WYMAN COMPANY, Chicago, Ill. Filed July 5, 1947.

AUT-O-OUT

FOR SMOKERS' ASH TRAYS MADE OF NONPRECIOUS METALS.
Claims use since July 1946.

Ser. No. 541,317. THE J. E. MERGOTT CO., Newark, N. J. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

HOLD-a-PAK

Applicant claims ownership of registration No. 278,262.
FOR CIGARETTE PACKAGE HOLDING-CASE.
Claims use since Oct. 21, 1929.

CLASS 10

FERTILIZERS

Ser. No. 513,200. PEAT MOSS SALES CORPORATION, New York, N. Y. Filed Sept. 29, 1947.

JUSTRITE

FOR PEAT MOSS FOR USE AS HUMUS OR SOIL CONDITIONER.
Claims use since January 1930.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 495,517. SOUTHERN BOX AND LUMBER COMPANY, Wilmington, N. C. Filed Aug. 18, 1947. Under section 2f of the act of 1946.

BAKE-WOOD

Applicant disclaims the word "Wood" apart from the mark.
FOR PLYWOOD.
Claims use since 1935.

Ser. No. 529,919. NATIONAL CHEMICAL & MANUFACTURING COMPANY, Chicago, Ill. Filed July 29, 1947. Under section 2f of the act of 1946.

MARB-L-COTE

FOR COLORED PLASTER.
Claims use since March 1925.

Ser. No. 533,941. ST. PAUL & TACOMA LUMBER CO., Tacoma, Wash. Filed Sept. 9, 1947.

Applicant claims ownership of registration No. 263,784.
FOR LUMBER AND LUMBER PRODUCTS, CONSISTING OF MANUFACTURED FIR, CEDAR, SPRUCE, PINE, AND HEMLOCK, BOTH ROUGH AND FINISHED; SHINGLES; LAMINATED COMPOSITE BOARDS FORMED OF FIBROUS LAYERS BONDED TOGETHER AND HAVING AN OVERLAY FUSED OR OTHERWISE FIRMLY ATTACHED THERETO; PLYWOOD; AND WALLBOARDS.
Claims use since Jan. 1, 1929.

Ser. No. 537,529. WHEELING CORRUGATING COMPANY, Wheeling, W. Va. Filed Oct. 10, 1947.

BAR-X

FOR METAL LATH.
Claims use since January 1930.

Ser. No. 537,943. ERNST SEIDELMANN CORPORATION, New York, N. Y. Filed Oct. 15, 1947.

ERES

Since 1900

FOR ROUGH AND DRESSED LUMBER, WOOD FLOORING, PLYWOOD, VENEER, PRESSED WOOD FIBER BOARDS, PLASTIC AND CERAMIC WALL TILES, AND WALL PANELS COMPOSED OF A WOOD FIBER COMPOSITION WITH AN ENAMEL PAINT COATED FINISH.
Claims use since 1935.

Ser. No. 539,668. DANT & RUSSELL, INC., Portland, Oreg. Filed Oct. 31, 1947.

DANTORE

FOR LIGHTWEIGHT PLASTER AGGREGATE, LIGHTWEIGHT CONCRETE AGGREGATE, ACOUSTICAL PLASTER, HARDWALL PLASTER, AND FINE AND COARSE EXPANDED PERLITE.
Claims use since Aug. 22, 1947.

Ser. No. 541,653. THE DEXTONE COMPANY, New Haven, Conn. Filed Nov. 19, 1947.

Dextolite

Applicant claims ownership of registration No. 285,654.
FOR ARTICLES MADE FROM ARTIFICIAL STONE—NAMELY, SLABS, BLOCKS, PLINTHS, PILASTERS, COLUMNS, ARCHITRAVES, ARCHIVOLTS, FRIEZE MOLDING, COPING, CORNICES, STYLOBATES, BALUSTERS, AND RAILS.
Claims use since Nov. 1, 1947.

Ser. No. 542,038. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 22, 1947.

STAR—TEX

FOR FIREBRICK.
Claims use since Feb. 23, 1944.

Ser. No. 542,042. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 22, 1947.

THOR

FOR FIREBRICK.
Claims use since Jan. 20, 1931.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 527,685. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio, now by change of name Armco Steel Corporation. Filed July 5, 1947.

HEL-COR

Applicant claims ownership of registration No. 381,498.
FOR FERROUS METAL PIPE AND CONDUITS SUITABLE FOR CONVEYING FLUIDS AND LIQUIDS.
Claims use since January 1938.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 510,258. LAKESIDE MALLEABLE CASTINGS COMPANY, Racine, Wis. Filed Sept. 10, 1947.

LAKALLOY

FOR FERROUS CASTINGS.
Claims use since Oct. 25, 1933.

Ser. No. 539,814. THE THOMAS STEEL COMPANY, Warren, Ohio. Filed July 9, 1947. Under section 2f of the act of 1946.

Thomas Strip

Applicant claims ownership of registration No. 430,062.
FOR PLAIN COLD-ROLLED STRIP STEEL, NICKEL-COATED STRIP STEEL, COPPER-COATED STRIP STEEL, BRASS-COATED STRIP STEEL, BRONZE-COATED STRIP STEEL, HOT-DIPPED TIN-COATED STRIP STEEL, SOLDER-COATED STRIP STEEL, AND LACQUER-COATED STRIP STEEL.
Claims use since Nov. 3, 1930.

Ser. No. 547,236. CRUCIBLE STEEL COMPANY OF AMERICA, New York, N. Y. Filed Jan. 16, 1948.

ACCUMET

FOR PRECISION CASTINGS COMPOSED OF STEEL, FERROUS METAL ALLOYS, AND OTHER ALLOYS AND METALS.
Claims use since Oct. 31, 1947.

Ser. No. 547,304. AIR REDUCTION SALES COMPANY, New York, N. Y. Filed Jan. 17, 1948. Under section 2f of the act of 1946.

HI-TEST

Applicant claims ownership of registration No. 382,730.
FOR FLUX-COATED METALLIC WELDING RODS.
Claims use since Aug. 11, 1939.

Ser. No. 547,976. DELAWARE TOOL STEEL CORPORATION, Wilmington, Del. Filed Jan. 26, 1948.

DELSTEEL

FOR BAR TOOL STEEL.
Claims use since 1922.

CLASS 15

OILS AND GREASES

Ser. No. 485,751. CENTRAL PETROLEUM COMPANY, Cleveland, Ohio. Filed Sept. 23, 1947.

CENOLCO

Applicant claims ownership of registration No. 197,329.
FOR LUBRICATING OILS AND GREASES.
Claims use since Oct. 1, 1924.

Ser. No. 527,282. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

PUROLENE

Applicant claims ownership of registrations Nos. 114,113, 178,099, 135,503, 243,822, 252,546, 318,661, 327,384, and 345,995.
FOR LUBRICATING OILS AND GREASES.
Claims use since May 18, 1916.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 488,619. THE SELIG COMPANY, Atlanta, Ga. Filed Aug. 27, 1947. Under section 2f of the act of 1946.

No exclusive claim is made to the words "Quality," "Hygienic," "Sanitary," "Perfection," and "Atlanta" apart from the mark shown in the drawing.
FOR SANITARY FLOOR OIL.
Claims use since Jan. 22, 1915.

Ser. No. 536,146. SEIDLITZ PAINT & VARNISH CO., Kansas City, Mo. Filed Sept. 29, 1947.

Durmolized

FOR PAINTS IN PASTE OR SEMI-PASTE FORM, AND VARNISH.
Claims use since Nov. 1, 1935.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 530,043. ABERCROMBIE & FITCH COMPANY, New York, N. Y. Filed July 31, 1947.

SHIPMATE

FOR SMOKING TOBACCO.
Claims use since June 1946.

Ser. No. 539,752. PENN TOBACCO COMPANY, Wilkes-Barre, Pa. Filed Oct. 31, 1947.

DUCO

FOR SMOKING AND CHEWING TOBACCO.
Claims use since Sept. 9, 1925.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 520,480. TUTTLE & KIEFT, INC., Chicago, Ill. Filed Oct. 1, 1947.

T K

FOR ELECTRICAL HEATING UNITS OF THE RESISTANCE WIRE COIL TYPE, BOTH SHEATHED AND UNSHEATHED, INCLUDING SURFACE AND OVEN HEATING UNITS FOR RANGES, HEATING ELEMENTS FOR WATER HEATERS, FLATIRONS, AND THE LIKE; AND SWITCHES AND MOTOR OPERATED CONTROLS FOR ELECTRICAL HEATING UNITS.
Claims use since Jan. 15, 1947.

Ser. No. 522,896. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947.

PROTECTOLINK

FOR ELECTRICAL CUTOUTS.
Claims use since Feb. 27, 1941.

Ser. No. 527,100. DUKE MANUFACTURING CO., St. Louis, Mo. Filed July 5, 1947.

THURMADUKE

Applicant claims ownership of registrations Nos. 274,575, 275,715, and 369,025.
FOR ELECTRICAL APPARATUS—NAMELY, FOOD WARMERS.
Claims use since Mar. 1, 1942.

Ser. No. 527,214. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

MATTHEWS

Applicant claims ownership of registrations Nos. 233,969, 240,932, 253,114, 253,115, 253,116, 407,390, 408,900, and 409,212.
FOR ELECTRICAL LINE CONSTRUCTION SUPPLIES—NAMELY, FUSE AND SWITCH PULLERS, FUSES, FUSE LINKS, LIGHTNING GAPS AND ARRESTORS, PARTS FOR FUSES, PARTS FOR SWITCHES, EARTH ANCHORS, WIRE CLIPS, WIRE CONNECTORS, GUY GUARDS, SPLICING JOINTS, ELECTRICAL FAULT DETECTORS FOR INDICATING ELECTRICAL FAULT CONDITIONS IN ELECTRICAL SYSTEMS, CABLE CLAMPS, LIVE LINE CLAMPS, ACCESSORIES FOR FUSES AND SWITCHES—NAMELY, SWITCH BLADES AND SUPPORTING BRACKETS, ELECTRIC LAMP GUARDS, FUSE CUTOUTS, ELECTRICAL SWITCHES, FUSED SWITCHES, AND ELECTRICAL RELAYS.
Claims use since about January 1905 by applicant's predecessor in title on fuse and switch pullers, fuse links, parts for fuses, parts for switches, earth anchors, splicing joints, electrical fault detectors, cable clamps, accessories for fuses and switches, electric lamp guards, fuse cutouts, electrical switches, fused switches and fuses; since September 1929 on wire connectors; since about February 1931 on guy guards; since about April 1933 on wire clips; since about October 1935 on live line clamps; since about May 1936 on lightning gaps and arrestors; and since Feb. 21, 1947, on electrical relays.

Ser. No. 528,936. MAGUIRE INDUSTRIES, INCORPORATED, New York, N. Y., and Chicago, Ill. Filed July 19, 1947.

C. H. T.

FOR ELECTRIC TRANSFORMERS.
Claims use since Oct. 19, 1937.

Ser. No. 530,203. INTER-COMMUNICATION SYSTEM OF AMERICA, INC., Chicago, Ill. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

FLASH A CALL

Applicant claims ownership of registration No. 375,962.
FOR WIRED AND WIRELESS TWO-WAY ELECTRICAL LOUDSPEAKER OFFICE AND LIKE INTERCOMMUNICATING SYSTEMS, ELECTRICAL PUBLIC ADDRESS APPARATUS AND AMPLIFIERS THEREFOR, AND PARTS THEREFOR.
Claims use since Nov. 1, 1937.

Ser. No. 530,890. ACME ELECTRIC CORPORATION, Cuba, N. Y. Filed Aug. 9, 1947.

VOLTROL

FOR VOLTAGE REGULATORS AND VARIABLE VOLTAGE TRANSFORMERS.
Claims use since August 1935.

Ser. No. 533,410. SIGNAL ELECTRIC MANUFACTURING CO., Menominee, Mich. Filed Sept. 4, 1947.

COOL SPOT

Applicant disclaims the word "Cool" apart from the mark.
FOR ELECTRIC AIR CIRCULATING FANS.
Claims use since January 1922.

Ser. No. 533,519. AMPLIFIER CORP. OF AMERICA, New York, N. Y. Filed Sept. 5, 1947.

MAGNEMATIC

FOR MAGNETIC SOUND RECORDING AND REPRODUCING APPARATUS AND PARTS THEREOF.
Claims use since Aug. 1, 1947.

Ser. No. 535,190. SMOOT-HOLMAN COMPANY, Inglewood, Calif. Filed Sept. 20, 1947. Under section 2f of the act of 1946.

FOR FLOOD LIGHTING EQUIPMENT, MERCURY INDUSTRIAL LIGHTING FIXTURES, FLUORESCENT LIGHTING FIXTURES, INDUSTRIAL AND COMMERCIAL; AND INCANDESCENT LIGHTING FIXTURES, INDUSTRIAL AND COMMERCIAL.
Claims use since Dec. 20, 1921.

Ser. No. 537,810. MODERN HYGIENE CORPORATION, Boston, Mass. Filed Oct. 14, 1947. Under section 2f of the act of 1946.

Modern Hygiene

Applicant claims ownership of registration No. 430,678.
FOR ELECTRIC VACUUM CLEANERS.
Claims use since Apr. 4, 1939.

Ser. No. 538,058. WEBSTER ELECTRIC COMPANY, Racine, Wis. Filed Oct. 16, 1947.

Telespatch

FOR INTER-COMMUNICATING SOUND AMPLIFYING AND TRANSMITTING SYSTEMS COMPRISING SPEAKERS, AMPLIFIERS, MICROPHONES, INTERCONNECTING CIRCUITS, AND ENERGIZING DEVICES WHEREBY CONVERSATION AT EITHER POINT MAY BE HEARD AT THE OTHER POINT OF COMMUNICATION.
Claims use since Aug. 15, 1947.

Ser. No. 538,676. TRIMM, INC., Libertyville, Ill. Filed Oct. 22, 1947. Under section 2f of the act of 1946.

TRIMM

Applicant claims ownership of registration No. 207,213.
FOR RADIO AND TELEPHONE HEADSETS AND EARPHONES, AND GROUP HEARING AIDS, FOR THEATRES, CHURCHES, AND SIMILAR USE.
Claims use since May 1922 on radio and telephone headsets and earphones; and since 1932 on individual and group hearing aids.

Ser. No. 538,731. DORAY LAMP CO., INC., Chicago, Ill. Filed Oct. 23, 1947. Under section 2f of the act of 1946.

Do-Ray

Applicant claims ownershp of registration No. 241,443.
FOR MOTOR VEHICLE ACCESSORIES, AS FOLLOWS: ELECTRICAL VEHICLE LAMPS—NAMELY, SPOTLIGHTS, STOP LIGHTS, ROAD LIGHTS, SEARCHLIGHTS, ELECTRIC FLARES, ELECTRIC CLEARANCE LAMPS, DIRECTIONAL SIGNALS, FOG LIGHTS AND BACK-UP LIGHTS.
Claims use since July 1, 1925.

Ser. No. 539,178. LAHER SPRING AND TIRE CORPORATION, Oakland, Calif. Filed Oct. 27, 1947.

The words "Laher" and "The Battery With 9 Lives" are disclaimed apart from the mark. Applicant claims ownership of registration No. 426,224.
FOR AUTOMOBILE BATTERIES.
Claims use since Oct. 3, 1947.

Ser. No. 540,304. JOHN MUTO, doing business as Luma-Nite Sales Products, Chicago, Ill., assignor to Joseph Focosi. Filed Nov. 6, 1947.

LUMA-NITE

FOR MAGNETICALLY ATTACHABLE ELECTRIC TROUBLE LIGHTS FOR VEHICLES.
Claims use since May 21, 1947.

Ser. No. 540,561. OAKES & COMPANY, Chicago, Ill. Filed Nov. 8, 1947.

Style Craft

The word "Style" is disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 432,831.
FOR RADIO RECEIVING SETS AND PARTS THEREOF.
Claims use since Feb. 1, 1946.

Ser. No. 542,853. G. H. LELAND, INC., Dayton, Ohio. Filed Dec. 1, 1947.

LEDEX

FOR ELECTRICAL DEVICES—NAMELY, SOLENOIDS, RECTIFIERS AND SELECTOR SWITCHES.
Claims use since Oct. 11, 1945.

Ser. No. 542,981. THE WARD PRODUCTS CORPORATION, Cleveland, Ohio. Filed Dec. 2, 1947.

EIGHT BALL

FOR RADIO ANTENNA.
Claims use since Mar. 1, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 517,836. THE CRIB-DERBY CO., St. Paul, Minn. Filed Jan. 19, 1948.

CRIB-DERBY

FOR CRIBBAGE BOARDS.
Claims use since Sept. 1, 1941.

Ser. No. 527,069. B. F. GLADDING & CO. INC., South Otselic, N. Y. Filed July 5, 1947.

BLUE RIBBON

Applicant claims ownership of registration No. 153,182.
FOR FISHING LINES.
Claims use since Apr. 25, 1913.

Ser. No. 528,415. ARMOUR AND COMPANY, Chicago, Ill. Filed July 12, 1947.

XXX TROPICAL

FOR STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS.
Claims use since 1917.

Ser. No. 529,393. EUGENE B. LASKIN, doing business as Laskin Manufacturing Company, Baltimore, Md. Filed July 24, 1947.

CIRCLE 30

FOR TOY MINIATURE GAS ENGINES FOR MODEL AIRCRAFT, FOR BOATS, OR OTHER MODEL VEHICLES.
Claims use since June 10, 1947.

Ser. No. 529,529. C. G. CONN LTD., Elkhart, Ind. Filed July 18, 1947.

The representation of a fish is disclaimed apart from the mark shown.
FOR FISHING-TACKLE BOXES.
Claims use since May 13, 1926.

Ser. No. 530,477. DOWST MANUFACTURING COMPANY, Chicago, Ill. Filed Aug. 5, 1947.

TOOTSIETOY

Applicant claims ownership of registrations Nos. 365,092 and 181,033.
FOR MINIATURE TOYS—NAMELY, AUTOMOBILES, TRUCKS, TRACTORS, AEROPLANES, BOATS, SUBMARINES, ZEPPELINS, TRAINS, CANNONS, DISHES, DOLL-HOUSES, BADGES, WHISTLES, CHILDREN'S BASKETBALLS, GUNS, PISTOLS, TELEPHONES, FIRE-ENGINES, DERRICKS, LADDERS, SCALES, BATH-ROOM FIXTURES, FORTUNE-TELLING SETS, LIVING-ROOM SUITES, BEDROOM SUITES, DINING-ROOM SETS, ROCKERS, CHAIRS, DAVENPORTS, DESKS, DRESSERS, TABLES, BEDS, TEA CARTS, AND OTHER TOY FURNITURE.
Claims use since Apr. 20, 1921.

Ser. No. 530,978. SPORT PRODUCTS, INC., Cincinnati, Ohio. Filed Aug. 9, 1947. Under section 2f of the act of 1946.

MacGregor

Applicant claims ownership of registrations Nos. 137,977 (renewed), 167,065 (renewed), 188,982 (renewed), 296,406, 383,913, 385,253, and 402,549.
FOR TENNIS RACKETS.
Claims use since Jan. 1, 1938.

Ser. No. 531,071. WRIGHT & MCGILL CO., Denver, Colo. Filed Aug. 11, 1947.

EAGLE CLAW HOOKS

The word "Hooks" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 279,747 and 370,137.
FOR FISH HOOKS AND ARTIFICIAL FISH LURES.
Claims use since Sept. 27, 1927.

Ser. No. 531,917. THEODORE R. KEITH, Nutley, N. J. Filed Aug. 20, 1947.

"Double Trouble"

FOR BOARD GAME PLAYED WITH MARBLES.
Claims use since July 19, 1947.

Ser. No. 534,023. THE DAVID J. JOSEPH COMPANY, Cincinnati, Ohio. Filed Sept. 10, 1947.

SURFACE DOODLER

The word "Surface" is disclaimed apart from the mark.
FOR FISHING LURES.
Claims use since Aug. 8, 1946.

Ser. No. 535,323. IDEAL NOVELTY & TOY CO., Hollis, N. Y. Filed Sept. 23, 1947.

"Miracle Skin"

FOR DOLLS.
Claims use since June 30, 1947.

Ser. No. 541,408. GEORGE S. COX, doing business as Geo. S. Cox Mfg. Co., St. Louis, Mo. Filed Nov. 17, 1947.

YUGA

FOR GAME BOARDS.
Claims use since Oct. 6, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 526,553. PINE TREE MILKING MACHINE CO., Chicago, Ill. Filed July 5, 1947.

The Cow's Adopted Child

Applicant claims ownership of registration No. 125,500.
FOR MILKING MACHINES AND PARTS THEREOF.
Claims use since Oct. 8, 1918.

Ser. No. 527,877. ROBERT H. CLARK, doing business as Robert H. Clark Company, Beverly Hills, Calif. Filed July 5, 1947.

FOR HAND MANIPULABLE CAN OPENERS.
Claims use since Dec. 7, 1946.

Ser. No. 530,511. INNIS, SPEIDEN & CO., New York and Niagara Falls, N. Y. Filed Aug. 5, 1947.

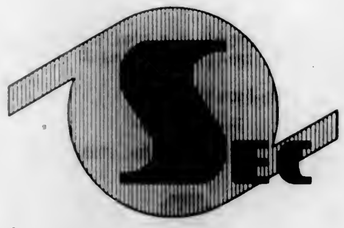
LARVAJECTOR

FOR PORTABLE HAND AND WHEEL MOUNTED POWER OPERATED MACHINES FOR SUB-SOIL FUMIGATION COMPRISING A HAND PLUNGER UNIT OR POWER OPERATED PUMP TO FEED FUMIGANT INTO THE GROUND AT A PRE-SET DEPTH.
Claims use since 1937.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 529,361. CHICAGO ELECTRIC MANUFACTURING COMPANY, Chicago, Ill. Filed July 24, 1947.



The drawing is lined for red and blue.
FOR PORTABLE LAUNDRY WRINGERS.
Claims use since 1939.

Ser. No. 529,364. CHICAGO ELECTRIC MANUFACTURING COMPANY, Chicago, Ill. Filed July 24, 1947.

Little Magic

FOR PORTABLE LAUNDRY WRINGERS.
Claims use since 1939.

Ser. No. 538,466. STAR EQUIPMENT CORPORATION, Bloomfield, N. J. Filed Oct. 20, 1947.

The drawing is lined to indicate the color red.
FOR DRY-CLEANING MACHINES.
Claims use since September 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 495,853. WOLLENSAK OPTICAL COMPANY, Rochester, N. Y. Filed July 30, 1947.

MICRONAR

FOR PHOTOGRAPHIC LENSES.
Claims use since Dec. 14, 1945.

Ser. No. 507,981. GISHOLT MACHINE COMPANY, Madison, Wis. Filed July 15, 1947.

GISHOLT

FOR MACHINES FOR LOCATING AND MEASURING UNBALANCE IN ROTATING PARTS AND BODIES AND FOR THE ADDITION OF WEIGHTS OR REMOVAL OF MATERIAL TO CORRECT THE DETERMINED UNBALANCE AND ELIMINATE VIBRATION.
Claims use since Jan. 1, 1899.

Ser. No. 507,982. GISHOLT MACHINE COMPANY, Madison, Wis. Filed July 15, 1947.

FOR MACHINES FOR LOCATING AND MEASURING UNBALANCE IN ROTATING PARTS AND BODIES, AND FOR THE ADDITION OF WEIGHTS OR REMOVAL OF MATERIAL TO CORRECT THE DETERMINED UNBALANCE AND ELIMINATE VIBRATION.
Claims use since November 1905.

Ser. No. 514,133. THE PENNZOIL COMPANY, Oil City, Pa. Filed July 28, 1947.

FOLLOMATIC

FOR ELECTRICALLY OPERATED TIME CONTROLLED FOLLOW-UP CARD HOLDING AND DESIGNATING MACHINES.
Claims use since Oct. 4, 1946.

Ser. No. 521,820. PERFECT CIRCLE CORPORATION, Hagerstown, Ind. Filed Sept. 24, 1947.

Plastigage

Applicant claims ownership of registrations Nos. 395,407 and 404,379.
FOR PLASTIC GAUGING MATERIAL IN THE FORM OF STICKS TO BE SQUEEZED BETWEEN A BEARING AND A SHAFT FOR USE IN DETERMINING THE CLEARANCE OF THE SAME BY MEASUREMENT ON A CALIBRATED SCALE.
Claims use since Mar. 6, 1947.

Ser. No. 529,696. THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio. Filed July 26, 1947. Under section 2f of the act of 1946.

TILTVIEW

FOR LIQUID LEVEL GAUGES AND INDICATORS, PARTS AND FITTINGS THEREOF.
Claims use since June 7, 1929.

Ser. No. 541,785. ROCK-OLA MANUFACTURING CORPORATION, Chicago, Ill. Filed July 31, 1947.

FEATURISTIC

Reg. No. 428,765. Registered Apr. 1, 1947. THE C. B. DOLGE COMPANY, Westport, Conn., a corporation of Connecticut. Republished by registrant.

PERMAX

FOR INSECTICIDES.
Claims use since Oct. 1, 1945.

Reg. No. 431,879. Registered Aug. 12, 1947. DELL ALVOS, Guadalupe, Calif. Republished by registrant.

SULTECH

FOR SULPHUR DIOXIDE.
Claims use since June 1940.

CLASS 7
CORDAGE

Reg. No. 257,243. Registered June 4, 1929. HAZARD WIRE ROPE COMPANY, Wilkes-Barre, Pa. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

The words "Wire Rope" are disclaimed apart from the mark as shown.
FOR WIRE ROPE.
Claims use since Aug. 20, 1928.

Reg. No. 288,611. Registered Nov. 3, 1931. JANUARY AND WOOD COMPANY, Maysville, Ky., a corporation of Kentucky. Republished by registrant.

HOME-TIES

FOR COTTON TWINE AND CORD.
Claims use since Nov. 15, 1929.

Reg. No. 397,136. Registered Aug. 18, 1942. AMERICAN CHAIN & CABLE COMPANY, INC., Bridgeport, Conn., a corporation of New York. Republished by registrant.

CRESCENT

FOR STRANDED METAL WIRE ROPE AND WIRE CABLE FOR MECHANICAL (NON-ELECTRICAL) PURPOSES.
Claims use since Jan. 5, 1915.

Reg. No. 421,787. Registered June 18, 1946. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

ACCO-LOC

The word "Loc" is disclaimed apart from the mark as shown.
FOR LENGTHS OF WIRE ROPE PROVIDED WITH SPLICED EYES.
Claims use since Sept. 7, 1945.

CLASS 10
FERTILIZERS

Reg. No. 66,941. Registered Jan. 7, 1908. VIRGINIA-CAROLINA CHEMICAL COMPANY, Jersey City, N. J., Richmond and Norfolk, Va., and elsewhere. Republished by Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia.

GOOD LUCK

FOR FERTILIZERS.
Claims use since prior to 1898.

Reg. No. 408,834. Registered Aug. 29, 1944. FIDELITY CHEMICAL CORPORATION, Houston, Tex., a corporation of Texas. Republished by registrant.

FIDELITY

FOR FERTILIZERS.
Claims use since on or about Jan. 1, 1906.

CLASS 11
INKS AND INKING MATERIALS

Reg. No. 419,307. Registered Feb. 12, 1946. WITCO CHEMICAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FERROX

FOR HYDRATED YELLOW IRON OXIDE USED AS A PIGMENT IN INKS.
Claims use since January 1930.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 283,092. Registered May 19, 1931. STREATOR BRICK COMPANY, Streator, Ill., a corporation of Illinois. Republished by registrant.

Clatex

FOR FACE BRICK.
Claims use since Dec. 11, 1930.

Reg. No. 293,053. Registered Apr. 5, 1932. WESTERN BRICK COMPANY, Danville, Ill., a corporation of Illinois. Republished by registrant.

Mossblende

FOR BRICKS.
Claims use since Oct. 9, 1929.

Reg. No. 296,540. Registered Aug. 9, 1932. WESTERN BRICK COMPANY, Danville, Ill., a corporation of Illinois. Republished by registrant.

WESTMOLD

FOR BRICKS.
Claims use since Mar. 7, 1932.

Reg. No. 362,802. Registered Nov. 29, 1938. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

HIAC

FOR SUPERDUTY FIRE CLAY BRICKS.
Claims use since January 1936.

Reg. No. 362,803. Registered Nov. 29, 1938. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KAOCEMENT

FOR KAOLIN BASE REFRACTORY BONDING MORTAR.
Claims use since about 1925.

Reg. No. 381,176. Registered Sept. 17, 1940. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

GRCO DRIP POINT

The words "Drip Point" are disclaimed apart from the mark as shown.
FOR SPECIALLY DESIGNED ACID-PROOF BRICK.
Claims use since Feb. 15, 1938.

Reg. No. 411,668. Registered Jan. 30, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ACIDO

FOR STANDARD AND SPECIAL SHAPES OF BRICK AND TILE.
Claims use since June 25, 1925.

Reg. No. 411,669. Registered Jan. 30, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

RIDGE

FOR STANDARD REFRACTORY BRICKS.
Claims use since 1878.

Reg. No. 411,670. Registered Jan. 30, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

SEMALU

FOR STANDARD REFRACTORY BRICKS.
Claims use since January 1929.

Reg. No. 412,099. Registered Feb. 20, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

PRCO

FOR STANDARD REFRACTORY BRICKS.
Claims use since 1933.

Reg. No. 412,235. Registered Feb. 27, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR STANDARD REFRACTORY BRICKS.
Claims use since June 1916.

Reg. No. 413,145. Registered Apr. 10, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR BLOCK AND PLASTIC HEATING INSULATION.
Claims use since November 1941.

Reg. No. 414,717. Registered June 26, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

REX

FOR STANDARD REFRACTORY BRICKS.
Claims use since Mar. 31, 1939.

Reg. No. 415,303. Registered Aug. 7, 1945. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ST. LOUIS

FOR STANDARD REFRACTORY BRICKS.
Claims use since 1889.

Reg. No. 422,618. Registered Aug. 6, 1946. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

RANGER

FOR STANDARD REFRACTORY BRICKS.
Claims use since October 1929.

Reg. No. 426,640. Registered Jan. 7, 1947. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FERROCLIP

FOR UNBURNED SUSPENDED ARCH AND WALL BRICKS.
Claims use since Aug. 17, 1944.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 136,551. Registered Nov. 2, 1920. THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR METAL PLUGS FOR DRY OIL AND GAS WELLS, METAL PIPE, PIPE-COUPLINGS, PIPE-REDUCERS, PIPE-UNIONS, PIPE-ELBOWS, PIPE-T's, PIPE-CROSSES, PIPE-CAPS, AND PIPE-NIPPLES, PLUGS FOR STOPPING THE ENDS OF PIPES, PRESSURE-REGULATORS FOR FLUIDS, NUTS, BOLTS, TURNBUCKLES, SCREWS, RIVETS, METAL WASHERS, COCKS AND FAUCETS, PIPE HANGERS AND SADDLES, VALVES, GAS-BRACKETS, HOSE COUPLINGS AND CLAMPS, HOSE-TIPS, HINGES, SPROCKET-CHAINS, AND CHAIN CABLES.

"ALUMALOY"

FOR TURNBUCKLES.
Claims use since Mar. 6, 1945.

Reg. No. 420,360. Registered Apr. 9, 1946. THE H. M. HARPER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EVERLASTING FASTENINGS

The word "Fastenings" is disclaimed apart from the mark as shown.
FOR THREADED BOLTS, NUTS, SCREWS, METAL WASHERS, RIVETS, COTTER PINS AND THREADED HOOKS AND EYES.
Claims use since June 11, 1943.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 121,642. Registered May 14, 1918. THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

N.S.CO

FOR METAL BALLS FOR PLUGGING DRY WELLS, BABBITT METAL, SOLDER, PIG-LEAD, SHEET-LEAD, TOOL-STEEL, WIRE, METAL IN THE FORM OF RODS AND BARS, AND ANVILS.
Claims use since 1900.

Reg. No. 233,787. Registered Oct. 11, 1927. HEPPENSTALL FORGE & KNIFE COMPANY, Pittsburgh, Pa. Republished by Heppenstall Company, Pittsburgh, Pa., a corporation of Pennsylvania, by change of name.

OILTEM

FOR STEEL FORGINGS.
Claims use since Feb. 1, 1927.

Reg. No. 288,450. Registered Oct. 27, 1931. PAGE STEEL AND WIRE COMPANY, Adrian, Mich., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

PAGE

FOR STEEL AND IRON RODS, STEEL AND IRON WIRE, STEEL AND IRON SINGLE WIRE STRAND, WELDING FILLER METAL AND WIRE METAL PRODUCTS—NAMELY, SPRING WIRE, HIGH AND LOW CARBON WIRE AND WIRE ROD.
Claims use since July 1, 1883.

Reg. No. 299,940. Registered Jan. 3, 1933. DETROIT STOKER COMPANY, Monroe and Detroit, Mich., a corporation of Michigan. Republished by registrant.

DSC

FOR STOKER CASTINGS AND FORGINGS IN THE ROUGH.
Claims use since about Mar. 1, 1932.

Reg. No. 348,701. Registered Aug. 3, 1937. COPPER RANGE COMPANY, Painesdale, Mich., a corporation of Michigan. Republished by registrant.

C.G.HUSSEY & CO.

FOR COPPER SHEET, COPPER IN ROLLS, COPPER WIRE, COPPER ANODES, BRASS SHEET, AND BRASS WIRE.
Claims use since 1848.

Reg. No. 354,873. Registered Mar. 1, 1938. SHARON STEEL CORPORATION, Sharon, Pa., a corporation of Pennsylvania. Republished by registrant.

SHARONSTEEL

The word "Sharonsteel" is disclaimed apart from the mark as shown.
FOR HOT ROLLED STRIP STEEL, COLD ROLLED STRIP STEEL, HOT ROLLED STAINLESS STRIP STEEL, COLD ROLLED STAINLESS STRIP STEEL, HOOP AND BAND STEEL, SHEET STEEL, GALVANIZED STEEL AND TERNE COATED STEEL.
Claims use since May 1936.

CLASS 15

OILS AND GREASES

Reg. No. 226,059. Registered Mar. 29, 1927. BURGER-ADAMS PETROLEUM COMPANY, Coffeyville, Kans. Republished by The American Oil Corporation. Coffeyville, Kans., a corporation of Kansas.

Marvelene

FOR LUBRICATING OILS AND GREASES.
Claims use since Nov. 1, 1923.

Reg. No. 233,573. Registered Oct. 4, 1927. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

McCORMICK-DEERING

FOR LUBRICATING OIL.
Claims use since May 1, 1926.

Reg. No. 283,566. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

DECTOL

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,567. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

INCA

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,568. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

LIPAN

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,689. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

COGLUBE

FOR LUBRICATING GREASE.
Claims use since Aug. 27, 1930.

Reg. No. 283,690. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

CASCO

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,691. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

CADDO

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,692. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

AZTEC

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since July 1935.

Reg. No. 354,060. Registered Feb. 1, 1938. GORDON-O'NEILL CO., INC., New York, N. Y. Republished by Gordon-O'Neill Company, Jersey City, N. J., a firm.

BALTIMORE CLUB

B&C

FOR WHISKEY.
Claims use since 1868.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 358,386. Registered July 12, 1938. COLD SPRING GRANITE COMPANY, Cold Spring, Minn., a corporation of Minnesota. Republished by registrant.

DIAMOND GRAY

The word "Gray" is disclaimed apart from the mark as shown.
FOR CEMETERY MONUMENTS, HEADSTONES, GRAVE MARKERS, AND GRANITE MEMORIALS.
Claims use since Jan. 1, 1935.

Reg. No. 360,240. Registered Sept. 13, 1938. COLD SPRING GRANITE COMPANY, Cold Spring, Minn., a corporation of Minnesota. Republished by registrant.

DIAMOND PINK

The word "Pink" is disclaimed apart from the mark as shown.
FOR STONE MONUMENTS, MARKERS, TABLETS, TOMBSTONES, MAUSOLEUMS, AND MEMORIALS.
Claims use since June 28, 1937.

Reg. No. 361,400. Registered Oct. 18, 1938. COLD SPRING GRANITE COMPANY, Cold Spring, Minn., a corporation of Minnesota. Republished by registrant.

RAINBOW

FOR STONE MONUMENTS, MARKERS, TABLETS, TOMBSTONES, MAUSOLEUMS, AND MEMORIALS.
Claims use since July 1, 1925.

Reg. No. 404,871. Registered Dec. 28, 1943. COLD SPRING GRANITE COMPANY, Cold Spring, Minn., a corporation of Minnesota. Republished by registrant.

The RAINBOW LINE

The drawing is lined for the colors red, orange, yellow, green, blue, and violet.
FOR STONE MONUMENTS, MARKERS, TABLETS, TOMBSTONES, MAUSOLEUMS AND MEMORIALS.
Claims use since July 1, 1942.

REISSUES

SEPTEMBER 7, 1948

23,037

SPOTTING PASTE

Leon Adler, St. Louis, Mo.

No Drawing. Original No. 2,396,667, dated March 19, 1946, Serial No. 406,438, August 11, 1941. Application for reissue May 17, 1946, Serial No. 670,335

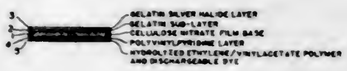
2 Claims. (Cl. 106—272)

1. A testing paste composition for use with a master standard piece to visibly indicate places of contour deviation of a work piece therefrom, said paste being non-hardening, non-drying and non-volatile and consisting of paraffine wax modified with a substantially non-volatile pasty petrolatum and constituting the dominant ingredients, and a small amount of a dissolved dye to color the paste throughout.

PATENTS

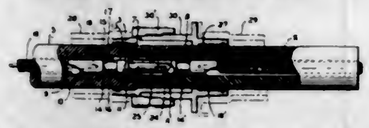
GRANTED SEPTEMBER 7, 1948

2,448,506
PRODUCTION OF ITACONIC ACID
Joseph A. Ambler, New Orleans, La., and Alfred Laurence Curl, Winter Haven, Fla., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 10, 1946. Serial No. 696,020
5 Claims. (Cl. 260—537)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process comprising partially neutralizing an aqueous solution of aconitic acid with a basic inorganic compound to give a resulting pH of the solution from 1 to 4, and heating the resulting solution to decompose the aconitic acid into itaconic acid and carbon dioxide.

2,448,507
PHOTOGRAPHIC ELEMENTS HAVING ANTIHALATION LAYER COMPOSED OF VINYLPYRIDINE POLYMER WITH VINYLPYRIDINE POLYMER SUBLAYER AND OUTER PROTECTIVE LAYER
Francis Peter Alles, North Plainfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application August 1, 1946, Serial No. 687,709
5 Claims. (Cl. 95—9)



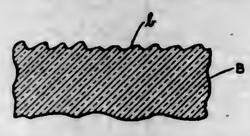
1. A photographic element comprising a support which transmits actinic light, a light-sensitive colloid silver halide emulsion layer on one surface of said support and on the other surface of said support, in order, a clear layer composed of a water-insoluble vinylpyridine polymer which is soluble in 1% aqueous acetic acid, an antihalation layer composed of such a vinylpyridine polymer which is soluble in 1% aqueous acetic acid and contains an antihalation material, and an antiabrasion layer composed of a water-soluble film-forming material.

2,448,508
PHOTOGRAPHIC ELEMENTS HAVING A SILVER HALIDE LAYER AND AN ANTIHALATION LAYER ON A POLYVINYLPYRIDINE LAYER
Francis Peter Alles, North Plainfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application April 5, 1947, Serial No. 739,645
3 Claims. (Cl. 95—9)

1. A photographic element comprising a support which transmits light rays, a light-sensitive silver halide emulsion layer on one side of the support, a sublayer on the opposite side of the support consisting of a water-insoluble vinylpyridine polymer which is soluble in 1% aqueous acetic acid which carries a water-permeable colloid layer containing a dischargeable dye which absorbs light of wave lengths to which the emulsion is sensitive.

2,448,509
ELECTRICAL CONNECTOR
Charles Antony, Jr., Baldwin, and David Mannheimer, Hempstead, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application May 14, 1943, Serial No. 487,048
5 Claims. (Cl. 173—328)

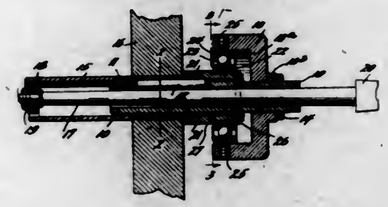
1. An electrical connector comprising, tapered recessed male and female insulating portions connected together along a long tapered surface, male and female contact members mounted within the recesses of said male and female portions near the low side of said surface, respectively, and spring means mounted on said contact members and engaging in said recessed portions for removably retaining said contact members in place, said spring means having bowed central portions for releasably engaging said recessed portions and said spring means central portions being yieldable upon application of predetermined pulls upon said contact members to effect the disengaging of said spring means from said male and female portions and the release of said contact members therefrom.



2,448,510
CHLORINATION OF STARCH AND PRODUCTS THEREOF
Harold Nathan Barham, Manhattan, Kans., assignor to Sharples Chemicals Inc., Philadelphia, Pa., a corporation of Delaware
No Drawing. Application February 20, 1945, Serial No. 578,957
28 Claims. (Cl. 260—209)

1. In the chlorination of starch, the process comprising maintaining the starch immersed in liquid chlorine maintained under super-atmospheric pressure until chemical combination between the starch and chlorine has occurred, said chemical combination resulting in the evolution of hydrogen chloride, and maintaining in the sphere of reaction a molecular ratio of chlorine to hydrogen chloride of at least approximately 6 to 1 during any stage of said chlorination when the degree of chlorination of said starch is less than 18%.

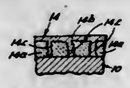
2,448,511
GLOSSING CORUNDUM AND SPINEL
Malcolm H. Barnes and Edward L. McCandless, Kenmore, N. Y., assignors to The Linde Air Products Company, a corporation of Ohio
Application October 1, 1943, Serial No. 504,544
14 Claims. (Cl. 117—121)



1. A process for glossing a unicrystalline body of material selected from the group consisting

of corundum and spinel comprising applying to a rough surface of such a body in thin film of at least one substance selected from the group consisting of metal oxides and substances forming metal oxides fulfilling at least one of the

following requirements: having a melting point lower than such material forming a eutectic with such material, forming a low melting peritectic with such material, and forming a solid solution with such material; and subsequently heat bonding such film to said surface.



2,448,512
TUBE EXPANDER
Newell Brackett, Bala Cynwyd, Pa.
Application January 8, 1947, Serial No. 720,780
4 Claims. (Cl. 153—82)

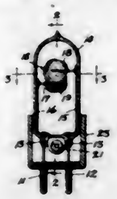
1. A tube expanding tool comprising a roller cage, a plurality of expanding rollers rotatably mounted in said cage, a tapered mandrel extending through said cage for rotation therewith and longitudinal movement therein for moving said rollers radially outwardly, a housing mounted on said cage for rotation therewith and longitudinal adjustment therealong, said housing having a cylindrical recess in its forward end, a stop collar rotatably mounted in said housing recess and movable longitudinally with said housing when the housing is adjusted on the cage, said stop collar extending forwardly out of said housing recess for engagement with the end of a tube being expanded to limit the distance said cage and rollers may enter said tube and to cease rotation of the collar upon engagement with said tube to protect the tube against wear during continued rotation of said cage and housing, said stop collar overhanging said expanding rollers so that the inner surface of the collar engages and limits the outward radial movement of said rollers to prevent overexpansion of said tube and to tactually signal the operator when the expanding operation has been completed.

2,448,513
ELECTROSTATIC CONDENSER PLATE
Joseph B. Brennan, Bratenahl, and Leona Marsh Conrad, Cleveland, Ohio; said Conrad assignor to said Brennan
Application November 26, 1942, Serial No. 467,044
1 Claim. (Cl. 204—38)

A plate for an electrostatic condenser comprising a piece of aluminum having a coating of a compound containing aluminum and oxygen thereon, said coating being porous and absorbent and presenting a flat, substantially white, nonmetallic appearance before impregnation, and being produced by subjecting the aluminum to electrolysis in an aqueous solution of a film forming material and a potential condensation prod-

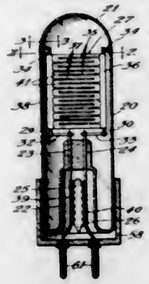
uct of urea and formaldehyde at such a voltage that sparking takes place on the surface of the metal, said coating being impregnated with a dielectric material which fills the pores of the coating and penetrates substantially to the underlying metal and is thereby keyed to the metal.

2,448,514
HEAT-TREATING MACHINE
William F. Butler, Hillside, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application March 24, 1945, Serial No. 584,549
4 Claims. (Cl. 34—113)



1. A machine for heat treating flexible sheet material, comprising a plurality of horizontally spaced hollow rotatable rolls having cylindrical heat conducting surfaces substantially tangentially engageable at their upper portions only with the moving sheet material, magnetic means on the interior of each of said rolls for holding the sheet material against the upper surfaces of the rolls, means for supporting and rotating the rolls with their sheet engaging surfaces relatively vertically spaced transversely to the direction of travel of the sheets to define an undulatory path of sheet travel so as to flex the moving sheet material, and means for imparting a predetermined temperature to the heat conducting surfaces of said rolls.

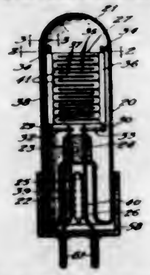
2,448,515
DYED CELLULOSE ETHERS AND DYEING OF FABRICS THEREWITH
William B. Carroll, Jr., Schoolfield, Va., assignor to Dan River Mills, Incorporated, a corporation of Virginia
No Drawing. Application September 5, 1947, Serial No. 772,459
9 Claims. (Cl. 117—166)



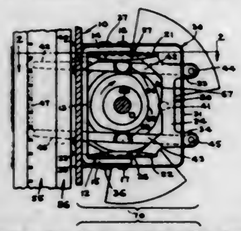
1. A method of dyeing textile material with dyed alkyl cellulose ether, which cellulose ether is originally in finely divided, fibrous form and is dyed by subjecting it in the solid state to the dissolved dyestuffs and developing solutions suitable for dyeing raw stock cotton and thereby producing a dyed cellulose ether in completely developed condition, comprising dissolving said dyed alkyl cellulose ether in an aqueous caustic alkali solution, treating the textile material with this alkali solution, treating the textile material with an acid solution that precipitates the dyed alkyl cellulose ether onto the fibers of the textile material, washing and drying the textile material.

2,448,516
PHOTOCELL OF LEAD SULFIDE
Robert J. Cashman, Glenview, Ill., assignor to Northwestern University, a corporation of Illinois
Application August 1, 1945, Serial No. 608,143
35 Claims. (Cl. 201—63)

1. The method of making a photoconductive resistance element which consists in depositing lead sulfide upon a surface by evaporation and condensation, and subjecting the lead sulfide during or after deposition to limit quantities of oxygen.



2,448,517
PHOTOCELL
Robert J. Cashman, Glen View, Ill., assignor to Northwestern University, a corporation of Illinois
Application February 9, 1944, Serial No. 521,594
21 Claims. (Cl. 201—63)

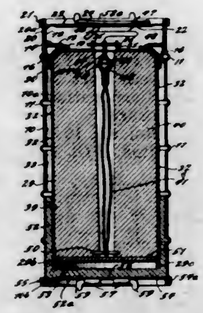


1. In a photo-sensitive cell, a hermetically sealed envelope having a wall capable of transmitting radiations in the infra-red region of the spectrum, a photo-sensitive surface in the envelope adapted to receive infra-red radiations passing through said wall, said surface including a deposit of activated thallous sulfide which has been formed on the surface by evaporating a quantity of chemically pure thallous sulfide in the envelope while under a vacuum and then activating the thallous sulfide which condenses on the surface by admitting limited quantities of oxygen to the envelope.

2,448,518
PHOTOCELL
Robert J. Cashman, Glenview, Ill., assignor to Northwestern University, a corporation of Illinois
Application April 7, 1944, Serial No. 530,038
12 Claims. (Cl. 201—63)

1. The method of activating thallous sulphide which consists in forming a deposit of thallous sulphide on a surface, and causing it to have a limited reaction with oxygen while maintained under partial vacuum in the presence of a catalyst and while under the influence of heat, and then sealing the activated material from the atmosphere without thereafter subjecting it to uncontrolled oxidation.

2,448,519
INTERMITTENT FILM FEED MECHANISM
Roy A. Clapp, Minneapolis, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application July 19, 1944, Serial No. 545,624
2 Claims. (Cl. 88—18.4)

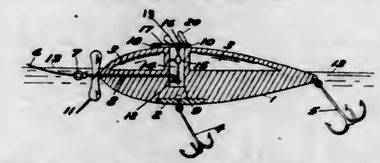


1. Apparatus for intermittently feeding a film having a succession of indicia bearing frames and a cooperating longitudinal series of equally spaced similar feed perforations past an exposure aperture comprising a claw feed mechanism having two fixedly spaced claws adapted to be disposed in non-adjacent perforations respectively above and below said exposure aperture when moving the film, and means for actuating said mechanism to successively insert said claws into said perforations, shift said claws in the desired direction of film movement for a distance slightly more than the longitudinal dimension of one of said frames, withdraw said claws from the film and then shift the claws in the opposite longitudinal direction to return them to starting position, the leading edges of said claws being spaced apart in the direction of film movement a distance slightly greater than the center to center distance between the engaged perforations, so that during the normal film advancing stroke of said mechanism the leading claw is in contact with the leading edge of its associated perforation to thereby pull the film positively past said exposure aperture and the trailing claw is free of contact with the leading edge of its associated perforation and so that when the claws are moved into engagement with the film to start each cycle of film feed the leading claw will slightly clear the leading edge of its associated perforation, and each of said claws having its dimension longitudinally of the film sufficiently less than the corresponding dimension of each perforation that both of said claws will clear the trailing edges of said associated perforations when moved into engagement with the film.

2,448,520
ESTERS
Martin E. Cupery, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 16, 1943, Serial No. 510,487
14 Claims. (Cl. 260—410.8)

1. A polyhydric alcohol ester of a benzoic acid selected from the group which consists of those in which the carboxy aryl group is linked directly by a single bond to an ethylenically bonded carbon and those in which the carboxy aryl group is linked to an ethylenically bonded carbon through a carbonyl group.

2,448,521
EMERGENCY SIGNALING DEVICE
Martin Dwyer, Hewlett Bay Park, N. Y.
Application May 17, 1943, Serial No. 487,261
7 Claims. (Cl. 102—37.8)



1. In a signalling device adapted to be held in hand during use, an outer container, an inner container for smoke producing compound or the like, means for hermetically sealing said inner container and its contents within said outer container, a cup-like spacing member secured to said outer casing and extending into it, said cup-like member having an opening in its bottom, means extending downwardly from said bottom to center an end of said inner container relative to said outer container, a heat insulating liner lying between portions of said inner container at one end and said downwardly extending means, a jacket of insulating material surrounding said inner container for a part of its length near its other end, said downwardly extending means of said spacing member, said heat insulating liner and said jacket serving to maintain said liner container spaced from said outer container and heat insulated therefrom, said outer container having an opening, a removable closure member normally hermetically closing said last-named opening, said inner container having escape openings to permit easy and voluminous escape therethrough to said last-named opening of smoke developed by said smoke producing compound upon its being burned within said inner container after removal of said closure member from said last-named opening, and means within said outer container for igniting said smoke producing compound access to which is made available upon removal of said closure member.

2,448,522
CAN COVER REMOVER
George C. Erb, Forest Hills West, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application September 5, 1945, Serial No. 614,534
4 Claims. (Cl. 220—43)

2. A container comprising in combination, a neck wall portion projecting outwardly from and surrounding an opening therein and terminating in a curled seat edge, a reclosure cover for said opening, said cover having a peripheral channel engageable over said curled seat edge and defined by an inner upstanding wall frictionally engageable with said curled seat edge and an outer depending wall disposed in spaced and substantially parallel relation to said inner wall and to said neck wall portion, said outer wall terminating in a curled pry-off edge, and a cover pry-off lever disposed adjacent said curled pry-off edge and having a cam end, said lever also having a lateral wall portion extending along one edge thereof for supporting the lever on the pry-off edge of said cover, said lateral wall portion terminating adjacent the outer surface of said depending outer wall of the cover, said lever adjacent its cam end having a locking lug extending beneath said cover pry-off edge and thence outwardly between the depending outer wall of said cover and said outwardly projecting container neck wall portion to a locality adjacent the lateral wall portion of the lever for permanently and loosely connecting the lever to the cover, whereby said lever is freely movable around the cover and vertically tiltable to bring its cam end into engagement with the container with a prying action at will around the cover for removing the cover from the container.

2,448,523
FISH LURE
Augustus F. Fibiger, Toledo, Ohio
Application November 28, 1945, Serial No. 631,443
1 Claim. (Cl. 43—43)

A fish lure body adapted to respond to line draft for less than full submergence in water, a crank shaft extending forwardly from a mid-portion of the body, a line-draft connection to the shaft forwardly of the body, a water wheel fixed to the shaft aft of the connection and forwardly of the body, said body having an upwardly open well from its mid-portion in which well the crank of the shaft is located, a slide guide in the well disposed upwardly from the shaft, a lever pivotally connected to the crank and extending upwardly thru the guide to protrude above the well open top, an eye on the body top forwardly of the well, an arm connected to the eye and to the protruding portion of the lever whereby the arm will respond to the crank rotation by up and down and side sway combined movements, pairs of wing

strips fixed to the arm for approximating water dip for the free end tips thereof in flutter-like movements relatively to the body from the arm operations, and a plurality of fish-ensnaring hooks swingably mounted on the body in intercepting direction of fish ascent toward attacking the wing flutter action of the strips.

2,448,524

COATED GRANULAR RESIN AND PROCESS OF MAKING SAME

Edmund John Gentner, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 7, 1947, Serial No. 784,752
8 Claims. (Cl. 117—100)

4. The process which comprises mixing granular polyvinyl acetate wet with water, with an amount of dialkali metal adipate equal to about 0.1 to 1% of the dry weight of said polymer and a quantity of a sulfated alcohol alkali metal salt having 8 to about 18 carbon atoms equal to 5 to 30% of the weight of said adipate and subsequently drying said polymer at a temperature of about 40 to 100° C.

8. As a new composition of matter, granular, thermoplastic polyvinyl acetate having individual granules thereof coated with an amount of dialkali metal adipate equal to about 0.1 to 1% of the dry weight of the polymer and an amount of a sulfated alcohol alkali metal salt containing 8 to about 18 carbon atoms equal to about 5 to 30% of the weight of said adipate.

2,448,525

PHOTOGRAPHIC ELEMENTS BEARING A POLYVINYLPYRIDINE SUBLAYER, A LAYER CONTAINING A SOLUBLE BORON COMPOUND AND A SILVER HALIDE SYNTHETIC HYDROXYL POLYMER LAYER AND THEIR PREPARATION

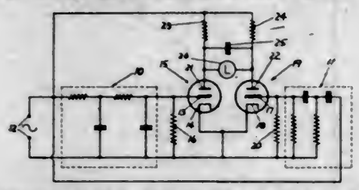
Charles F. Glick, New Brunswick, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application November 27, 1946, Serial No. 712,733
9 Claims. (Cl. 95—9)

1. A photographic element comprising a support, a water-insoluble film-forming vinylpyridine polymer sublayer on said support, a synthetic hydroxyl polymer intermediate layer on said support containing a soluble boron compound capable of yielding borate ions on said sublayer and a gelled synthetic hydroxyl polymer silver halide emulsion layer on said intermediate layer said hydroxyl polymer containing a plurality of recurring intralinear

$$-CH_2-\underset{|}{C}HOH-$$

groups and said vinylpyridine polymer being soluble in 1% aqueous acetic acid.



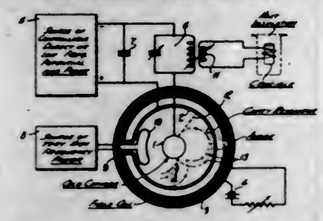
2,448,526

FREQUENCY DISCRIMINATING CIRCUITS

Thomas A. O. Gross, Boston, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application April 10, 1946, Serial No. 660,888
7 Claims. (Cl. 250—27)

1. A frequency discriminator comprising: means connected to a source of alternating voltage of varying frequency for deriving therefrom two alternating-voltage portions whose phases differ equally and oppositely from the phase of said source at a selected frequency; means also connected to said source of alternating voltage for deriving therefrom two additional alternating-voltage portions which are in phase with



said source; and means receptive of said out-of-phase and in-phase alternating-voltage portions for deriving therefrom a unidirectional output whose amplitude and sense are functions, respectively, of the magnitude and sense of any deviation of the frequency of said alternating voltage from said selected frequency.

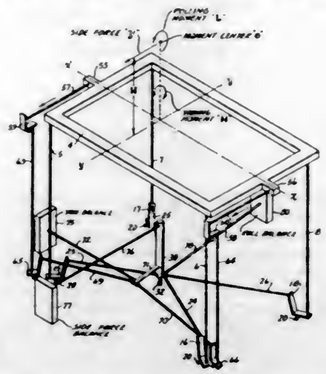
2,448,527

COLD CATHODE ELECTRON DISCHARGE DEVICE AND CIRCUITS THEREFOR

Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application September 8, 1944, Serial No. 553,138
14 Claims. (Cl. 250—36)

1. The method of operating a magnetron oscillator having a secondary emissive cold cathode and a surrounding anode structure, which comprises exciting said oscillator with very high frequency power of a frequency higher than the desired output frequency, and supplying said anode with an oscillating potential which oscillates between a value which is positive relative to said cathode and much higher than what would be the normal cut-off potential in the magnetron in the absence of output oscillations to thereby inhibit the growth of secondary electrons from said cathode, and a value below the normal cut-off potential but which is still positive relative to said cathode at which last value there is a growth of secondary electrons.



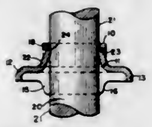
2,448,528

WIND TUNNEL BALANCE

Herbert M. Heuver, Dayton, Ohio

Application May 2, 1944, Serial No. 533,786
9 Claims. (Cl. 73—147)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. In a wind tunnel balance system for measuring forces and moments on a model being tested, a model support, a floating frame secured to said support and having six degrees of freedom with respect to three mutually perpendicular lift, drag and rolling coordinate axes, a floating lever, a lift balance connected to said lever, linkage connected to said lever at a common point, said linkage being adapted to apply components of force therein along the axis of said lever and to apply components of force in planes at right angles to each other and normal to said lever at said common point as a measure of pitch and rolling moments respectively acting on said frame, pitch and rolling moment balances respectively connected to said lever common point in the respective planes of the application of the respec-



tive moment force components thereto, separate linkages for transmitting drag and side forces from said frame to said lever, said separate linkages being respectively connected to said lever at points spaced from said common point and adapted to produce a reaction at said point equal and opposite the net force thereon due to moments on said frame due respectively to drag and side force moments exerted on said frame, and drag and side force balances connected to said lever beyond the connection of said drag and side force linkages.

2,448,529

VALVE STOP COLLAR

Charles B. Johnson, Pittsburgh, Pa., assignor to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application June 24, 1946, Serial No. 678,963
10 Claims. (Cl. 251—154)

1. A stop collar for rotary valves having a body provided with stop means and a valve stem projecting therefrom, comprising a die-stamped sheet metal member having a sleeve portion to receive the valve stem and a flange portion at one end of said sleeve portion provided with spaced stop lugs to contact the stop means on the valve body and limit rotation of the valve stem in each direction, and a plurality of resiliently yieldable locking tongues struck inwardly from the wall of said sleeve, projecting from said flange toward the opposite end of the sleeve and having free end edges adapted to bite into surfaces of the valve stem and lock said collar against axial or rotative movement on the stem in axially fixed relation to the valve body.

2,448,530

MODIFIED SILICONE COMPOSITIONS

Henry F. Jones, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

No Drawing. Application November 30, 1945, Serial No. 632,085
17 Claims. (Cl. 260—46.5)

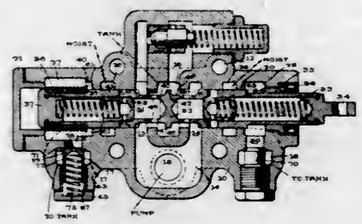
1. A curable composition comprising (1) a solid, elastic, curable methylpolysiloxane containing an average of from 1.98 to 2.00 methyl groups per silicon atom, said solid methylpolysiloxane having been obtained by condensing a liquid consisting of polymeric dimethylsiloxane containing up to 2 mol per cent copolymerized monomethylsiloxane, (2) from 0.1 to 6 per cent, by weight, based on the weight of (1), of a substance selected from the class consisting of mercury, oxides of mercury and salts of mercury, and (3) a peroxide cure accelerator for (1).

2,448,531

RESINOUS COPOLYMER OF ISOPROPENYL ACETATE

William O. Kenyon and Cornelius C. Unruh, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

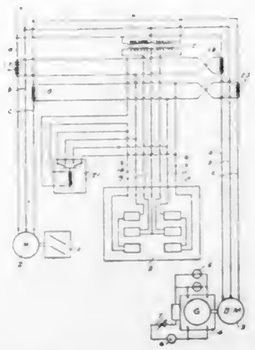
No Drawing. Application July 23, 1943, Serial No. 495,888
16 Claims. (Cl. 260—78.5)



1. A resinous copolymer of isopropenyl acetate and an ester selected from the group consisting of an ester of a monohydric alcohol and maleic acid and an ester of monohydric alcohol and fumaric acid, the molecular ratio of isopropenyl acetate to said ester in the copolymer being from 1:1.9 to 1:0.9.

2,448,532

AUTOMATIC POWER POSITION HOLD FOR CONTROL VALVES

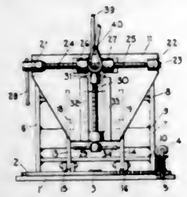


Hall Kirkham, Cleveland, Ohio, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio, a corporation of Ohio

Application September 9, 1946, Serial No. 695,680
11 Claims. (Cl. 277—20)

1. A control valve for use between a pump, a tank and a double acting hydraulic hoist, in combination, a housing having two hoist ports and two low pressure chambers, a plunger reciprocable in said housing, resilient centralizing means for said plunger, each end of the plunger having an effective area exposed in one of said chambers whereby pressure therein exerts longitudinal effort on the plunger, means to connect one of said chambers to one of said ports when the plunger is manually moved in one direction and vice versa, a discharge outlet for each chamber and a spring pressed discharge valve for each outlet to resist flow therethrough.

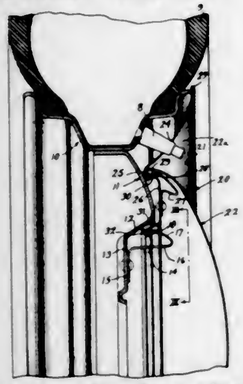
2,448,533
CONSISTENCY METER
Harold Warren Laurance, Coulee Dam, Wash.
Application June 18, 1946, Serial No. 677,472
1 Claim. (Cl. 73—54)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In a device for determining the consistency of a batch of concrete or the like being mixed in a mixing machine driven by an electric motor, a second motor having electrical characteristics similar to those of the mixer motor, a controllable load for said second motor, a potential transformer bank connected in the power line to the two motors, a current transformer in the power line to the mixer motor, a current transformer in the power line to the said second motor, a circuit for balancing the secondary currents of said current transformers, a wattmeter having its potential windings connected to said potential transformer and its current windings connected to said circuit, for indicating any difference in the said secondary currents.

2,448,534
SENSITIZED PHOTOGRAPHIC CELLULOSE ESTER SILVER HALIDE EMULSION
Wesley G. Lowe and Raife G. Tarkington, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 6, 1946, Serial No. 681,766
20 Claims. (Cl. 95—7)

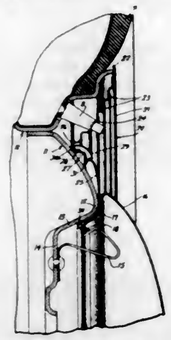
1. A photographic silver halide emulsion in which the silver halide is dispersed in a hydrolyzed cellulose carboxylic ester containing from 19% to 33% by weight of acyl groups, said emulsion containing ethylene diamine.



2,448,535
ROTATABLE STAND FOR SUPPORTING CABLE-THIMBLE VISE VERTICALLY OR HORIZONTALLY
Robert M. Leveira, San Francisco, Calif.
Application October 31, 1945, Serial No. 625,929
1 Claim. (Cl. 81—17.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

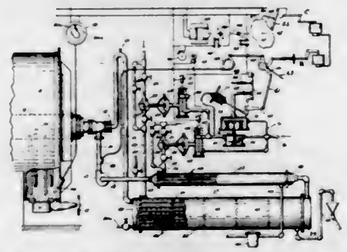
In a vise, a base, a frame including a pair of uprights and at least one cross member, means supporting said frame on said base for rotatable movement relative thereto about a normally vertical axis, means retaining said frame in rotatably adjusted position, a table hingedly connected to said frame for movement between a horizontally disposed position and a vertically disposed position, bearing means on said table, a spindle journaled in said bearing means and having a right hand screw threaded portion and a left hand screw threaded portion, a pair of clamp blocks threadedly engaged with the threaded portions of said spindle, additional bearing means on said table, a spindle threadedly engaged with

said additional bearing means and disposed perpendicularly to said first named spindle, a clamp block journaled to said second named spindle and being cooperable with said first named clamp blocks to clamp an object, brace means hinged to said frame, means on said table cooperable with said brace means to retain said table in horizontally disposed position, and means on said table cooperable with said cross member to retain said table in vertically disposed position.



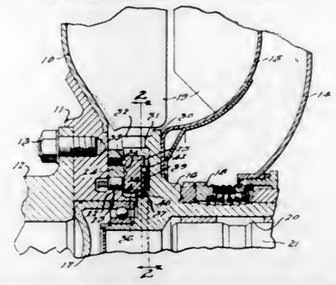
2,448,536
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application May 12, 1945, Serial No. 593,471
6 Claims. (Cl. 301—37)

1. In a cover structure for a wheel including tire rim and body parts and cover retaining means, a wheel cover for the outer side of the wheel having an inner turned margin provided with a resilient flexible cushion and having an outer portion engageable with one of said wheel parts, said cushion upon engagement by said retaining means yielding until said outer portion of the cover tightly bears against said wheel in tensioned engagement therewith.



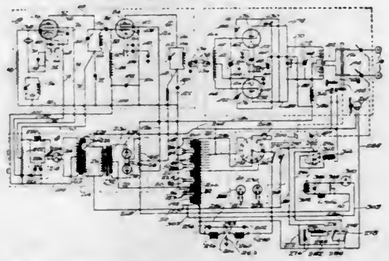
2,448,537
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application August 27, 1945, Serial No. 612,842
6 Claims. (Cl. 301—37)

1. In a cover structure for a wheel including a tire rim and a body part, a cover including inner and outer cover portions extending in substantially divergent relation from an annular axially outward opening junction groove, the outer portion being dimensioned to extend in concealing relation to the tire rim and having its junction portion opposite the body part, said inner portion extending inwardly in concealing relation to the body part and having a generally radially outwardly facing shoulder at the junction and



an outwardly opening groove at the axially outer side of said shoulder, and a reinforcing annular bead having an underturned outer edge bottomed in said junction groove and an underturned inner edge resting in said groove in the inner cover portion, said shoulder having radially outwardly protruding retaining bumps behind which said turned inner edge of the reinforcing bead is engaged in snap-on relationship.

2,448,538
CYCLIC REGULATION OF CRYSTALLIZERS
John E. Mason, Denver, Colo., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo., a corporation of Colorado
Application September 20, 1943, Serial No. 503,085
12 Claims. (Cl. 257—4)

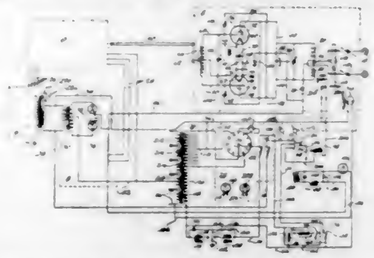


3. In a crystallizer comprising a tank for holding a quantity of mother liquor and a heat transfer element for changing the temperature of the mother liquor, means providing a closed circuit for circulating heat exchange fluid through said element, means for heating the fluid in said closed circuit, means for cooling the fluid in said closed circuit, means automatically movable to a plurality of positions for selectively actuating said heating means and said cooling means, means responsive to the temperature of said fluid for maintaining temperatures of said fluid predetermined in accordance with the position of said actuating means, and signalling means operated upon the actuation of said heating means for indicating the start of the heating period of said crystallizer.

2,448,539
FLUID COUPLING WITH CENTRIFUGAL LOCKUP MEANS
Edwin R. Maurer, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application February 19, 1945, Serial No. 578,631
9 Claims. (Cl. 192—3.2)

1. In combination with a fluid coupling having a driving element, a driven element and a fluid operable therebetween as a driving means, lock-up means for locking said elements against relative rotation, and blocker means for holding said lock-up means out of locking position when said driving element overruns said driven element and for releasing said lock-up means to permit locking said elements at predetermined speeds when said driven element overruns said driving element.

2,448,540
ELECTROPHYSIOTHERAPEUTIC APPARATUS
Rolland H. Maxson, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a corporation of Delaware
Application June 25, 1943, Serial No. 492,251
8 Claims. (Cl. 128—422)



1. An electro-therapeutic apparatus of the type comprising an oscillation generator and a patient's circuit, including an amplifier coupled to said generator and patient's circuit, the coupling between the amplifier and patient's circuit comprising an amplifier plate tank circuit having a very high full load effective Q.

2,448,541
ELECTROPHYSIOTHERAPEUTIC APPARATUS
Rolland H. Maxson, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a corporation of Delaware
Original application June 25, 1943, Serial No. 492,251. Divided and this application April 16, 1947, Serial No. 741,769
12 Claims. (Cl. 128—422)

6. An electrotherapeutic apparatus of the type comprising an oscillation generator and a pa-

tient's circuit, including coupling means adjustable between minimum and other coupling positions for transferring energy from the oscillation generator to the patient's circuit, means for adjusting said coupling means, an overload mechanism connected to be responsive to an overload

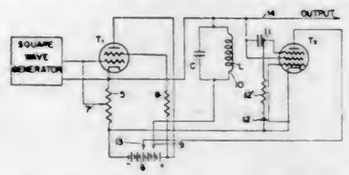
condition in the oscillation generator and operable to cut off the supply of energy to the patient's circuit upon occurrence of such an overload, and means operable by said adjusting means to reset the overload mechanism when said adjusting means is adjusted to substantially the minimum coupling position.

2,448,542

PHOTOGRAPHIC ELEMENTS HAVING ANTIHALATION LAYERS COMPOSED OF VINYLPYRIDINE POLYMERS AND ANTIHALATION MATERIALS

David Malcolm McQueen and Clay Weaver, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application August 1, 1946, Serial No. 687,708
8 Claims. (Cl. 95—9)



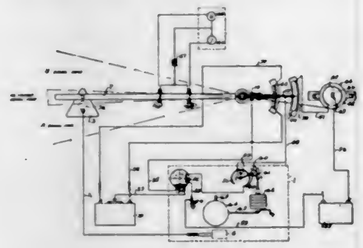
1. A photographic element comprising a support which transmits light, a light-sensitive layer on one side of said support and an antihalation layer on the other side of the support comprising a water-insoluble vinylpyridine polymer which is soluble in 1% aqueous acetic acid and an antihalation material.

2,448,543

CIRCUIT FOR PERIODICALLY GENERATING OSCILLATIONS

James R. Moore, Rumson, N. J., assignor to the United States of America as represented by the Secretary of War

Application November 28, 1942, Serial No. 467,271
4 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. Apparatus for producing electrical oscillations comprising, a resonant circuit, means for periodically shunting said resonant circuit with a variable impedance whereby said resonant circuit is caused alternately to oscillate and to cease oscillating, and an electronic circuit having a negative resistance characteristic coupled to said resonant circuit for maintaining the output thereof at predetermined amplitude levels during the oscillating periods.

2,448,544

AUTOMATIC SIMULATED TWO POINTER GLIDE PATH FOR GROUND TRAINING

Carl W. Muller, Osborn, Ohio

Application March 1, 1940, Serial No. 321,727
3 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

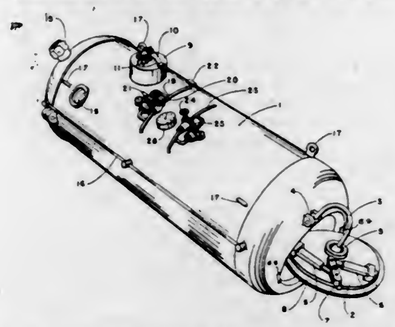
2. A blind landing indicating system for aviation ground trainers, comprising a signalling system for simulating a landing runway localizer beam indicating device and a control means for said signalling system, a reference surface, a course indicator movably supported on said surface and adapted to have a controlled motion proportional to the simulated velocity in flight of an aircraft and in an equivalent direction thereto, a connection between said course indicator and said signal control means for actuating said signal control means in response to deviation of said course indicator from a predetermined course on said reference surface representing the said landing runway, a second signal system for indicating simulated descent of said aircraft along a predetermined simulated glide path, and a control means for said second signal system actuated by said course indicator in accordance with the velocity thereof and simultaneously operated in accordance with the simulated rate of descent of said aircraft.

2,448,545

BATTLE SLED

John W. O'Daniel, Newark, Del.

Application November 28, 1944, Serial No. 565,559
4 Claims. (Cl. 280—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



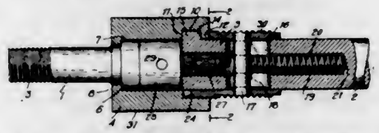
1. In combination with a vehicle, a series of sleds, each of said sleds being substantially of the same size and shape and being adapted to carry a single person in prone position, means to secure the following sleds to the leading sleds, said means including a pin on the rear of the runner of the leading sled and an aperture in the runner on the following sled, said securing means being substantially in the plane of the runner, and means for towingly attaching said series to said vehicle.

2,448,546

PORTABLE RECOMPRESSION CHAMBER

Lawrence M. Piemel and Bl'l J. Abernathy, Jr., United States Navy

Application September 4, 1945, Serial No. 614,326
3 Claims. (Cl. 128—204)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



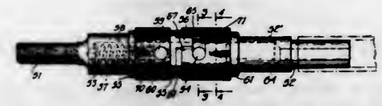
1. In a portable recompression chamber, a casing having a substantially elliptical open end with notches in the periphery of the opening, and a closure device having an arm pivoted to said casing adjacent said opening; said device comprising a substantially elliptical plate universally connected to said arm so that it can be moved into the interior of said casing, and a quick-acting toggle mechanism upon said plate and comprising elements shiftable into said notches to position said plate when it is closed.

2,448,547

COUPLING FOR RODS, CABLES, AND THE LIKE

George W. Purdy, Laurelton, N. Y.

Application August 6, 1943, Serial No. 497,612
13 Claims. (Cl. 287—103)



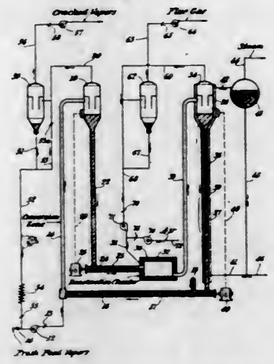
1. A coupler for rods, cables and the like comprising a female member having a channel formed interiorly thereof near one end with a multiplicity of inwardly projecting arcuate shaped lugs, said lugs forming one side of the channel and a part of the end surface of the female member and a male member having a multiplicity of fixed lugs corresponding in shape, position and size to the lugs of said female member which pass through the slots between the lugs of the female member and enter the channel and when locked being disposed behind the lugs of the female member and said male member having longitudinally movable lugs movable as a unit and having widths corresponding to the widths of the slots and the last-named lugs being biased to occupy positions between the first-named lugs when the parts are coupled together, said female member having an end surface flush with the end surfaces of said lugs carried thereby and the lugs of said male member having flush end surfaces for engaging the lugs of the female member.

2,448,548

COUPLING

George W. Purdy, Laurelton, N. Y.

Application April 5, 1944, Serial No. 529,580
9 Claims. (Cl. 287—104)

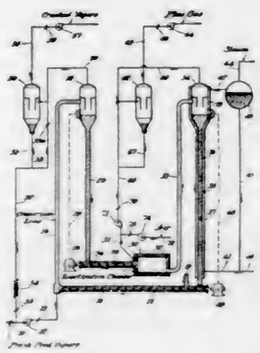


1. A coupler of the character set forth comprising a male member, a female member and a locking sleeve member, said locking sleeve member being non-rotatably mounted upon said male member but longitudinally movable thereon and biased to locking position, said sleeve member having a locking lug projecting from one end thereof, said male member having a coupling lug disposed on the periphery thereof at a point adjacent to said locking lug, and said female member having a longitudinal slot for accommodating the coupling lug in the coupling and uncoupling operations and the locking lug in the coupled position, said slot terminating in a circumferential slot for the reception of the coupling lug, and a coupling member upon which said female member is swiveled for rotary movements and said coupling member and said male member having their ends interlocking for transmission of rotary power.

2,448,549

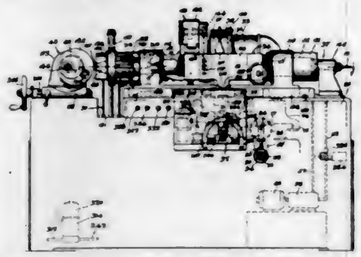
APPARATUS FOR CATALYTIC CONVERSION OF HYDROCARBON VAPORS

Carl S. Reed, New York, and August Henry Schutte, Tuckahoe, N. Y., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware



Application January 29, 1941, Serial No. 376,486
4 Claims. (Cl. 23—288)

1. In a catalytic conversion apparatus including a conversion chamber and a catalyst-reactiva-



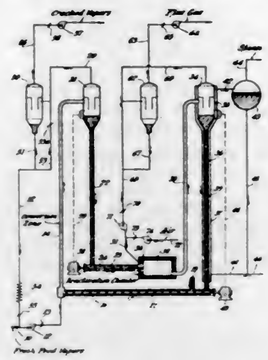
tion chamber, and a closed cyclic catalyst path therebetween including a vertical conduit, means for passing catalyst from one of said chambers to the upper end of said conduit, means for discharging the catalyst from the lower end of said conduit to the other of said chambers, said conduit being constructed to form a column of the received catalyst for compacting of the latter by gravity to maintain a required pressure differential between said chambers by sealing effect of the compacted catalyst, and a level control device responsive to fluctuations in the level of the catalyst in the conduit to control said discharge of the catalyst from the conduit for retention of a head of catalyst sufficient for maintaining said pressure differential.

2,448,550
HEAT RECOVERY SYSTEM FOR CATALYTIC CONVERSION PROCESSES
Carl S. Reed, New York, and August Henry Schutte, Hastings on Hudson, N. Y., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware
Continuation of application Serial No. 476,564, February 20, 1943, which is a division of application Serial No. 376,486, January 29, 1941. This application January 6, 1947, Serial No. 720,394
7 Claims. (Cl. 196—52)

1. The method of continuously carrying out a catalytic hydrocarbon reaction, which comprises continuously feeding catalyst and vaporous reactants through a conversion zone, separating reacted products from spent catalyst, continuously feeding spent catalyst through a reactivation zone in the presence of reactivating gas, continuously separating the reactivating gas from the reactivated catalyst, returning the catalyst to the conversion zone, maintaining a vertical head of catalyst in a gravity-packed mass to form a seal between the first separation zone and the reactivation zone and between the second separation zone and the conversion zone such that a pressure differential may be maintained, maintaining a pressure differential between said zones, introducing water into indirect heat exchange relation with the vertical head of catalyst between the reactivation zone and the conversion zone and removing the steam generated from the zone of indirect heat exchange.

2,448,551
GRINDING MACHINE
Simon E. Schroeder, Ripon, Wis., assignor to Barlow & Seelig Manufacturing Company, Ripon, Wis., a corporation of Delaware
Application May 12, 1944, Serial No. 535,339
58 Claims. (Cl. 51—95)

2. A grinding machine comprising, in combination, a grinding wheel mounted on a horizontal axis, a work holder swingable on a horizontal axis substantially parallel to the grinding wheel axis at one side thereof, means for controlling the swinging movement of said work holder and acting thereon in a downwardly direction at a radius from the axis thereof, and work supporting means mounted in said work holder at a radius from the work holder axis considerably less than half of the first-mentioned radius and adapted to be swung in an arc upwardly and toward the grinding wheel at an acute angle to the peripheral surface thereof upon swinging movement of the work holder to feed the work toward the wheel, the difference in said radii and the angular movement of the work toward the grinding wheel thereby providing a relatively small feeding movement of the work for a relatively large movement of the controlling means.

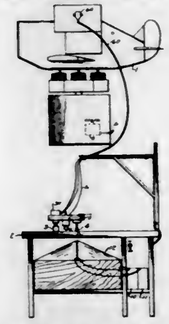


2,448,552
PHOTOGRAPHIC ELEMENTS HAVING LIGHT-SENSITIVE AND WATER-INSOLUBLE VINYLPYRIDINE POLYMER LAYERS
Ferdinand Schulze, Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application November 27, 1946, Serial No. 712,723
8 Claims. (Cl. 95—2)

1. A photographic element comprising a support, a light-sensitive hydrophilic silver halide colloid layer on said support, and a water-insoluble vinylpyridine polymer layer which is soluble in 1% aqueous acetic acid and is in adhesive contact with the colloid layer.

2,448,553
PROCESS FOR RECYCLING CATALYST FINES IN A CATALYST CONVERSION SYSTEM
August Henry Schutte, Hastings on Hudson, and Carl S. Reed, New York, N. Y., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware
Original application January 29, 1941, Serial No. 376,486. Divided and this application April 9, 1946, Serial No. 660,684
8 Claims. (Cl. 196—52)

1. In a catalytic hydrocarbon system wherein hydrocarbon vapors pass through a conversion zone and commingle in said conversion zone with finely divided catalyst in turbulent, suspended phase and thence to a first catalyst separating zone wherein the bulk of the spent catalyst is separated from the effluent vapors of the conversion zone and said spent catalyst is then introduced into a regeneration zone with an oxidizing gas which flows therethrough at such a velocity as to maintain the catalyst in a turbulent suspended phase, and wherein the bulk of re-



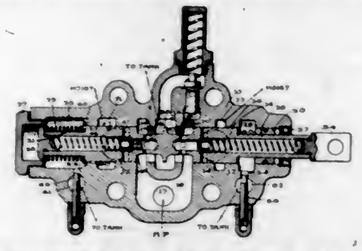
generated catalyst is then separated from the effluent gases of the regeneration zone in a second catalyst separating zone, the regenerated catalyst being returned in a closed circuit to said conversion zone, the improvement which comprises separately separating catalyst fines carried by the effluent vapors of the conversion zone and by the effluent gases of the regeneration zone, respectively, and directly injecting said fines back into the respective zones from which they were obtained.

2,448,554
ULTRA HIGH FREQUENCY TUNING UNIT
Nicholas T. Simopoulos, Dayton, Ohio
Application February 27, 1946, Serial No. 650,439½
3 Claims. (Cl. 250—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A radio frequency tuning unit having inductance and capacity variable by a single tuning operation, comprising stator means formed by a pair of arcuate plates united by structurally continuous arcuate end portions and spaced from each other to form a plurality of diametrical axial slots to provide inductive loops, rotor means formed by a pair of arcuate plates united intermediate their ends by a structurally continuous arcuate rib and spaced from each other to form a plurality of diametrical axial slots extending outwardly from said rib to the ends of said latter plates, said rotor means being radially spaced from said stator means to provide capacitance therebetween, and means for adjusting said rotor means circumferentially with respect to said stator means.

2,448,555
AUTOMATIC RADIO RANGE CONTROL FOR FLIGHT TRAINERS
Edward M. Sorensen, Dayton, Ohio; Helen S. Sorensen, administratrix of said Edward M. Sorensen, deceased
Application April 1, 1940, Serial No. 327,271
10 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

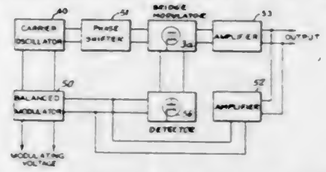
10. In combination, a reference surface, a course indicator movable relative to said reference surface and adapted to indicate the simulated course of an aircraft flight, a plurality of electric oscillators, a directive antenna connected to each of said oscillators for radiating a high-frequency electromagnetic field in definite zones over said reference surface, said fields being of different frequency, antenna pickup means mounted on said course indicator, a pair of resonant circuits respectively coupled to said pickup means and each responsive to the frequency of a different one of said fields, a signal generator for generating a plurality of positional signals of a different character and a plurality of control means each connected to one of said resonant circuits and to said signal generator and responsive to electromotive force generated in its respective resonant circuit for causing said signal generator to generate a signal of a character and volume dependent upon the electromotive force generated in each resonant circuit.



2,448,556
SYNTHETIC ELASTIC AND ELASTOMERIC PRODUCTS
Murray M. Sprung, Scotia, and Charles A. Burkhard, Alplaus, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application January 16, 1947, Serial No. 722,459
13 Claims. (Cl. 260—46.5)

1. A solid, elastic, curable polysiloxane consisting of methyl radicals, and hydrogen, silicon, and oxygen atoms obtained by condensing a liquid consisting of polymeric dimethylsiloxane containing (*a*) up to 2 mol per cent copolymerized monomethylsiloxane and (*b*) from 1.5 to 50 mol per cent copolymerized methylhydrogensiloxane.

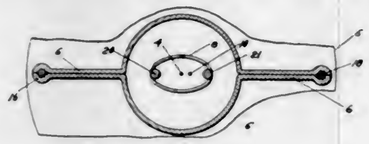
2,448,557
CONTROL VALVE WITH OPERATING POSITION HOLD
William T. Stephens, Painesville, Ohio, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application October 21, 1946, Serial No. 704,661
12 Claims. (Cl. 277—57)



2. In a hydraulic control valve, in combination, a housing having a high pressure inlet chamber,

a liquid return chamber and two power chambers, a valve plunger, resilient means to centralize said plunger in the housing, said plunger being selectively movable manually to either side of center position to connect one power chamber to the in-

let chamber and the other to the liquid return chamber, and means dependent on liquid flow between said last mentioned chambers to hold said plunger in the position manually set in spite of said centralizing means.

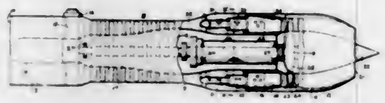


2,448,558
MODULATION NETWORKS
Edwin K. Stodola, Neptune, N. J.
Application November 17, 1942, Serial No. 465,922
47 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

6. A wave-length modulation system comprising a source of carrier voltage; a voltage-dividing circuit energized therefrom and including a resistor and an electron tube having such relative characteristics that control of the tube by the grid establishes a plate-cathode voltage drop bearing a substantially linear relationship to the modulating grid-voltage; means for deriving a modulated carrier voltage function from between two points, one being the juncture between the resistor and the tube, and the other being an intermediate point on the carrier voltage source; a source of modulating voltage; a balanced modulator for deriving a side-band voltage from said carrier source, as controlled by the modulating voltage; means for shifting the side-band voltage through a predetermined angle; means responsive to the modulating voltage in excess of a predetermined value for controlling the modulation of the tube to control the carrier voltage function; and means for combining the carrier voltage function and the shifted side-band voltage to provide a resultant phase modulated voltage.

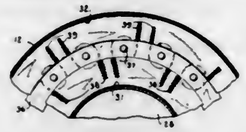
2,448,559
ELECTRON DISCHARGE TUBE
Paul W. Stutsman, Needham, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 5, 1944, Serial No. 534,292
6 Claims. (Cl. 250—27.5)

1. An electron discharge tube comprising an hermetically sealed envelope containing an electrode assembly comprising an electron-emissive cathode, an anode, and a thin wire auxiliary electrode adjacent said cathode, the cross-sectional diameter of said auxiliary electrode being less



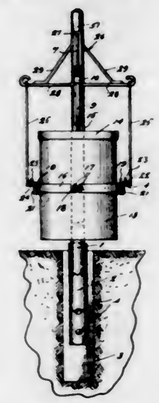
than a critical value of about 0.0015 inch, and the spacing of said auxiliary electrode from said cathode being less than a critical value of about 0.015 inch.

2,448,560
METHOD OF FORMING SCREENS FOR THE RECEPTION OF PROJECTED IMAGES
Robert O. Walker, Hartsdale, N. Y.
Application October 5, 1944, Serial No. 557,309
5 Claims. (Cl. 88—28.92)



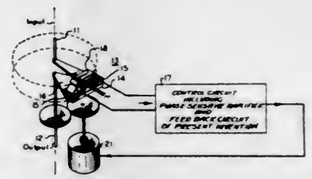
1. The method of forming a projection screen which consists in providing a sheet of closely woven fabric, impregnating said sheet with a sizing solution to stiffen the sheet, punching round holes throughout the area of said sheet with relatively wide separation, supporting said backing sheet in a horizontal plane, spraying upon one face of said sheet a coating of liquid plastic material and building up said coating in liquid state to a thickness which upon drying forms a smooth, outwardly flaring, light-reflecting surface symmetrically arranged around each aperture, and the flaring surfaces surrounding adjacent apertures merge into each other without substantially any intermediate flat surface.

2,448,561
GAS TURBINE APPARATUS
Stewart Way, Churchill Borough, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 1, 1946, Serial No. 666,374
3 Claims. (Cl. 263—19)

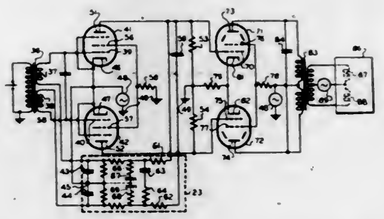


1. In a combustion chamber adapted for admission of fuel to the upstream end thereof and discharge of hot gases from the downstream end thereof, an annular wall comprising a plurality of annular sections of different sizes arranged concentrically and in order of increasing size from the upstream end toward the downstream end of said chamber with adjacent ends of the sections approximately aligned radially and with adjacent terminal portions of the sections radially spaced, and spacer members disposed in the radial spaces between adjacent terminal portions in overlapping relation to the latter.

2,448,562
COMBUSTION APPARATUS
Stewart Way, Churchill Borough, and Edwin P. Walsh, Boothwyn, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 24, 1946, Serial No. 678,932
5 Claims. (Cl. 263—19)



1. In combustion apparatus, wall structure defining a burner space and an overlapping air space, a plurality of spaced nozzles for admission of fuel sprays to said burner space, said wall structure being provided with a plurality of openings therethrough for passage of air from said overlapping air space to alternate spaces between adjacent fuel sprays within said burner space.



2,448,563
GARBAGE CAN HOLDER
Philip Wetzel, Houston, Tex.
Application November 12, 1946, Serial No. 709,165
5 Claims. (Cl. 248—146)

1. A garbage holder comprising a base, a pole carried by said base and projecting upwardly therefrom, a spindle projecting upwardly from the upper end of said pole and having a head at its upper end, a sleeve loosely mounted about the spindle between the pole and the head at the upper end of the spindle, a supporting arm carried by said sleeve and projecting radially from the spindle and the pole and formed with a recess near the outer end of its upper edge, a hanger having a handle straddling the arm and seated in said recess and arms extending laterally from its lower end, the arms of the hanger having their outer ends bent formed with retainer hooks, suspension bars disposed vertically and having their upper ends formed with openings through which the hooked ends of the hanger arms are passed to support the suspension bars from the hanger, lower ends of the suspension bars being bent inwardly and upwardly to form hooks, a container suspended from the hooks of the suspension bars and open at its top, a removable cover for said container, and a rod disposed vertically and having a forked upper end pivoted to the supporting arm near the outer end of its lower edge for vertical swinging movement into and out of position for its lower end to bear against the cover and hold the cover in place upon the container.

2,448,564
MOTOR CONTROL CIRCUITS
Jefferson R. Wilkerson, Bayside, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application July 24, 1942, Serial No. 452,239
30 Claims. (Cl. 318—31)

1. In a control system for a ponderable object having means for producing a reversible-phase, variable magnitude alternating control signal corresponding to the desired motion of said object and also having a servo system for moving said object, the combination comprising balanced two-channel electronic means for amplifying said signal and producing therefrom a reversible-polarity, variable-magnitude, unidirectional output signal, balanced circuit means responsive to said output signal for producing therefrom oppositely varying unidirectional feed-back signals respectively having components corresponding to the magnitude of said unidirectional signal and to at least one time integral thereof, the amplification of said amplifying means being much larger than the attenuation of said circuit means, means for oppositely and degeneratively controlling the amplification of said two channels by said respective feed-back signals, and means for controlling said servo system by said output signal, whereby said servo system may be controlled in accordance with said control signal and at least one time derivative thereof.

21. In a control circuit of the character described, an amplifier having an input and an output, the voltage output of said amplifier being connected across said output, a feedback circuit connected across said output and connected to said input, and a reactance in said feedback circuit for providing a feedback voltage component corresponding to the voltage applied to said feedback circuit modified with respect to time, said feedback voltage being supplied in a degenerative sense to the input.

2,448,565

DIMETHYL SILICONE ELASTOMERS AND METHOD OF PREPARING THE SAME

James G. E. Wright, Alplaus, and Curtis S. Oliver, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

No Drawing. Application March 14, 1944, Serial No. 526,472
13 Claims. (Cl. 260—37)

1. A composition comprising a solid, elastic, curable methylpolysiloxane consisting of methyl radicals and silicon and oxygen atoms and containing an average of from 1.98 to 2.00 methyl groups per silicon atom, said solid methylpolysiloxane having been obtained by condensing a liquid consisting of polymeric dimethylsiloxane containing up to 2 mol per cent copolymerized monomethylsiloxane, having incorporated therein from 1 to 6 per cent by weight thereof of benzoyl peroxide.

2,448,566

PROCESS OF OBTAINING DIPENTAERYTHRITOL FROM MIXTURES CONTAINING THE SAME

Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, Allentown, Pa., a corporation of New York

No Drawing. Application March 11, 1944, Serial No. 526,128
14 Claims. (Cl. 260—615)

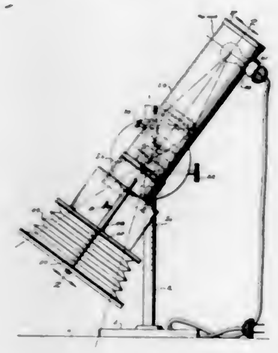
1. The process of separating dipentaerythritol from a mixture of pentaerythritol and dipentaerythritol which form an aqueous equilibrium in solution interfering with the crystallization of dipentaerythritol in substantially pure form therefrom and containing a ratio of dipentaerythritol to pentaerythritol greater than about 8 parts of dipentaerythritol by weight to about 92 parts of pentaerythritol which comprises supplying dipentaerythritol to a solution of said mixture in an amount of raise the ratio of dipentaerythritol to pentaerythritol to a ratio substantially above 30 to 70 to disturb said interfering aqueous equilibrium and furnishing heat to provide a resulting aqueous solution of a temperature above about 68° C. where an interfering molecular complex between pentaerythritol and dipentaerythritol is not encountered; next cooling said aqueous solution to a temperature therebelow to crystallize dipentaerythritol from the solution, the amount of water present being controlled to provide a solution of a crystallization point not greater than said temperature of about 68° C. from which dipentaerythritol substantially in excess of that supplied to the solution will crystallize but in which substantially all of the pentaerythritol of said mixture will remain in solution at the temperature at which the crystals of dipentaerythritol are separated from the aqueous medium; and separating the crystals of dipentaerythritol from the aqueous medium at a temperature below said temperature of about 68° C.

2,448,567

GREASE COMPOSITIONS

William A. Zisman, Washington, D. C., and George M. Hain, United States Navy

No Drawing. Application April 18, 1945, Serial No. 589,008
10 Claims. (Cl. 252—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A lubricant comprising from about 95% to about 80% by weight of a branched-chain alkyl di-ester of a carboxylic acid having from five to twelve carbon atoms per molecule blended with from about 5% to about 20% by weight of a soap to produce a stable grease, the sum of the percentages of these ingredients totaling 100 percent.

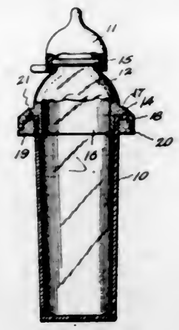
2,448,568

APPARATUS AND METHOD FOR RECTIFYING AND PROJECTING AERIAL PHOTOGRAPHS

Max Zwillinger and Samuel G. Hall, Washington, D. C.

Application March 7, 1941, Serial No. 382,178
12 Claims. (Cl. 88—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An apparatus for projecting a tilted aerial photograph, comprising a cylindrical body member, a diaphragm containing a pinhole aperture mounted transversely thereof, a source of illumination, means for mounting said source on one side of said diaphragm, means for converging the rays of light emanating from the said source to obtain an intense illumination at the pinhole aperture for projection therethrough, and means for mounting said photograph on the opposite side of said diaphragm and at an adjustable distance from the pinhole aperture therein, the plane of the photograph being perpendicular to the optical axis of said projector.



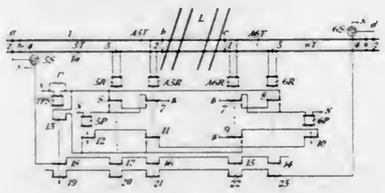
2,448,569

NURSING UNIT

Adda M. Allen, Arlington, Va., assignor to Disposable Bottle Corporation, Washington, D. C., a corporation of Delaware

Application March 14, 1944, Serial No. 526,354
3 Claims. (Cl. 215—11)

1. A nursing unit comprising a reusable collar and nipple, and a disposable container body made of pliant material capable of being pressed inwardly by hand to aid the nursing operation, said container having substantially straight side walls, a closed bottom and an open top end for removable attachment to said collar, said collar comprising a neck portion having a top central opening with means around said opening for the removable attachment of said nipple, said neck portion having a short depending skirt around which the material of the open top end of said container is wrapped and an annular sealing groove adjacent the upper end of said skirt into which the material of the open top end of the container is bent to be sealed therein, said neck portion having a threaded section thereon and said collar further comprising a narrow annular clamping ring of such diameter as to pass upwardly over and around said container from the closed bottom end thereof and to be disposed around the outside of the open top end of said



container, leaving the body thereof exposed to be grasped by the hand and compressed as necessary during the nursing operation, said clamping ring being adjustably attached to said neck portion by cooperating threads and having a sealing surface which is presented to the material of the open top end of said container in said groove and which presses said material into sealing engagement with said skirt when said ring is adjusted on said neck portion.

2,448,570

TRAP CIRCUIT CONTROL FOR RAILWAY SIGNALS

Earl M. Allen, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application April 5, 1947, Serial No. 739,569
6 Claims. (Cl. 246—41)

1. In a control arrangement for a trap stick relay in a railway signal control system for a stretch of railway track divided into a first and a second section and also a dead section between said first and second sections, the combination comprising, an insulated joint in one side of each of said first and second sections, a track circuit for each of said first and second sections each including a track relay connected across the rails of the end of its section which is adjacent said dead section and including a source of current connected across the rails of the opposite end of its section and also including a second track relay connected around the said insulated joint in one side of its section, a first and a second pick-up circuit for said trap stick relay one of which is controlled by a back contact of the first track relay and by a front contact of the second track relay for one of said track circuits and the other of which is similarly controlled by the track relays for the other track circuit, a slow pick-up and slow release relay for each of said track circuits each having an energizing circuit controlled by a front contact of the first track relay for its section and each also having a second energizing circuit controlled by back contacts of both track relays for its section, a stick circuit for said trap stick relay controlled by front contacts of both said slow pick-up and slow release relays and by front contacts of both of said first track relays, a second stick circuit for said trap stick relay controlled by a back contact of the first track relay for one of said sections, and a third stick circuit for said trap stick relay controlled by a back contact of the first track relay for the other section.

2,448,571

SIZED ORGANIC DERIVATIVE OF CELLULOSE YARN

Ralph H. Balch and Irma G. McCormick, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application July 18, 1945, Serial No. 605,848
3 Claims. (Cl. 117—139.5)

1. A textile yarn of cellulose acetate sized with a composition comprising about 79% by weight of casein, about 16% of triethanolamine and about 5% of triethyl phosphate.

2,448,572

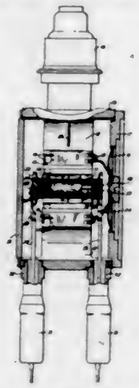
COMPOSITION COMPRISING AN ACYL PEROXIDE CURED POLYESTER AND AN ALKALINE CARBONATE

Burnard S. Biggs, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application April 30, 1943, Serial No. 485,162
10 Claims. (Cl. 260—40)

10. A polymer composition comprising a finely divided alkaline carbonate intimately mixed with an acyl peroxide cured polyester the ester linkages of which are carboxylic ester groups, the ester chains of which are essentially linear, said polyester possessing a degree of linear growth indicated by a ratio of ester groups to total ester, hydroxyl and carboxyl groups of at least 98 per cent, said polyester containing, as the sole non-benzenoid unsaturation, less than five olefinic bonds per 400 atoms in the linear ester chains.

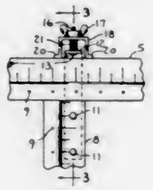
2,448,573



CATHODE STRUCTURE FOR ELECTRON DISCHARGE DEVICES

Charles R. Blazier, Pittsburgh, Pa., and Douglas A. S. Hale, Verona, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

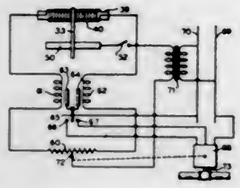
Application February 28, 1946, Serial No. 650,962
10 Claims. (Cl. 250—27.5)



1. A cathode assembly comprising a hollow cylindrical cathode member, a fixed member adjacent one end of said cathode member, a helical heater element within said cathode member and having one end seated against said fixed member, support means for said heater element in lateral

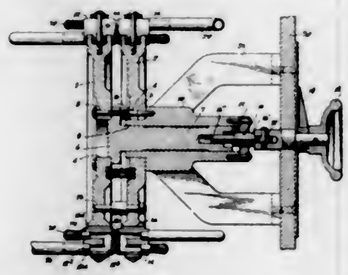
engagement therewith, and means compressing said element against said fixed member to lock

said element against longitudinal movement relative to said support means.



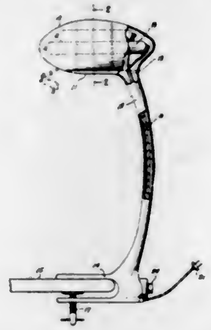
2,448,574
CLAMP FOR CURTAIN STRETCHERS
Werner H. Bothe, Kenosha, Wis., assignor to Worldsbest Industries, Inc., Cudahy, Wis., a corporation of Wisconsin
Application September 4, 1947, Serial No. 772,176
4 Claims. (Cl. 287—54)

1. In a curtain stretcher having frame bars extending at angles to each other, one of said bars abutting an end of the other bar, a fitting for securing said bars in abutting clamped relation comprising a member anchored to one of said bars and having an end in spaced relation thereto, a threaded clamping bolt carried by said end of said member, a clamping head loosely mounted on the shank of said bolt, and engageable at spaced points with the other bar, and a clamping nut mounted on said bolt and engageable with said head to move it to a clamping position.



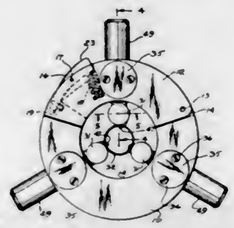
2,448,575
ELECTRICAL INSTRUMENT FOLLOW-UP SYSTEM
Edwin C. Burdick, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 18, 1942, Serial No. 447,543
11 Claims. (Cl. 318—29)

1. The combination in an electric proportioning system, of a bridge circuit including a measuring potentiometer resistance, a follow-up potentiometer resistance, a measuring contact, means for pressing said contact into engagement with said measuring resistance and thereby creating frictional resistance to the relative adjustment of said measuring contact and measuring resistance, and a follow-up contact in engagement with and adjustable relative to said follow-up resistance, a source of current, means through which said source supplies bridge energizing current to said contacts, a meter element responsive to variations in a control quantity and given movements independent of said frictional resistance and proportional to said variations, means actuated by said meter element to adjust said measuring contact relative to said measuring re-



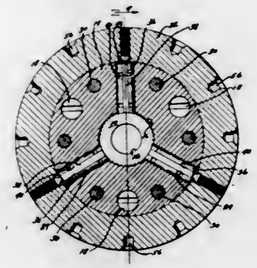
sistance in accordance with said movements, a reversible electric control motor, adjustable motor energizing connections separate from said circuit and through which said source supplies energizing current to said motor, and a relay mechanism jointly responsive to the position of said contacts relative to the said resistances respectively engaged by said contacts for adjusting said motor energizing connections to effect operation of said motor in the direction and to the extent required for the adjustment of said follow-up contact on and in accordance with each adjustment of said measuring contact.

2,448,576
SPARK GAP DEVICE
Emil R. Capita, North Bergen, N. J.
Application September 14, 1945, Serial No. 616,284
17 Claims. (Cl. 315—57)



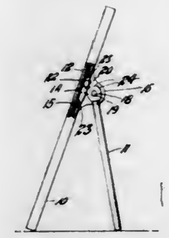
1. In a quench gap device, the combination of a first mounting member, a plurality of spark gap elements secured to said first mounting member, a second mounting member, a plurality of spark gap elements secured to said second mounting member, the spark gap elements on the first mounting member having sparking surfaces facing toward the elements on the second mounting member, the spark gap elements on said second mounting member having sparking surfaces facing toward the sparking surfaces of the elements on said first mounting member and means including a compound screw member for moving said mounting members with respect to each other to vary the lengths of the gaps between the sparking surfaces.

2,448,577
ELECTRIC IRON
Sesto Chiarotti and Anita Chiarotti, Royal Oak, Mich.
Application August 9, 1946, Serial No. 689,455
1 Claim. (Cl. 219—21)



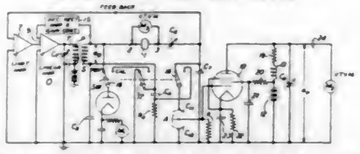
In an electric heating iron, a vertically-disposed hollow post having a horizontally-disposed base on an end thereof, said base being provided with a horizontally-disposed slot for the reception therein of an edge of a supporting surface, clamping means carried by said base for releasably securing the latter to the edge of the supporting surface, a horizontally-disposed plate supported on the other end of said post, an oval-shaped case mounted on said plate and attached thereto, and means within said oval-shaped case for heating the latter, said means comprising a plurality of heating coils disposed within said case, an electrical conductor cable connected to said heating coils for conveying electrical energy from a source of electrical energy, and switch means carried by said post for controlling the flow of electrical energy through said heating coils and cable.

2,448,578
TUBE CUTTER
Ernest E. Condon, Hermanville, Md.
Application October 2, 1946, Serial No. 700,658
7 Claims. (Cl. 30—95)



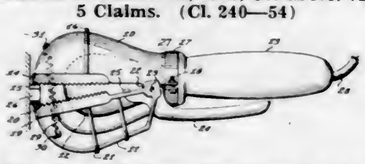
1. A cutter comprising a body having an opening therein, a plurality of spring-pressed plungers supported on said body, each of said plungers having a tube-engaging roller at its inner end lying within said opening, and a spring-pressed knife mounted on each of said plungers having an edge adapted to engage the wall of a tube held between said rollers and extending transversely through said opening, whereby upon relative rotation of said cutter and tube, the tube may be cut by said knives.

2,448,579
CHUCK
Walter Coulson, Detroit, Mich.
Application June 7, 1947, Serial No. 753,320
8 Claims. (Cl. 279—66)



6. A chuck comprising an adapter plate, a retaining ring having an axial bore therethrough secured to said adapter plate, said retaining ring having radially extending and circumferentially spaced bores through the wall thereof intersecting the outer end face of said retaining ring, jaws slidably mounted in the radially extending bores, said jaws being substantially cylindrical and having a beveled outer end face, a flat side portion on said jaws adjacent the intersection of the bores with the end face of said retaining ring, a positioning ring rotatably received on the outer periphery of said retaining ring, a retainer plate secured to the outer end face of said retaining ring in contact with the flat face portion on said jaws, means for urging said jaws outwardly, and radially adjustable projections carried by said rotatable ring for engagement with the beveled end surface of said jaws.

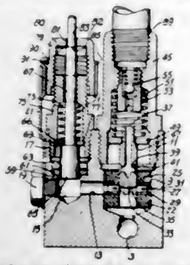
2,448,580
EASEL FRAME
William J. Crosby, Waterbury, Conn.
Application October 30, 1945, Serial No. 625,490
4 Claims. (Cl. 248—37)



1. An easel frame comprising a panel having an opening therein, a pair of lugs projecting from the rear of the panel on either side of said opening, each of said lugs having a bearing and a channel leading from an edge of said opening to the bearing, a leg, journals projecting from opposite sides of the leg and adapted to slide along said channels and to rotate in said bearings, and a resilient member adapted to seat said journals in the bearings.

2,448,581
TESTING CIRCUITS FOR PIEZOELECTRIC CRYSTALS
Irvin E. Fair, Basking Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 27, 1945, Serial No. 574,953
21 Claims. (Cl. 175—183)

1. A circuit for measuring quality factors of a piezoelectric crystal comprising a crystal to be tested, a source of alternating electric energy, a crystal driving circuit comprising a capacity means coupling the crystal to the source, a frequency determining means in said source coupled to the driving circuit whereby the frequency of said source is controlled to equal the resonant frequency of the crystal and said coupling capacity means, a resistance means and second capacity means connected in series and coupled to the crystal driving circuit so as to have impressed on said series circuit a voltage substantially proportional to the voltage appearing across the first capacity means, said resistance means having a resistance large compared to the reactance of the second capacity means at the frequency of the source of energy, a voltage measuring means, and a switch for selectively connecting the voltage measuring means either across a portion of the crystal driving circuit whereby one quality factor is measured or across the second capacity means whereby a different quality factor is measured.



2,448,582
LAMP GUARD
Floyd M. Fike, Flagstaff, Ariz.
Application December 20, 1946, Serial No. 717,375
5 Claims. (Cl. 240—54)

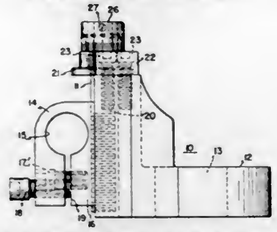
1. In a guard for portable electric lights and the like, a handle in which a lamp bulb is mounted, a shield covering substantially one-half of the bulb having a gripping jaw at the outer end and on the edge thereof, said shield having a rectangular shaped rim extending over the back thereof, a wire frame covering the other half of the bulb, said wire frame also having a gripping jaw at the outer end and on the edge thereof and a rectangular shaped rim extending over the back thereof, means hinging the wire frame to the shield, means resiliently urging the jaws of the shield and frame together, and means clamping the shield on the end of the handle.

2,448,583
LUBRICANT INJECTOR
Alexander P. Fox, University City, Mo., assignor to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application March 31, 1945, Serial No. 585,834
4 Claims. (Cl. 184—7)

1. A lubricant injector comprising a chambered body having an inlet and a coaxial outlet, a check valve in the outlet, spaced annular resilient packing means within the body, annular fluid-transmitting means spacing said packing means, a hollow injector piston movable within the packing and spacer and having a solid face presented to pressure from the inlet and having a port on its other end communicating with said outlet, said piston having a peripheral communication from its hollow portion, means biasing said piston toward an initial position wherein said peripheral means is within said annular spacing

means, an auxiliary chamber in said body, a movable metering piston in said chamber, means biasing said metering piston to an initial position, a fluid connection from said auxiliary chamber to said hollow spacing means, whereby when said injector piston is moved against its bias by pressure from the inlet, fluid is forced from the inlet to said auxiliary chamber to displace the metering piston, and when said first piston is biased toward its initial position by decrease in pressure in the inlet, its hollow form produces a communication between said auxiliary chamber and said outlet.

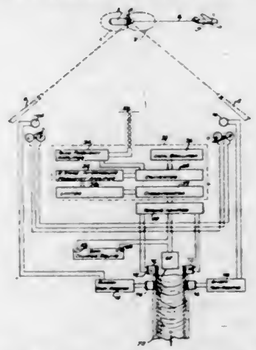
2,448,584
CURED POLYESTER SYNTHETIC RUBBERS FORMED FROM DISECONDARY GLYCOLS
Carl J. Frosch, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application November 24, 1943, Serial No. 511,591
8 Claims. (Cl. 260—75)



1. A cured synthetic elastomer obtained by curing, with between about .5 per cent and about 5 per cent by weight of benzoyl peroxide, a viscous, gummy 2,3 dihydroxybutane-dicarboxyhydrocarbon polyester, the average molecules of which polyester contain at least 98 ester groups per 100 ester, hydroxyl and carboxyl groups, said polyester containing less than five olefinic bonds per 400 atoms in the linear ester chains calculated by assuming no cross-linking between molecules at the unsaturated bonds, said polyester containing no nox-benzenoid unsaturation.

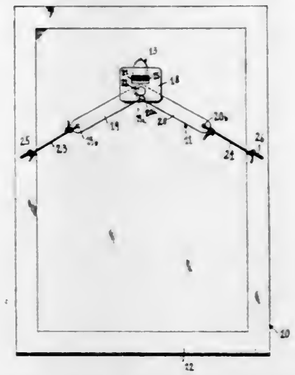
2,448,585
ORGANIC PEROXIDE-CURABLE AND ORGANIC PEROXIDE-CURED SYNTHETIC POLYESTER RUBBERS
Calvin S. Fuller, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 30, 1943, Serial No. 485,202
3 Claims. (Cl. 260—75)

2. A cured synthetic rubber comprising a product obtained by heating to a temperature above about 105° C., with a small amount of benzoyl peroxide, a fusible polyester prepared by the esterification of a reaction mixture consisting of



a dihydroxy straight chain alkane and isopropylene glycol, the isopropylene glycol constituting at least 80 per cent of the glycol mixture, together with a mixture of dicarboxylic acids consisting of sebacic acid and maleic acid, the sebacic acid constituting at least 95 mol per cent of the acid mixture, the number of ester groups in said polyester constituting at least 98 per cent of the total number of ester, hydroxyl and carboxyl groups.

2,448,586
TOOLHOLDER FOR LATHES
William A. Gile, Stoneham, Mass.
Application March 13, 1946, Serial No. 654,036
2 Claims. (Cl. 29—96)

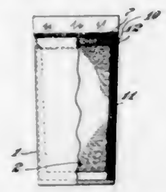


1. A tool holder having a base member including an upstanding face-plate provided with an approximately vertically disposed dovetail mortise, tool-bar-carrying means having a tenon snugly fitting said mortise throughout the length of the tenon, a screw in threaded engagement with said tool-bar-carrying means, a flange on said screw near the upper end thereof, and a cap piece removably secured to the top surface of said face-plate cooperating with said flange and the top surface of said face-plate to prevent axial movement of said flange and screw, whereby the rotary movement of said screw will produce movement of said tool-bar-carrying means relatively to said face plate, and means for locking said tool-bar-carrying means in selected positions.

2,448,587
DIRECTIONALLY SENSITIVE FIRING ERROR INDICATION
Alex E. S. Green, Flushing, N. Y., assignor to California Institute Research Foundation, Pasadena, Calif., a corporation of California
Application March 18, 1944, Serial No. 527,090
8 Claims. (Cl. 177—352)

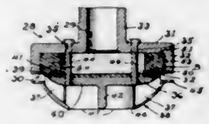
4. In an apparatus for determining a spatial relation between a target and a passing bullet, a radio transmitter located in the target and comprising: at least a pair of condenser microphones, said microphones including shockwave sensitive diaphragms stretched under tension, means for varying the tension of said diaphragms, and weights carried by said diaphragms, the masses of said weights being so selected and the tensions of said diaphragms being so adjusted that when said diaphragms are excited by a shockwave they vibrate at preselected distinguishable frequencies; and an oscillator common to, and distinguishably modulated by, said microphones.

2,448,588
SUSPENDING DEVICE
George Greenberg, New York, N. Y.
Application May 25, 1946, Serial No. 672,290
1 Claim. (Cl. 248—29)



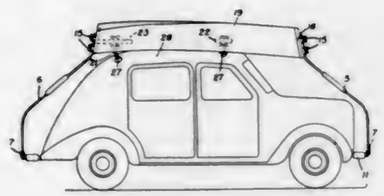
A suspending device for picture frames or the like, the combination, comprising a hook having a plate-like forwardly bent wide portion being in a horizontal position when the hook is secured on a wall or the like, a base plate, an elongated straight opening in the upper part of said plate whereby the same may be suspended on said forwardly bent portion of the hook, its opening then being in a fixed horizontal position, two arms projecting from the lower part of the base plate, their inner ends overlapping part of the base plate in a releasable and adjustable manner, cooperating means on the picture frame or the like object to be suspended, and at the ends of the arms, respectively, said means being adapted to receive a cord secured to them, and an adjustable length of cord tied at its ends to the respective pair of said means.

2,448,589
DOUBLE WALL VESSEL
Russell A. Gulick, Lynnfield, Mass., assignor, by mesne assignments, to Stator Corporation, a corporation of Rhode Island
Application July 3, 1943, Serial No. 493,371
3 Claims. (Cl. 215—13)



1. A double wall vessel comprising inner and outer containers of ceramic material having upper ends and lower body portions, said upper ends having inner and outer opposing surfaces with a narrow space therebetween and said body portions having opposing surfaces with a wider space therebetween, said inner surface of the upper end of the outer container being fire-colored throughout only a relatively narrow annular zone and

said inner surface of the body portion of the outer container being colored by a surface coat-



ing, and a band of cementitious material bridging said narrow space in said annular zone.

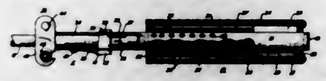
2,448,590
APPARATUS FOR DISPERSING GASES IN LIQUIDS
Roland E. Gunther, Oceanside, N. Y.
Application October 18, 1946, Serial No. 704,236
4 Claims. (Cl. 261—93)

1. In gas and liquid contact apparatus, a housing defining a compartment, a gas inlet thereto and a downwardly-opening gas outlet therefrom; a cake of porous media within said compartment; and impeller means closing a part of said outlet and providing a support for said cake, including an inverted dome-like portion directly below said cake, being of less diameter than those of said gas outlet and said cake, and impeller blades carried by said portion.

2,448,591
BOAT LOADING DEVICE
George W. Harder, Louisville, Ky.
Application December 17, 1946, Serial No. 716,739
4 Claims. (Cl. 214—77)

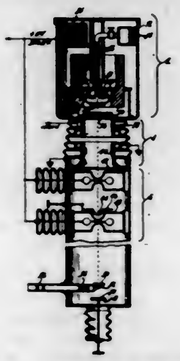
1. A loading device for vehicles comprising a pair of angular arms pivoted at their lower ends respectively to the front and rear of a vehicle for vertical swinging movement, said arms having their lower ends pivoted adjacent one side of the vehicle and their upper ends offset and raised toward the center of the vehicle to cause an initial raising movement of the article above the top of the vehicle upon a downward swinging of the arms at said one side of the vehicle, vertically adjustable legs carried by the article for engaging the vehicle.

2,448,592
PLUG CONNECTOR
Carl F. Hart, Miami, Fla., assignor of one-third to Carl J. Frederickson and one-third to Paul J. Mueller, Miami, Fla.
Application June 10, 1943, Serial No. 490,317
1 Claim. (Cl. 173—343)



In an electric plug connector, a plug body having a centrally disposed cylindrical opening extending inward from the inner end thereof with the opposite end provided with an annular flange having a concave under surface and with a centrally disposed opening in axial alignment with and communicating with said cylindrical opening, said opposite end having diametrically opposed recesses at the sides of said centrally disposed opening, a pair of diametrically opposed conductors extending lengthwise in said cylindrical opening and positioned against the wall of said plug body, arcuate contact head portions extending circumferentially from said conductors and each terminating in a plane corresponding with the inner ends of the recesses, stop flanges extending radially from said head portions, a plug wedged in said cylindrical opening securing said conductors against the walls of the plug body, one of said conductors extending through said wedge plug and terminating in a free end portion forming one external contact, the other of said conductors extending out of the opening and over the edge of the plug body, a threaded sleeve positioned over the said plug body anchoring the end of the conductor extending over the edge of the plug body providing another external contact, a plug cap having a guide bar with oppositely disposed flat sides projecting at the inner end adapted to be inserted in the centrally disposed opening in the said opposite end of the plug body, said cap having a counterbore around the base of the guide bar, contact prongs with shoes at the outer ends thereof positioned against the flat sides of the guide bar, said contact prongs and shoes adapted to enter the recesses in the said opposite end of the plug body with the guide bar in the centrally disposed opening, said cap having a neck of reduced diameter on the end opposite to the end carrying the guide bar, and means connecting wires of an electric cord entering the cap through the neck to the contact prongs in the said counterbore.

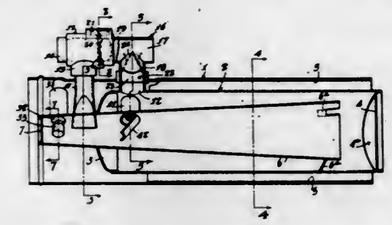
2,448,593
FLASH AND BLAST REDUCER
Raymond A. Heising, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 26, 1944, Serial No. 560,458
1 Claim. (Cl. 89—14)



A device for attaching a flash and blast reducer to the muzzle of a firearm having a fixed projection on the barrel thereof comprising a U-shaped trough attached to the rear end of the

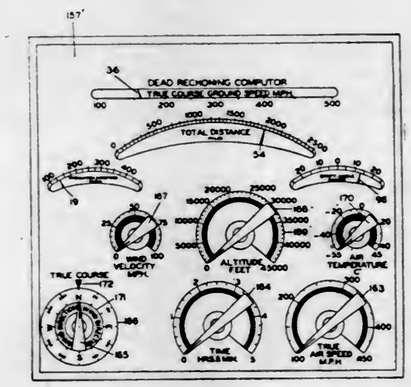
reducer and adapted to receive the barrel, a conical seat attached to the front end of said trough and adapted to fit over the muzzle, two opposed slots in the sides of said trough, a wedge adapted to extend through said slots and over the barrel back of the projection to hold said seat against

the muzzle, means for holding said wedge securely in position, means for preventing the removal of said wedge from one of said slots, and an adjustable rear clamp associated with said trough and adapted to contact the barrel at three circumferentially spaced points.



2,448,594
HIGH RESOLUTION MICROSCOPY
James Hillier, Cranbury, and Richard F. Baker, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application May 1, 1947, Serial No. 745,340
17 Claims. (Cl. 250—49.5)

1. A method of forming a highly magnified image of a specimen comprising first subjecting said specimen to a beam of ions in an ion optical system in a manner such as to form an ion image of said specimen at relatively low magnification, recording said ion image on a film adapted to exhibit subsequent opacity to the passage of electrons therethrough varying proportionally to the intensity of the ion beam to which it was previously subjected, and utilizing said recorded image as the object in an electron optical system in a manner such that said recorded image is further magnified.

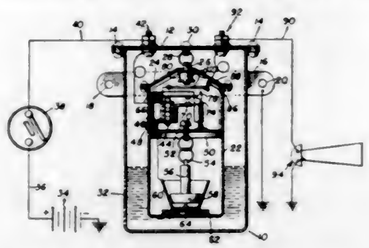


2,448,595
AIR HEATER HAVING REVERTED EXPANDING COMBUSTION CHAMBER
Wallace Holbrook, Los Angeles, Calif.
Application September 16, 1944, Serial No. 554,473
9 Claims. (Cl. 126—116)

1. An air heater comprising: a tubular outer shell open at its ends, a tubular inner shell closed at its ends; radiator elements between said shells; a combustion cone disposed within said inner shell and forming an expanding inner combustion passage, said cone defining with said inner shell an expanding outer combustion passage continuing from the larger end of the inner combustion passage; means forming an inlet for air and exhaust for gases located respectively at the smaller end of said inner passage and at the larger end of said outer passage; and a fuel nozzle

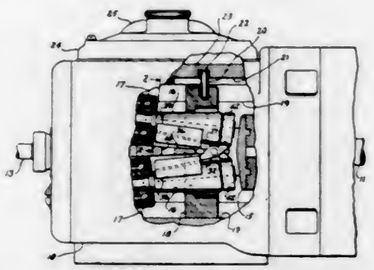
directed into the smaller end of said combustion cone.

2,448,596
FLIGHT COMPUTER
Lewis W. Imm, Glendale, Calif., assignor to Librascope, Incorporated, Burbank, Calif., a corporation of California
Application April 21, 1942, Serial No. 439,874
11 Claims. (Cl. 235—61)



1. In a computer, an air temperature setting means, an altitude setting means, a multiplying mechanism, means to actuate a part of said multiplying mechanism according to the setting of both of said setting means, a true airspeed setting means to actuate another part of said multiplying mechanism, said multiplying mechanism serving as a means to multiply a function of altitude and air temperature by true airspeed, a lever, means to move one end of said lever by said multiplying means, means to move the other end of said lever according to the value set by true airspeed setting means, an indicator and means to operate said indicator from said lever.

2,448,597
AUTO PROWLER ALARM
Leland D. Jolley and Duane L. Jolley, Provo, Utah
Application January 13, 1947, Serial No. 721,804
3 Claims. (Cl. 177—314)

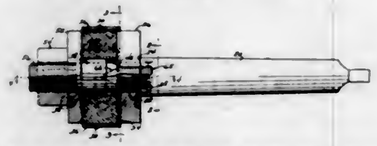


1. A signal device adapted to be used in automotive vehicles, comprising a housing, a receptacle swingingly mounted within said housing, vibration damping means in said housing means

forming, an electrical circuit in said housing and receptacle, sound producing means exterior of said housing and in said circuit, means for intermittently energizing said circuit thereby actuating said sound producing means, said intermittent energizing means including a freely swing-

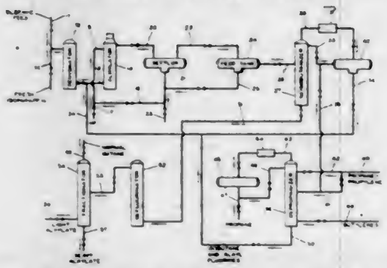
ing pendulum switch in said receptacle, an electro-magnet controlled thereby, a switch closed by said electro-magnet, means for retaining said switch closed for a predetermined interval and means actuated by said switch for actuating said sound producing means.

2,448,598
VARIABLE-SPEED TRANSMISSION
Lloyd E. Jones, Milwaukee, Wis., assignor to Graham Transmissions, Inc., Milwaukee, Wis., a corporation of Delaware
Application November 20, 1946, Serial No. 711,049
12 Claims. (Cl. 74—281)



11. In a variable speed transmission, a rotary carrier provided with a central web having a slot therein, a pair of tapered planetary rollers, the narrow ends of which are mounted on said carrier so as to permit each roller to have angular displacement and rotation with respect to said carrier, the wide ends of said rollers being positioned on opposite sides of said web adjacent said slot, pressure blocks mounted on said wide ends, a ring encircling and engageable with said rollers to regulate the planetary action thereof, a pair of levers having interfitting bearing portions mounted on a single pivot pin carried by said web at said slot, said levers being crossed and having long arms and short arms, said long arms being interposed between the narrow end of a respective roller and said web, said short arms engaging a respective block of a roller mounted on the other side of the web from the side on which the long arm of such respective lever extends, and weights carried by said long arms, said weights being shaped to partially encircle the narrow ends of said rollers and positioned between said narrow ends and said web.

2,448,599
SUSPENDING AGENT FOR BEVERAGES
Karl W. Karnopp, Waukegan, Ill., assignor to The Kalva Corporation, Waukegan, Ill., a corporation of Illinois
No Drawing. Application February 17, 1945, Serial No. 578,553
8 Claims. (Cl. 99—25)

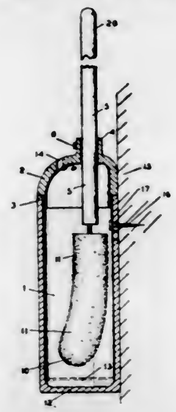


1. A non-settling chocolate flavored beverage including in combination a potable chocolate beverage and a suspending agent consisting of the water soluble extract of Iridophycus.

2,448,600
ADJUSTABLE INTERNAL EXPANSION GRINDER
Spencer R. Keller, Handley, W. Va.
Application January 29, 1946, Serial No. 644,006
5 Claims. (Cl. 51—184.3)

1. A device of the character described, comprising a shaft, a shoulder formed on said shaft, a collar on said shaft abutting said shoulder, a second collar on said shaft segmental grinding elements interposed between said collars, means on said shaft for fixedly retaining said grinding elements between said collars, complementary shaped expanding means positioned intermediately of said grinding elements and means in said first mentioned collar for acting on said expanding means intermediate said elements for adjusting the diameter of said elements.

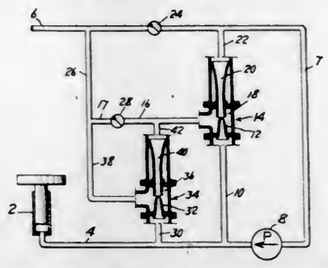
2,448,601
HYDROCARBON ALKYLATION PROCESS
Carl S. Kelley, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application March 4, 1946, Serial No. 651,963
6 Claims. (Cl. 260—683.4)



2. In a process for reacting isobutane with a low-boiling olefin in the presence of a hydrofluoric acid catalyst to produce higher-boiling paraffin hydrocarbons, the improvement which comprises passing liquid hydrocarbon effluents of such a reaction containing dissolved hydrogen fluoride to a first fractional distillation means, removing from said means as a low-boiling fraction substantially all of the isobutane and lighter hydrocarbons contained in said effluents together with said dissolved hydrogen fluoride, passing said lighter fraction to a second fractional distillation means, introducing also

into said second distillation means a propane-propylene mixture containing sufficient propylene to react with said hydrogen fluoride and form propyl fluoride, removing from said second means a low-boiling fraction which is substantially free from hydrogen fluoride and which comprises essentially hydrocarbons lower-boiling than isobutane and contains substantially all of the propane contained in said added propane-propylene mixture, removing also from said second means a high-boiling fraction comprising isobutane and propyl fluoride and substantially free from propane, and passing said high-boiling fraction to an alkylation reaction zone.

2,448,602
GLYCIDYL ESTERS
Ernest B. Kester and Henry M. Preusser, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 21, 1943, Serial No. 499,504
1 Claim. (Cl. 260—348)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



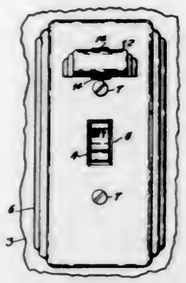
The method of preparing glycidyl esters which comprises reacting an anhydrous alkali metal salt of an acid selected from the group consisting of lauric, myristic, palmitic, stearic, oleic, ricinoleic, linoleic, linolenic, butyric, abietic, elaidic, succinic and sebacic acids, with a molar excess of epichlorohydrin and a minor amount of a substance taken from the group consisting of oxides, hydroxides, and carbonates of alkali and alkaline earth metals under anhydrous conditions at refluxing temperature for a period of about 5 to 9 hours.

2,448,603
SANITARY CONTAINER FOR BRUSHES
Thomas D. Kevin, Oswego, Oreg., and Paul B. Payne, Seattle, Wash.
Application December 11, 1946, Serial No. 715,378
6 Claims. (Cl. 21—83)

1. A device for supporting a cleaning implement, which device comprises a container having an open top, a cap removably seated on the open top of said container, said cap having an opening through the top thereof, a collar extending upwardly from the cap around said opening and adapted to slidably receive therethrough the handle of a cleaning implement, and a gripping member carried by said collar to frictionally engage the implement handle in selectively adjusted position.

2,448,604
PRESSURE SYSTEM
Arthur E. Kittredge, Audubon, N. J.
Application August 30, 1944, Serial No. 551,990
2 Claims. (Cl. 103—11)

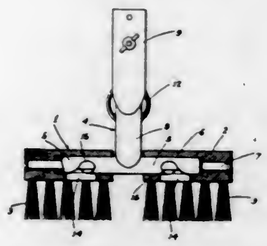
1. In combination with means subject to liquid pressure and attaining a final condition involving substantially no liquid displacement and in which the pressure applied thereto should be maximum, a pump connected to said means to apply pressure thereto, an eductor of the jet pump type having its nozzle receiving liquid from the pump, having its discharge connected to the pump to deliver liquid thereto, and having its throat connected to a supply of liquid, a second eductor of the jet pump type having its nozzle receiving liquid from the pump, having its discharge connected to the throat of the first mentioned eductor, and having its throat connected to a supply of liquid, means including a check valve for supplying liquid from a supply directly to the pump, the check valve being on the supply side of the connection between the discharge of the first mentioned eductor and the pump, and a second check valve between the throat of the first mentioned eductor and the supply of liquid to the first mentioned eductor, the second check valve being on the supply side of the connection between the discharge of the second mentioned eductor and the throat of the first mentioned eductor.



2,448,605
COMPOSITION FOR TREATING COAL AND THE LIKE
Werner E. Kleinicke, Manhasset, N. Y., assignor to The Johnson-March Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 13, 1944, Serial No. 563,321
6 Claims. (Cl. 106—123)

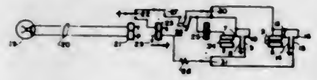
5. A composition for application to coal to allay dusting comprising, in admixture, an unsaturated fatty acid having 18 carbon atoms, a petroleum oil soluble wetting agent, a low viscosity hydrocarbon distillate having a high aromatic component solvent for the said acid and wetting agent and miscible with petroleum oil and in dominating proportion a petroleum oil of the order of Bunker C oil.

2,448,606
ILLUMINATED COVER PLATE
William C. Linton, Washington, D. C.
Application February 19, 1947, Serial No. 729,503
1 Claim. (Cl. 240—2)



In a device of the character described comprising in combination a cover plate having an

opening formed therethrough for receiving an electrical device, said cover plate having an elongated opening formed therethrough, a lamp housing assembly unit comprising a casing, a portion of the casing of said lamp housing being compatible in design with that of the elongated opening within said cover plate as to be inserted therethrough and snugly fit therein, whereby the rays of light from a lamp within said hous-

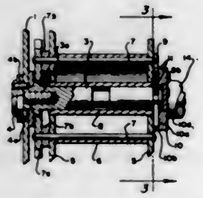


ing may emit therefrom and be projected towards the opening formed within said cover plate receiving the electrical device, laterally extending flanges formed with said lamp housing and engageable with one face of said cover plate, a pair of yieldable walls formed with said lamp housing and a knob formed with each of said walls for engagement with the opposed face of said cover plate.

2,448,607
FOUNTAIN IMPLEMENT WITH PIVOTALLY MOUNTED DUAL BRUSH UNITS
Robert C. Logan, Chowchilla, Calif.
Application June 25, 1946, Serial No. 679,152
1 Claim. (Cl. 15—128)

A dual brush unit comprising a pair of block backed floor brushes disposed in side by side but spaced relation, a tubular T head having opposed legs and a central shank, the blocks having transverse sockets therein open to the inner side edges of said blocks, corresponding legs of the T head relatively rotatably seating in said sockets, the central shank then being disposed between the brushes, means normally preventing separation of the blocks from said legs, means adapted to feed water to the tubular T head, there being registering water delivery openings in the legs and blocks, and a handle secured to said central shank; said separation preventing means being an elongated bolt extending transversely through the blocks and through the legs of the T head.

2,448,608
IMPULSING CIRCUIT INCLUDING A PRE-ENERGIZING CIRCUIT FOR THE IMPULSING RELAY
Clarence E. Lomax, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application December 13, 1945, Serial No. 634,770
9 Claims. (Cl. 179—16)



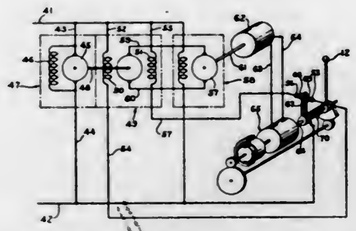
1. In an automatic switch, a stepping magnet having a single armature, a circuit over which a series of impulses are delivered to said magnet, a locking circuit for said magnet, each impulse of a series at times being of insufficient duration to permit complete operation of said armature, a pair of normally open contacts closed by a partial operation of said armature in response to each of said impulses, said contacts closing said locking circuit to insure the complete operation of said armature, said contacts opened in response to the complete operation of said armature and remaining open during the restoration thereof, a pair of normally closed contacts opened by the operation of said armature in response to each of said impulses, and a circuit serially including said normally closed contacts over which said magnet is pre-energized.

2,448,609
COMPOSITION COMPRISING ORGANIC PEROXIDE CURED GLYCOL-DICARBOXYLIC ACID POLYESTER AND RED OXIDE OF IRON
Frank S. Malm, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 30, 1943, Serial No. 485,164
11 Claims. (Cl. 260—40)

11. A reinforced cured elastomer composition comprising an organic peroxide cured glycol-dicarboxylic acid polyester intimately mixed with a finely divided, substantially pure, red oxide of iron made up of spheroidal particles having an average size of the order of 60 millimicrons or less, said polyester having a degree of linear growth indicated by a ratio of ester groups to total ester, hydroxyl and carboxyl groups of at least 98 per cent.

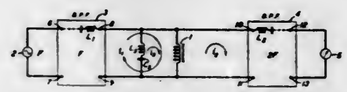
2,448,610
SPOOL LOCK FOR FISHING REELS
Henry I. Mandolf, San Diego, Calif.
Application February 9, 1946, Serial No. 646,514
4 Claims. (Cl. 242—84.1)

1. In a spool lock for fishing reels of the class described a combination of a frame, a shaft in



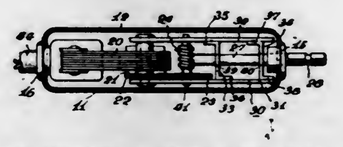
connection therewith extending therefrom and provided with an annular portion circumferentially disposed about the end portion thereof, a spool on said shaft, a cup shaped latch casing secured on said spool, a pair of screws extending through said latch casing and connected with said spool in screw threaded relation therewith, a latch member pivotally mounted in connection with one of said screws and positioned in said annular portion of said shaft and engaging the other of said screws near its extending end.

2,448,611
MAGNETIC BOOKMARK
William Stanley Martin, Sand Springs, Okla.
Application May 14, 1947, Serial No. 747,992
4 Claims. (Cl. 116—119)



4. A book mark comprising a strip of flexible material, and magnets secured under the folded ends and a strengthening strip secured to the first strip near the edges of the folded ends of the strip to be mutually attracted when placed in alignment on opposite sides of the page to be marked.

2,448,612
AIDED TRACKING AIMING MECHANISM
Peter J. McLaren, New York, N. Y., assignor, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y., a corporation of New York
Application October 30, 1943, Serial No. 508,435
9 Claims. (Cl. 318—257)

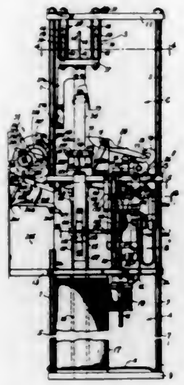


7. In an aiming mechanism including an aimed member, in combination, a driving motor for the aimed member, a control member, biasing mechanism responsive to the position of the control member, speed responsive biasing mechanism energized by the driving motor in accordance with the speed thereof, speed responsive biasing mechanism energized by the control member in accordance with the speed thereof, means controlled jointly by said three biasing mechanisms for determining the speed of operation of the driving motor, limit mechanism for rendering the control member inoperative to influence the motor to drive the aimed member beyond a prescribed limit of movement, and mechanism operated by said limit mechanism to render the speed responsive biasing mechanism which is energized by the control member inoperative to influence the motor to drive the aimed member beyond said limit.

2,448,613
MAGNETIC DETECTOR
Francis G. Merrill, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 16, 1947, Serial No. 748,420
7 Claims. (Cl. 175—183)

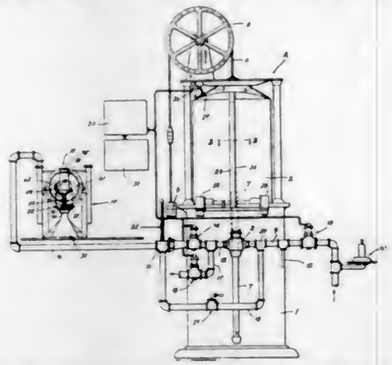
1. In a magnetic detecting system, the circuits comprising a source of alternating current of fundamental frequency, a magnetometer having at least one winding thereon, a filter connecting said source to a winding on the magnetometer, said filter passing most readily only currents of fundamental frequency, utilization means responsive to a selected even order harmonic voltage generated in said magnetometer, a second filter connecting the utilization means directly across a winding on the magnetometer, said second filter passing most readily only currents of the selected even order harmonic frequency, and a frequency selective shunt path connected directly across a winding of the magnetometer, said path passing most readily only currents of third harmonic frequency generated by the magnetometer, whereby the selected even order harmonic output voltage of the magnetometer is rendered less sensitive to changes in the excitation voltage of said source of fundamental frequency.

2,448,614
MOTOR DRIVE FOR BRUSHES AND THE LIKE
Gilbert B. Mirus, Akron, Ohio
Application September 14, 1944, Serial No. 554,082
2 Claims. (Cl. 172—36)



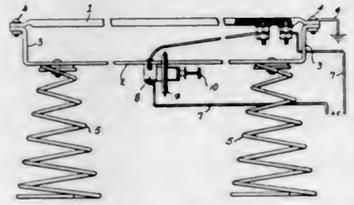
1. The combination with a sectional housing for a motor, a shaft, and power transmitting means between the motor and shaft, of a frame positioned within the housing connected to an end of said motor, comprising spaced parallel walls having apertures forming journals for said power transmitting means, and transverse braces secured between the walls and formed with aligned apertures forming bearing surfaces for the said shaft, said braces each having oppositely extending bases at each end secured to the said walls, to thereby provide a rigid unitary structure with respect to said housing.

2,448,615
SWITCH
Carl E. Mosley, Overland, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a corporation of Missouri
Application February 27, 1946, Serial No. 650,675
14 Claims. (Cl. 200—89)



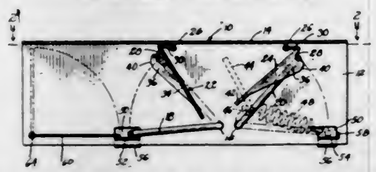
1. In overload disconnecting apparatus, a line switch normally biased toward closing position, a connection in the line and controlled by said switch, said connection including a first main

solenoid, a first electro-thermostatic element, a second solenoid and a second thermostatic element, a first shunt switch operated by the first thermostatic element and a second shunt switch operated by the second thermostatic element, said first shunt switch normally shunting the second thermostatic element and being adapted in response to overload heating of the first thermostatic element to connect said second thermostatic element and to shunt the first thermostatic element and the second solenoid, said second shunt switch effecting a normally open shunt around said second thermostatic element and being operative by said second thermostatic element to close said last-named shunt, overload current from the line in said connection being adapted to operate the main solenoid to apply opening force to the line switch, and said thermostatic elements being adapted in response to said overload current more slowly to operate their respective switches, a detent restraining immediate opening of the line switch in response to said force of the main solenoid, and catches temporarily restraining the detent, one of which catches is operative with time delay from the first thermostatic element and the other of which is operative instantly from said second solenoid and with time delay from said second thermostatic element.

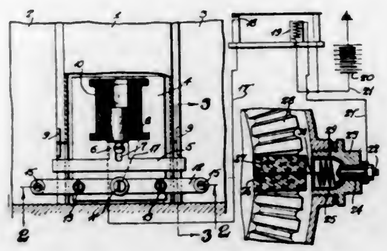


2,448,616
GAS METER PROVER APPARATUS
Thurman Oakley, Bellesville, and Marion J. Westenhaver and Robert E. Eggmann, East St. Louis, Ill., assignors, by direct and mesne assignments, to Electronic Tester of Gas Meters, Inc., St. Louis, Mo., a corporation of Missouri
Application June 19, 1944, Serial No. 541,094
7 Claims. (Cl. 73—3)

1. A meter testing apparatus comprising a prover including a movable bell providing a chamber for a meter-testing medium, piping leading from the chamber of said bell and adapted to be connected to a meter to be tested, an electrically-actuated valve interposed in said piping and operable to control passage of testing medium from the chamber of said bell to the meter being tested, a photo-electric assembly comprising a light source and a photo-electric cell supported in spaced relation with said light source, means electrically associating said valve with said cell so as to control actuation of said valve, and a member movable with said bell in interposed relation with respect to said light source and said photo-electric cell for controlling passage of light from said light source to said photo-electric cell so as to control actuation of said valve in response to operation of said photo-electric cell.



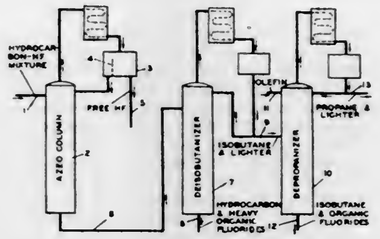
2,448,617
SELF-SUPPORTING, SELF-ADJUSTING ELECTRIC WATERER HEATER
De Witt D. Owens, Crawfordsville, Iowa
Application March 15, 1946, Serial No. 654,762
2 Claims. (Cl. 219—38)



1. The combination with a stock-watering trough arranged in superimposed spaced relation with respect to a supporting surface and supported upon the latter, of a means supporting an electric heater below and exteriorly of the bottom of said trough and resting upon said supporting surface, said means comprising at least one frusto-conical helical spring, the base of said spring resting upon said supporting surface and the apex of said spring urging the heater into engagement with the bottom of said trough.

2,448,618
TRAP
Joshua Patrick, Detroit, Mich.
Application October 4, 1944, Serial No. 557,082
3 Claims. (Cl. 43—82)

2. A trap comprising, a tubular housing having ingress openings in its opposite ends and bottom, a door for alternately opening or closing one end opening and the bottom opening, a pivotally mounted snap arm between the opposite end of said housing and said door, means between the bottom opening and the pivoted point of said snap arm for receiving said snap arm, pivotally mounted latch means for retaining said snap arm in a position spaced from said means for receiving said snap arm, and means for resiliently urging said snap arm into engagement with said snap arm receiving means.



2,448,619
AUTOMATIC ELECTROMAGNETIC AUTOMOBILE DOOR EMERGENCY LATCH
Edward L. Pratt, Pekin, Ill.
Application November 7, 1946, Serial No. 708,345
3 Claims. (Cl. 180—82)

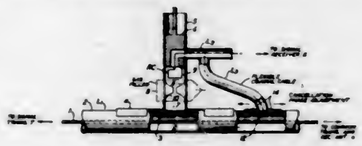
1. In a latching device for the doors of an automobile, hooks on the front and rear doors, a solenoid mounted on the post of the automobile, adjacent the doors of the automobile, a cross bar adapted to be drawn up to engage the hooks when the solenoid is energized, a spring strip electrically connected to the solenoid and having contact screws adapted to engage the post as a door is opened to ground the solenoid, a control switch having a binding post, a relay winding connecting the binding post of the control switch to a battery, a wire spring connected to the binding post, breaker points controlled by said relay winding connected to said solenoid, said binding post being held by and insulated from a plug adapted to fit in a differential housing of the automobile, a cork block connected to the wire spring, said spring adapted to support said cork in close proximity to, but not in engagement with the ring gear of a differential in said housing, and a metal cup contacting the plug and having a hole through which the wire spring passes without contacting the cup when the automobile is at rest, so that when the automobile is in motion, the motion of oil between the ring gear and cork block will cause the wire spring to move into contact with the cup to ground the wire spring and close an electrical circuit through the relay winding to close the breaker points of the solenoid circuit and thereby raise the cross bar to latch the doors.

2,448,620
RECOVERY OF HYDROGEN FLUORIDE BY DISTILLATION WITH AN OLEFIN
George R. Reading and Roy E. Vinyard, Phillips, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application July 17, 1944, Serial No. 545,385
13 Claims. (Cl. 260—683.4)

2. In the alkylation of low-boiling paraffins and olefins in the presence of hydrogen fluoride as the catalyst which comprises the steps of passing a mixture of low-boiling paraffins and olefins into a reaction zone under conditions of alkylation, introducing hydrogen fluoride into said reaction zone, passing a hydrocarbon conversion effluent containing butanes and heavier hydrocarbons and minor amounts of propane and lighter hydrocarbons from said reaction zone to a separator wherein a liquid hydrocarbon phase and a heavier liquid hydrogen fluoride phase are separated, passing said liquid hydrogen fluoride back to said reaction zone, passing said liquid hydrocarbon phase to a fractional distillation, removing an overhead product comprising low-boiling hydrocarbons and hydrogen fluoride, separating said overhead fraction into a liquid hydrocarbon phase and a liquid hydrogen fluoride phase, passing said liquid hydrogen fluoride phase back to said reaction zone, removing a bottom fraction containing a minor amount of hydrogen fluoride from said fractional distillation

and passing same to another fractional distillation, removing an overhead fraction comprising butanes and lighter hydrocarbons with hydrogen fluoride as an impurity therein, removing an alkylate as a bottom fraction from said fractional distillation as a product of the process, passing said overhead fraction to a fractional distillation and removing therefrom a bottom fraction comprising butanes and recycling same to said reaction zone, the improvement which comprises carrying out said last fractional distillation in the presence of an olefin which is present in sufficient amount to react with said hydrogen fluoride contained in said overhead fraction, withdrawing propane and lighter hydrocarbons substantially free of hydrogen fluoride as an overhead product from said last fractional distillation and withdrawing a bottom fraction comprising butanes and hydrogen fluoride in combination with said olefin and recycling the same to said reaction zone.

2,448,621
COMPOSITION CONTAINING TALL OIL RESINS
William J. Rice, Brooklyn, N. Y.
No Drawing. Application April 10, 1945, Serial No. 587,607
9 Claims. (Cl. 106—123)

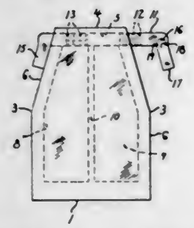


4. A method of making resinous materials adapted for liquid coating compositions which comprises heating talloil to a sufficiently high temperature to cause resinification in the presence of lime, adding thereto a substantial amount of lime, the amount of lime being from 4% to 15% of the mixture, heating said mixture at a temperature between 420° and 525° F. for a sufficient length of time until a sample of said mixture placed upon a glass plate will upon cooling form a hard transparent pill and the material becomes resinous.

2,448,622
LIGHTING TORCH
Floyd R. Rizer, Detroit, Mich.
Application March 4, 1947, Serial No. 732,211
1 Claim. (Cl. 67—6.1)

A lighting torch for oil burners and the like, comprising a tubular jacket having a bore provided with screw threads near its outer end, a long tubular handle secured to the inner end of the jacket and extending axially thereof for a substantial distance, a cylindrical lighting fluid container slidably disposed within the bore and shiftable axially to exposed and covered positions, the container being externally screw threaded near its outer end for engagement with the screw threads of the bore and provided with an externally roughened striking surface inwardly of the external screw threads, the container having a filling opening in its outer end and angularly spaced radial apertures adjacent to the inner end of the striking surface, wicks arranged in the container and extending through the radial apertures, a cap for the filling opening, a spring loaded flint element carried by the sleeve near its outer end and projecting into the bore to resiliently engage the striking surface, a long rod secured to the inner end of the container and extending slidably through the tubular handle, and a knob carried by the free end of the rod for shifting the rod and container axially, the knob engaging the end of the end of the handle to limit the forward shifting of the container.

2,448,623
DUPLEX SWITCH WITH LEAKAGE COMPENSATION
Charles F. P. Rose, Asbury Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 15, 1945, Serial No. 578,073
11 Claims. (Cl. 178—44)

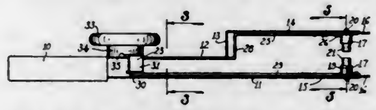


1. In combination, a common line for transmitting at different times high power alternating current signals and relatively low power alternating current signals, a signal receiver, a coupling device normally resonant to the frequency of said low power and high power signals, connecting said receiver to said line, control means connected to said line through a portion of said coupling device, operatively responsive to the energy of the high power signals applied thereto through said device to detune the latter so that the amount of high power signaling energy reaching said receiver is appreciably reduced, said control means being unresponsive to the relatively low power signals applied thereto through said device so that said device is maintained tuned to transmit said low power signals efficiently to said receiver and auxiliary means to provide further protection of said receiver from said high power signals comprising means to continuously abstract sample energy portions of the transmitted signals from said line and means to combine the high power signal components only of the abstracted sample energy portions with the signal output of said coupling device in such manner as to substantially suppress the high power signal leakage through said coupling device when the latter is detuned by operation of the associated control device in response to applied high power signals.

2,448,624
FOUNDRY CORE OR MOLD AND METHOD OF MAKING SAME
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 8, 1943, Serial No. 513,486
5 Claims. (Cl. 22—188)

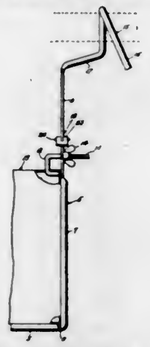
1. A foundry core or mold comprising a comminuted refractory material and a binder consisting of a resinous material having a drop melting point of about 90° to about 160° C. and obtained by the simultaneous heat treatment and air oxidation, in the presence of boric acid, of a material of the group consisting of (1) the residue from the selective solvent refining of FF wood rosin, said residue being characterized by an acid number of 105 to 140, a saponification number of 150 to 170, a drop melting point of 80° to 115° C., an unsaponifiable matter content of 10 to 20%, a gasoline insolubility of 30 to 80%, and a petroleum ether insolubility of 30 to 80%; and (2) the mixture of said residue from the selective solvent refining of FF wood rosin and the substantially petroleum hydrocarbon-insoluble pine wood resin characterized by an acid number of 80 to 110, a drop melting point of 95° to 125° C., a methoxy content of 3 to 7%, and a noncarboxylic hydroxyl content of 5 to 9%.

2,448,625
COMBINATION SALT-AND-PEPPER SHAKER
Thomas W. Ryther, St. Louis, Mo.
Application April 9, 1947, Serial No. 740,438
1 Claim. (Cl. 65—45)



A combination salt and pepper shaker comprising a container divided into compartments and having a solid floor, a perforated closure, stop members on the underside of said closure to prevent its disengagement from said container, said stop members depending from said closure in directions parallel with the end walls of said container, said closure member being provided with a lateral groove at one extremity on its underside and one of said stop members having an extension slidable within said groove to permit of sliding disengagement of said closure and said stop member, and to further permit disengagement of said closure from said container to open said compartments at their upper portions.

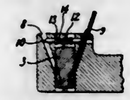
2,448,626
ALKYLOL AMINE SALTS OF HYDROXY FATTY ACIDS AND PROCESS FOR THEIR PREPARATION
Benjamin B. Schaeffer, Upper Darby, Pa., assignor to United States of America as represented by the Secretary of Agriculture
No Drawing. Application December 8, 1944, Serial No. 567,295
10 Claims. (Cl. 260—404)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An alkylol amine salt of a saturated hydroxy higher fatty acid.

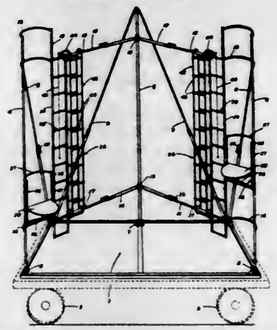
2,448,627
DRESS PATTERN MARKER
Claude Schaffner, New Haven, Conn.
Application June 11, 1946, Serial No. 676,022
11 Claims. (Cl. 120—13)

1. A dress pattern marker comprising means for supporting a pair of crayon holders in opposed aligned relation, and means for rotatably mounting said holders on said supporting means.



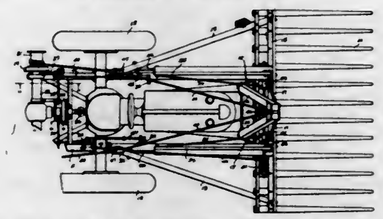
2,448,628
PAINT CAN HANGER
Leo N. Schaller, Corning, N. Y.
Application June 9, 1945, Serial No. 598,515
1 Claim. (Cl. 248—211)

In association with a paint can hanger including a substantially vertical bar, a putty receptacle comprising in combination, an elongated plate forming a tray and having a bifurcated extension at one end thereof, a marginal rim on said tray, and a hinge pin, said pin extending through the furcations of said extension and detachably connecting said tray to said bar.



2,448,629
KNIFE SHARPENER
Benjamin F. Schmidt, Los Angeles, Calif.
Application September 10, 1945, Serial No. 615,271
5 Claims. (Cl. 76—88)

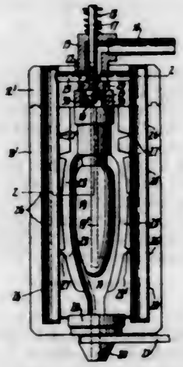
1. In a knife sharpening device, a body member having a top surface, a bore extending from said surface into the body, a slot extending from said surface at one side of said bore, said slot being disposed in a plane intersecting the bore at an acute angle, a cutter comprising a strip of relatively hard material disposed in said bore, said strip having a cross-section of such geometrical shape as to provide a corner projecting into the slot whereby a knife blade disposed in said slot and drawn therealong will engage the



exposed corner of said cutter, said slot tapering from a large width adjacent the top surface of said body to a smaller width adjacent the bottom of the slot, and means extending into said slot for engaging and urging a knife blade disposed in said slot against that wall of the slot most distant from the bore.

2,448,630
FRUIT PICKING TOWER
Robert R. Schutz, Roseville, Calif.
Application September 3, 1946, Serial No. 694,523
9 Claims. (Cl. 304—9)

1. A fruit picking tower comprising a substantially rectangular base, front corner posts upstanding from the base, a central rear post upstanding from the base, diagonal braces extending from the front corner posts to the rear corners of the base, other diagonal braces extending from the central rear post to said rear corners of the base, frame means connecting between each of the front corner posts and central rear post, and a vertically adjustable platform carried by each of said frame means.

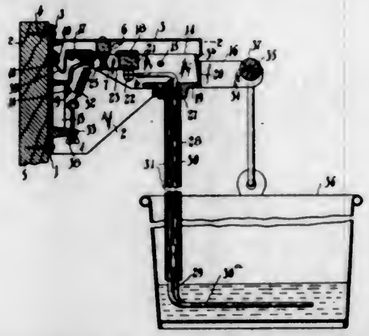


2,448,631
POWER HAY BUCK
Frank L. Selak, Albia, Iowa
Application March 1, 1946, Serial No. 651,063
9 Claims. (Cl. 214—131)

1. A hay stacker structure comprising a pair of boom members pivotally secured to the rear

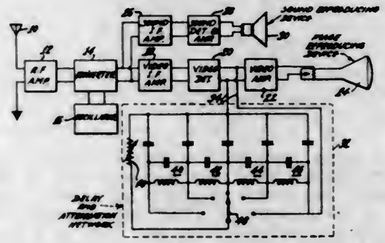
portion of a tractor chassis and extending forwardly of the tractor, a hay rake secured to the forwardly projecting end portions of said boom members, a post structure pivotally secured to the front end of the tractor chassis and normally extending forwardly and upwardly with respect to the tractor, a flexible member connecting the upper portion of said post structure to the hay rake, said post structure being adapted to rotate in a rearward direction in the vertical plane of the tractor to thereby elevate the rake, a ram member slidably mounted for longitudinal movement on said rake and extending transversely thereof, said ram member being adapted to be moved forwardly on said rake to discharge hay therefrom, a power take off device adapted to be driven by the tractor power shaft, a control member for said power take off device, a first cable means connected between said power take-off device and said post structure adapted to rotate said post structure rearwardly when said control member is in a first position, a second cable means connected between said power take-off device and said ram member adapted to move said ram member forwardly when said control member is in a second position, spring means biasing said control member to a third position substantially intermediate said first and second positions, and brake means adapted to lock said first cable means in stationary condition when said control member is in its third position.

2,448,632
SUCTION MOLD
Arthur Edgar Smith, Darling Point, Sydney, New South Wales, Australia
Application July 28, 1943, Serial No. 496,496
In Australia April 11, 1942
17 Claims. (Cl. 49—65)



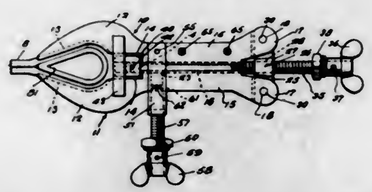
1. A suction mould having a mould cavity therein and comprising at least two separable sections which coact to form a joint when the mould is closed, a suction tube arranged in said joint one at least of said mould sections having a groove into which said suction tube projects when the mould is closed, said suction tube having at least one opening in the wall thereof whereby the interior thereof communicates with said joint, and means forming an air withdrawal passage which communicates with one end of said suction tube whereby the interior of said tube may be placed in communication with a source of reduced pressure.

2,448,633
INSULATED ELECTRICAL CONDUCTOR
Charles C. Smith, Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 23, 1943, Serial No. 491,968
2 Claims. (Cl. 174—124)



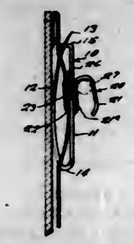
1. An insulated electrical conductor comprising a conductor core, and a single end of cellulose acetate rayon yarn spirally wound with overlapping edges on the core and formed of a multiplicity of continuous filaments held in a uniformly complete group free to spread into a uniform cover with interlocking filaments at the overlapping edges by a low twist in the yarn from .3 to .75 turn per inch.

2,448,634
ELECTRIC HEATING APPARATUS
Elmore Stanley Smith, Weston, Ontario, Canada, assignor to Moffats Limited, Weston, Ontario, Canada
Application November 14, 1947, Serial No. 785,839
In Canada May 20, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires May 20, 1960
9 Claims. (Cl. 219—41)



1. Electric heating apparatus comprising an arm pivoted on a bracket; a switch for connection with an electrical power supply operable by the rocking of the arm for opening and closing the switch; a heating element electrically connected with the switch, the element being adapted to heat the contents of a container when the latter is supported on one end of the arm; means tending to turn the arm on its pivot to cause the switch to be opened when the weight of the container and its contents is less than a predetermined magnitude; and a snap action spring engaging the other end of the arm and the bracket, the said spring being adapted to snap over from one side to another of a dead centre point when the arm is rocked in either direction of rotation to ensure a sharp opening or closing of the switch.

2,448,635
ECHO REDUCING CIRCUIT FOR TELEVISION RECEIVERS
James Ernest Smith, Jackson Heights, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1945, Serial No. 585,688
1 Claim. (Cl. 250—20)

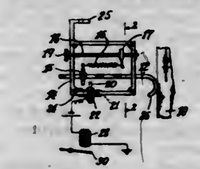


In a television system in which distortion in the reproduced image results from the multipath reception of the transmitted signal, the combination of means for receiving both the desired signal and the reflected signal, a multi-section delay and attentuation network, manually-adjustable means for applying a portion of the received signal selectively to at least one section of said delay and attenuation network, and means for combining the output of said delay and attenuation network with the remaining portion of said received signal, said delay and attenuation network including an adjustable terminating resistor having a maximum value approximately equal to the surge impedance of the network.

2,448,636
CABLE SPLICING VISE
Frank J. Surk, Menominee, Mich.
Application October 18, 1944, Serial No. 559,316
2 Claims. (Cl. 81—17.5)

1. A cable splicing vise comprising a pair of spaced jaw members having shanks forming a recess at the juncture of said jaw members, guide grooves formed longitudinally in the inner surfaces of said shanks, outwardly flared bifurcations integral with said shank opposite said jaw members, a rigid member having a central threaded aperture and reduced opposed ends, pivot pins connecting the reduced ends and said bifurcations, a screw extending through said central aperture and positioned within said guide grooves, a block movably mounted in said recess and having said screw swivelly connected thereto, guide means attached to said block and slidably associated with the outer surfaces of said jaw members, and a clamp secured to said shanks for holding said jaw member in a selected position.

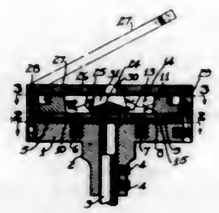
2,448,637
DRAPERY HOOK
Eva C. Swanson, Detroit, Mich., assignor to Ethel Swanson, Detroit, Mich.
Application June 23, 1944, Serial No. 541,809
3 Claims. (Cl. 24—86)



1. A drapery hanger comprising a base having a series of longitudinally spaced apertures, a hook having supporting means and an attaching arm insertable through a pair of adjacent apertures of said base, said attaching arm having a straight portion and a pointed extremity extending at an angle to said straight portion, said extremity extending into one of said apertures in said base, through said drape at two points and projecting outwardly through an adjacent aperture in said base.

2,448,638
HEAT-SEALING ADHESIVE TAPE
Thomas F. Murray, Jr., and George F. Sharrard, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application October 1, 1943, Serial No. 504,640
4 Claims. (Cl. 117—122)

1. A heat-sealing adhesive tape comprising a support coated with a condensation product prepared by mixing one molecular proportion of melamine with three molecular proportions of aqueous formaldehyde at pH 7 and a temperature of 80° C. and adding the resulting aqueous condensation product to an aqueous water soluble organic solvent solution of a partially hydrolyzed homopolymer of vinyl acetate containing an acetate group content equivalent to from 65 to 90 per cent by weight of homopolymeric vinyl acetate, the melamine constituting from 8 to 20 per cent by weight of the partially hydrolyzed homopolymeric vinyl acetate.

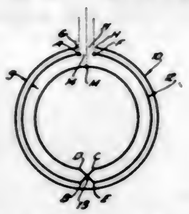


2,448,639
FABRIC CONTACTING CIRCUIT CLOSER FOR KNITTING MACHINES
Michael Wachsman, Brooklyn, N. Y.
Application August 10, 1946, Serial No. 689,735
1 Claim. (Cl. 66—166)

A fabric contacting circuit closer for knitting machines comprising a box, a detector slidably supported in the box, a spring in said box secured to said detector for holding the same in normal frictional contact with the fabric, a

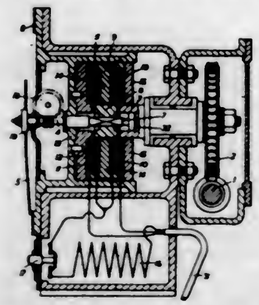
normally open electric stop circuit for the knitting machine, a fixed contact in said circuit supported in the said box, a contact member carried by said detector and adapted to engage the said fixed contact to close the said circuit when an abnormal condition in the fabric causes a termination of the said normal frictional contact between the detector and the fabric and means in the said box for regulating the tension of the said spring, said means comprising a spring tension regulating member secured to said spring, a shaft in threaded engagement with said member to actuate the same and a knob on said shaft for operating the later from outside the said box.

2,448,640
WAX CASTER
Cornelius F. Weston, Santa Monica, Calif.
Application April 13, 1946, Serial No. 662,015
5 Claims. (Cl. 18—26)



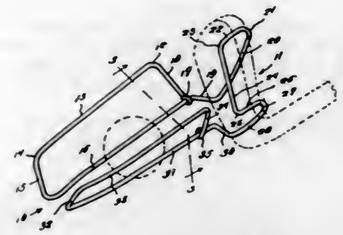
1. In a wax casting device, a housing, a mold holder carried by said housing, a plurality of rubber molds radially held in said holder, a cavity in the center of said holder, ports in said molds to provide a passage from said cavity to the cavity in said mold, spring means exerting pressure on one side of said molds, a cover on said housing against which said spring means compress said molds.

2,448,641
ALKYLATION OF CYCLIC UNSATURATED HYDROCARBONS USING ALKALI METAL CATALYST
Gerald M. Whitman, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 27, 1946, Serial No. 650,729
12 Claims. (Cl. 260—666)



1. A method for the preferential alkylation of cyclic hydrocarbons on methylene and alkyl groups alpha to a ring double bond which comprises bringing into contact in a reaction zone an alkali metal catalyst, a monoolefin hydrocarbon and a cyclic hydrocarbon having at least two hydrogens on a carbon atom which is directly attached by a single bond to a nuclear carbon atom which in turn is attached by a double bond to another nuclear carbon atom, and selected from the class consisting of aromatic and hydroaromatic hydrocarbons, heating the mixture of hydrocarbons and alkali metal catalyst in said reaction zone at a temperature of 150° to 450° C. under superatmospheric pressure of 50 to 3000 atmospheres, collecting the reaction products and isolating therefrom an alkylated cyclic hydrocarbon formed by condensation of the olefin with the cyclic hydrocarbon on a group alpha to the ring double bond as aforesaid.

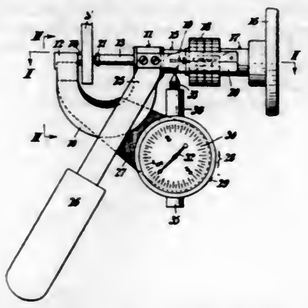
2,448,642
TUNER
Frank Wilburn, Burbank, Calif.
Application March 3, 1947, Serial No. 731,937
2 Claims. (Cl. 171—777)



1. A tuner embodying a pair of coaxial coils, one of substantially one turn and one of substantially two turns, arranged for relative rotation on their common axis; said one-turn coil comprising a substantially 360° ring in a plane at right angles to the coil axis, said ring having a split forming an air gap therein; said two-turn coil comprising a substantially 360° ring in a plane parallel to the first mentioned plane, said ring being slotted to form two end portions, and two substantially 180° ring segments in a third plane parallel to the other two planes and close-spaced to the first mentioned plane, said ring segments being arranged with gaps between opposed ends thereof, and cross-over connections between the end portions of the 360° ring portion of the two-turn coil and the adjacent ends of the 180° ring segments.

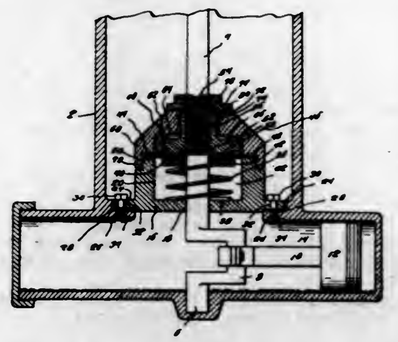
2,448,643
REVOLUTION COUNTER ADAPTED TO OPERATE OVER VARIABLE PREDETERMINABLE PERIODS OF TIME
Herbert Cornelius Wilkins, Dalton-in-Furness, England, assignor to Vickers-Armstrongs Limited, London, England, a company of Great Britain
Application November 19, 1943, Serial No. 510,897
In Great Britain December 2, 1942
2 Claims. (Cl. 235—104)

1. A revolution counter adapted to be effectively connected to, and disconnected from, the rotary means the revolutions of which are to be counted over a given period of time, comprising a graduated counter to display the number of revolutions of the said rotary means made over the selected period, a spindle driving the counter, a further spindle adapted to be driven from the said rotary means, a reduction gear to connect said latter spindle to the rotary means, an electro-magnetic clutch interposed between the two spindles adapted to effect momentarily the effective connection and disconnection of the two spindles, an armature of said clutch in slidable and positive driving connection with said first-mentioned spindle, a pair of co-axial coils of said clutch spaced apart and disposed about said armature, a housing accommodating the clutch and spindles, a relatively fixed clutch face in said housing adapted to be engaged by said armature to arrest rotation of the first-mentioned spindle, a clutch face associated with the second-mentioned spindle adapted to be engaged by the armature to effectively connect the two spindles, and means to alternately connect the two coils to a source of electrical energy, the arrangement being such that the operative displacement of said armature eliminates any measurable lag or lost motion between the said rotary means and the spindle driving the counter.



2,448,644
GOLF BALL RETRIEVER
Ray C. Williams, Holland, Ohio
Application December 14, 1945, Serial No. 635,018
1 Claim. (Cl. 294—19)

In an attachment for golf clubs and the like, the combination, which comprises a pair of juxtapositioned elongated substantially rectangularly-shaped wire loops with the lower strands thereof extending from the ends of the loops, and diagonally backward from a plane in which said lower strands are positioned, then upward at an angle of substantially 90°, and then over toward the loops with arcuate extensions providing a clip and having a bar joining the ends of said arcuate extensions.

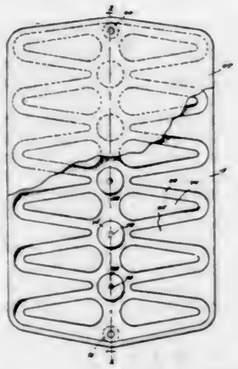


2,448,645
HARDNESS TESTER
William A. Williams, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 30, 1945, Serial No. 607,681
6 Claims. (Cl. 73—81)

1. A hardness tester comprising a flexible yoke with an anvil on one of its extremities, and a screw spindle with a penetrating point rotatably adjustable in the other extremity for engaging opposite faces of the specimen to be tested, said spindle having circumferential graduations for direct reading of the degree of penetration by coordination with a marker on the yoke; a lever arm with one end thereof rigidly secured to the end of the spindle-carrying extremity of the yoke and otherwise free; an indicator on the lever arm influenced by flexure of the yoke as the load is applied to the test piece by the screw spindle, said indicator having a point contact plunger in yielding lateral engagement with the spindle-carrying extremity of the yoke, and a

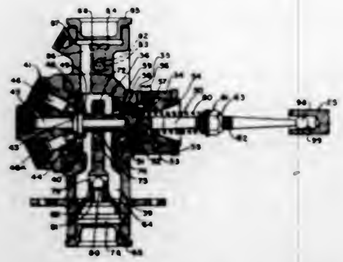
pointer actuated by the plunger and coordinative with a scale graduated in terms of load units.

2,448,646
BEARING SEAL
John M. Wisniewski, Prattsburg, N. Y.
Application May 7, 1946, Serial No. 667,911
2 Claims. (Cl. 286—11)



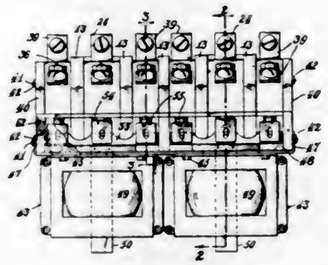
1. A fluid seal comprising a shaft rotatable in a housing having a bore, a flanged member carried by said shaft and rotatable with the shaft in said bore, said bore being enlarged to form a shoulder, said flanged member having on its flange an upstanding first annular ridge bearing against said shoulder to form a tight seal, said flange having on its lower surface a depending second annular ridge, an annular flexible sealing washer having its rim clamped in said housing to form a tight seal between said washer and the housing, said sealing washer having an axial aperture through which said shaft extends and being so arranged that its upper surface bears against said second annular ridge, pressure plate means for pressing an intermediate portion of said sealing washer upwards against said second annular ridge to form a tight seal, a spring disposed in said enlarged bore with its lower end resting on the floor of the bore and with its upper end pressing against said pressure plate biasing it upwards against said sealing washer to maintain a tight seal as said shaft rotates, and means acting against the flanged member and sealing washer for tightly sealing the shaft to the housing.

2,448,647
CALLING DEVICE
Fredric E. Wood, McHenry, Fred Gienger, Highland Park, Erik Decker, Chicago, and Robert L. Sargisson, Berwyn, Ill., assignors to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 30, 1946, Serial No. 706,608
5 Claims. (Cl. 179—90)



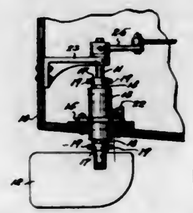
1. In an impulse sending device, a die-cast casing, a number plate, a number plate spring having bent over ends for holding said number plate on said casing, a driving spring for transmitting motion, a driving spring tension plate having lugs for holding said driving spring, ears on said driving spring tension plate extending through holes in said casing and said number plate spring for assembling said number plate spring, said casing and said driving spring tension plate; a hub extending through a hole in said number plate spring, a hole in said casing and a hole in said driving spring tension plate; said driving spring tension plate being force-fit on said hub, a shoulder on said hub abutting against said number plate spring, and a ringstake pressed from said hub against said driving spring tension plate to firmly clamp said casing between said spring tension plate and said number plate spring.

2,448,648
SOLAR WATER HEATER
Ernest E. Zideck, Pontiac, Mich., assignor of one-half to Clinton L. Stockstill, Wayne County, Mich.
Application September 8, 1944, Serial No. 553,259
2 Claims. (Cl. 257—256)



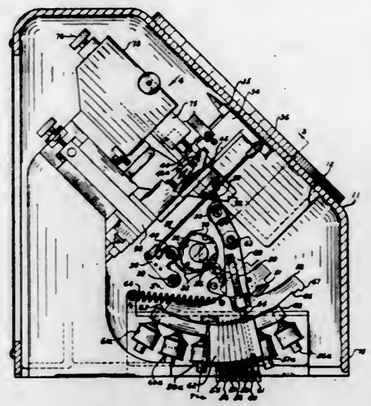
1. A solar water heater unit comprising a plate-like member having an inner surface provided with a depressed channel formation therein, said channel formation comprising a vertically extending medial passageway extending from end to end of the unit and horizontally disposed V-shaped channels projecting laterally from opposite sides of said medial passageway and extending from end to end of the unit, the channels at intervals throughout the length thereof communicating directly with said medial passageway, tapered islands formed coincidentally within and defining some of the wall portions of said channels with intervening alternate pointed peninsulas defining the opposite wall portions of said channels, said islands and said peninsulas together defining a multiplicity of communicable openings between said channels and said medial passageway, circular islands formed within said medial passageway at the communicable openings of the channels with said medial passageway, a complemental plate-like covering member attached to said first-mentioned plate-like member and at intervals throughout the area thereof to said circular islands, water inlet means provided at one end of the unit communicable with the adjacent ends of the channels and the adjacent communicable end portion of the medial passageway, and water outlet means provided at the opposite end of the unit and communicable with the adjacent portions of said channels and the adjacent end portion of said medial passageway.

2,448,649
DUPLEX FOUR-WAY VALVE
Harold W. Adams, Santa Monica, and Orville A. Wheelon, Pacific Palisades, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application April 17, 1944, Serial No. 531,390
6 Claims. (Cl. 251—18)



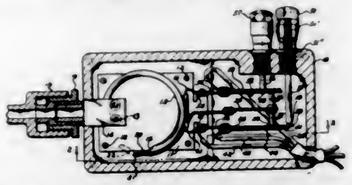
1. In a control valve of the character described, the combination of: a hollow body having spaced walls, one of said walls having an interior concave spheroidal face with port means therein, and the other of said walls having an opening opposite said face; a swingable member extending through said opening into said body, having on the inner portion thereof a closure member for sliding engagement with said face; a spherical shoulder carried by said swingable member; means sleeving said swingable member slidably mounted in said opening; a concave spherical seat formed on said sleeving means for receiving said shoulder and cooperating therewith for supporting said swingable member for universal movement whereby said closure member may be moved relative to said spheroidal face; adjustable means engaging said sleeving means for positively holding said seat against said shoulder and said swingable member in a position in which said closure member is maintained in good sealing engagement with said spheroidal face; and means forming a seal between said swingable member and said opening.

2,448,650
ELECTRIC CONTROL SWITCH
William J. Aitken, Manitowoc, Wis.
Application March 22, 1944, Serial No. 527,580
1 Claim. (Cl. 200—104)



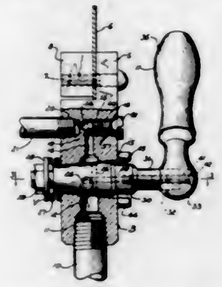
In a switch including electromagnetically operable means disposed below a lateral support and having a movable armature and an actuator movable by said armature, a block of electrically non-conductive material mounted on said support, said block being formed to provide a vertically disposed rear wall carried on said support, a top wall formed integrally with said rear vertical wall and spaced above said support and having an integral comparatively short depending front wall to provide a hooded arc chamber beneath said top wall, said actuator extending upwardly above said support, end plates of electrically non-conductive material mounted at opposite ends of said block and closing opposite ends of said arc chamber, means for removably securing said end plates to said block, a pair of stationary terminal contacts within said arc chamber, and an electrically connected pair of movable contacts within said arc chamber above said support yieldably carried on an electrically non-conductive bar which is connected with and movable by said actuator whereby said movable contacts are moved into make and break contact with said stationary terminal contacts, said bar having an intgeral extension providing a vertical closure wall disposed below and partially overlapping said depending front wall and being movable relatively to said front wall, said bar and said vertical closure wall cooperating with said front wall to complete the enclosure of said arc chamber.

2,448,651
NOISELESS RUDDER POST BEARING
Evender S. Aker, West Point Pleasant, N. J.; Florence L. Aker executrix of said Evender S. Aker, deceased
Application May 15, 1945, Serial No. 593,837
3 Claims. (Cl. 114—169)



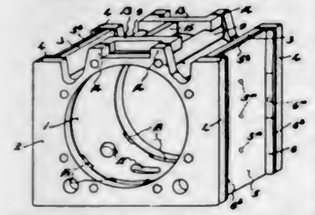
1. The combination with a boat bottom of a metallic rudder post bearing affixed thereto and therethrough, whereby the lower portion thereof projects exteriorly into the water, a rudder post, means within the boat to suspend said rudder post for downward extension through the axial bore of said bearing, said bore substantially exceeding in diameter the diameter of said rudder post, a pair of opposed journal members mounted on said rudder post, said journal members being respectively entered in opposite ends of said bearing body bore, each said journal member comprising an internal metallic sleeve slidable on said rudder post, each metallic sleeve terminating at its outer end in an annularly enlarged collar portion, and an external sleeve of rubber bonded to each internal metallic sleeve, said rubber sleeves having external diameters corresponding to the internal diameter of said bearing body bore so as to engage and turn in contact with the walls thereof, the collar portions of said journal members having means to releasably secure the latter to said rudder posts, and packing material intermediate the rudder post and the walls of said bearing body and to which inner ends of said journal members are opposed, said journal members being relatively adjustable axially to compress said packing material therebetween.

2,448,652
APPARATUS FOR ARRANGING, GAUGING, AND ASSORTING ARTICLES ACCORDING TO SIZE
Willis Fay Aller, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application November 10, 1944, Serial No. 562,777
3 Claims. (Cl. 209—88)



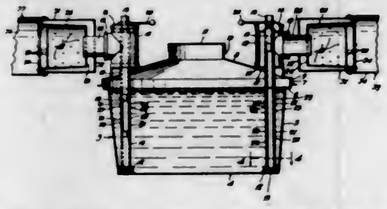
1. A gauging device comprising a holder for articles to be gauged, means for arranging the articles to be gauged in an advancing line, feeding means for periodically moving an article from the advancing line to a gauging station, gauging means at the gauging station, a series of electric switches operated by said gauging means for gauging different dimensions of the articles, a series of article receivers, a pivoted selector arm having a conduit for carrying the articles from the gauging station to a selected receiver, cam means for swinging said arm to carry the end of said conduit along the series of article receivers, and a series of solenoid operated stops controlled by said switches for arresting the swinging movements of said arm, and power means for driving said cam means, said arranging means and said feeding means in timed relation.

2,448,653
SIZE GAUGING DEVICE
Willis Fay Aller, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application April 10, 1946, Serial No. 660,901
4 Claims. (Cl. 73—37.5)



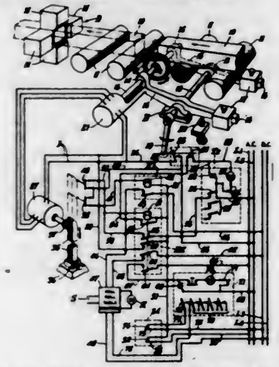
1. In a precision gauging apparatus for gauging the size of an object by measuring the amount of air leakage supplied under pressure through a gauging nozzle or nozzles cooperating with the object, in combination, a gauging nozzle for cooperation with the object to be gauged, a pressure responsive curved tube having a fixed end and having a closed free end which has expansive movement in a plane in accordance with pressure changes, a support for the fixed end of said tube, means placing the fixed end of said tube in communication with said nozzle, a rigid arm fixedly secured at one end thereof to the free end of the tube and projecting from the tube to a remote location so the remote end of the arm moves in accordance with the movement of the free end of the tube, a rigid switch blade at each side of said arm, a flexible spring blade at each side of said arm biased to contact with its respective rigid blade and movable from its respective rigid blade by said arm, means fixed with respect to said support for carrying said blades, and means for independently adjustably setting said rigid blades to precisely located positions.

2,448,654
HIGH-LOW GAS VALVE
Harry W. Anderson, Chicago, Ill.
Application June 4, 1947, Serial No. 752,425
5 Claims. (Cl. 277—64)



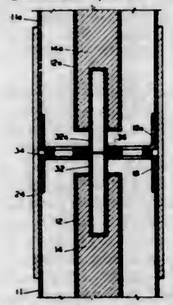
1. A gas valve having a body through which is a passageway in connection with an inlet and outlet and a tapered opening traversing the body and intersecting the passageway therethrough, a tapered valve plug rotatably fitted in the tapered opening and provided with a pair of angularly-related transverse ports therethrough, one large and the other small, each adapted separately in one rotative position of the plug to establish communication with the passageway and in a second rotative position to disestablish communication with the passageway, the valve plug being axially extended exteriorly of the body in the form of a stem, a handle fitted non-rotatably to the stem for operation of the valve plug, limit stops engageable with the handle to confine its operative movements to a range between the two positions of the plug above noted, there being formed in the plug an axial bore communicating with the smaller transverse port and extending therefrom to the outer end of the stem, screw threads formed within the axial bore, a regulating screw within the bore coacting with the screw threads therein adapted, upon rotation, to advance toward or recede from the inner end of the bore, whereby to open or close the smaller transverse port in varying degree, and a lock screw within the bore having a head exteriorly thereof in engagement with the handle, the lock screw coacting with the screw threads of the bore to secure the handle against axial displacement from the stem.

2,448,655
AXLE BOX
Cedric Albert Bowen, Aston, Birmingham, England, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application July 20, 1945, Serial No. 606,134
In Great Britain March 2, 1945
13 Claims. (Cl. 308—39)



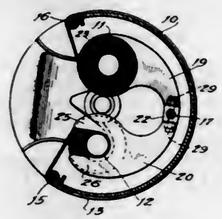
1. A built-up welded axle box comprising an internal tubular barrel unit, an outer box-like frame composed of separate plate members welded together and permanently attached to the barrel unit to form a body unit, and a plurality of longitudinally-extending gusset plates disposed in longitudinal planes above and below the axis of the axle box and welded at their inner and outer edges respectively to the said barrel unit and to the outer frame.

2,448,656
MULTIPLE ORCHARD BURNER
James L. Breese, Santa Fe, N. Mex., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application August 12, 1943, Serial No. 498,279
8 Claims. (Cl. 158—91)



1. In a vaporizing burner, a vaporizing container adapted to hold a substantial body of liquid fuel, a burner, including a burner pot, a connecting tube extending between the burner pot and the vaporizing container and adapted to direct vaporized fuel from the container to the burner and an air inlet tube extending through said connecting tube and adapted to direct outside air toward the surface of the liquid fuel in the container at a point adjacent the inlet end of said tube.

2,448,657
FULLY AUTOMATIC DESURFACING CONTROL SYSTEM
James H. Bucknam, Cranford, N. J., assignor to The Linde Air Products Company, a corporation of Ohio
Application August 28, 1945, Serial No. 613,183
4 Claims. (Cl. 266—23)



1. In an automatic control system for thermally treating a metal body on a conveyor, the combination comprising, detector means including a wheel operable by the body as it is advanced by the conveyor, means including a switch responsive to the operation of said detector means for changing the speed of the advancing movement of said body, and means including a Selsyn system driven by said wheel so as to be responsive to the advancing movement of the body at such speed for adjusting such movement for starting treatment when the body is in proper position for starting the thermal treatment thereof.

2,448,658
METHOD FOR MAKING EXPLOSIVE ASSEMBLIES
Claude H. Carey, Rush Township, Schuylkill County, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application March 2, 1946, Serial No. 651,563
3 Claims. (Cl. 86—31)

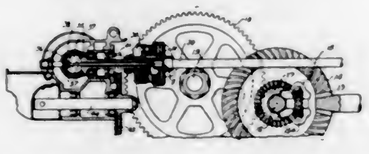
1. A process for the manufacture of explosive assemblies which comprises arranging, in an upstanding communicating series, shells having exit and entrance ports, pouring melted explosive into said series, then, after cooling said series until said explosive solidifies, separating a shell not filled with solidified explosive from said series, placing said unfilled shell at the bottom of a subsequent series, and repeating the process.

2,448,659
DEVICE FOR WINDING HECTOGRAPH ROLLS EVENLY
William J. Champion, La Grange, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application April 26, 1944, Serial No. 532,862
8 Claims. (Cl. 101—132)

1. In a duplicating machine having a platen, a gelatin band extending across the face of said platen, a spindle adjacent one end of the platen on which one end of the gelatin band is mounted, a second spindle adjacent the other end of the platen on which the other end of the band is mounted, said spindles being mounted for rotation so that the band may be drawn across the platen and wound on one spindle as it is unwound from the other, means to prevent spiraling of the band on the spindles, comprising a bifurcated plate mounted in a plane substantially perpendicular to the axis of one spindle adjacent one end thereof in position to engage the edge of the band wound thereon, a second bifurcated plate mounted in a plane substantially perpendicular to the axis of the other spindle adjacent the other end thereof in position to engage the other side edge of said band, the spindles being received between the bifurcations of said plates.

2,448,660
PREPARATION OF ETHER ACETALS
Willard J. Croxall, Bryn Athyn, and Harry T. Neher, Bristol, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application October 30, 1947, Serial No. 783,210
6 Claims. (Cl. 260—615)

1. A process for preparing ether acetals which comprises reacting at 0° C. to 75° C. in the presence of a mercury catalyst and a strongly acidic catalyst a vinyl ester of a saturated monocarboxylic acid of two to four carbon atoms and an ether alcohol of the formula



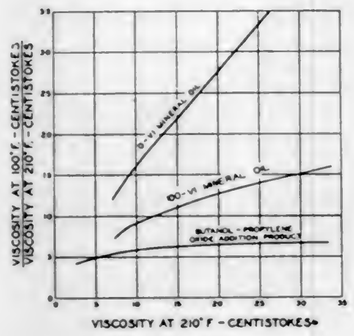
$$R'(OR'')_xOH$$

wherein R' is a hydrocarbon group, R'' is an alkylene group of two to three carbon atoms, and x is an integer from one to twelve, destroying the acidic catalyst in the reaction mixture, and separating therefrom an ether acetal.

2,448,661
METHOD OF PREPARING PARASITICIDES CONTAINING ALUMINUM HYDROXIDE
Homer L. Cupples, Alexandria, Va.; dedicated to the free use of the People in the territory of the United States
No Drawing. Application September 28, 1944, Serial No. 556,242
1 Claim. (Cl. 167—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process of preparing parasiticides comprising the mixing of xanthone, a vegetable gum, aluminum sulphate, water, and ammonium hydroxide, the latter three ingredients being in the proportion of about 60 milliliters of 10% aluminum sulphate, to about 2835 milliliters of water, to about 55 milliliters of ammonium hydroxide (specific gravity 0.90 diluted from one to ten volumes), thereby precipitating aluminum hydroxide in situ.

2,448,662
POWER TAKEOFF
Frank Douglas Dale, Coldwater, Kans., assignor to Harry Ferguson, Inc., Dearborn, Mich., a corporation of Delaware
Application January 25, 1945, Serial No. 574,530
6 Claims. (Cl. 74—11)



1. A power-take-off unit assembly for use on tractors with a transmission case having an opening at the rear end and provided with a rearwardly extending propeller shaft which is directly connected with the crank shaft and independent of the tractor transmission shaft and clutch, said assembly comprising a housing boltable to said open rear end, a power-take-off shaft supported in said housing and carrying on its end and arranged to be supported upon and driven by the end of the propeller shaft a second clutch provided with driving and driven members, means for affording packing pressure to the members and means for releasing said packing means, said means including connections passing longitudinally through the said power-take-off shaft and devices by which said connections may be operated to release the clutch.

2,448,663
COMPOSITE SHOE PLATFORM
Fred J. Diamant, New York, N. Y.
Application November 29, 1945, Serial No. 631,546
1 Claim. (Cl. 36—30)

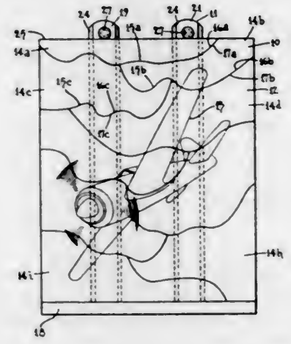
A composite shoe platform comprising an upper layer of hard felt, a lower layer of fiber board, and an intermediate layer of felt padding, united to form a composite unit.

2,448,664
POLYOXYPROPYLENE COMPOUNDS
Harvey R. Fife, Mount Lebanon, Pa., and Frederick H. Roberts, Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
Application May 30, 1944, Serial No. 538,098
6 Claims. (Cl. 260—615)

3. Compositions of matter having lubricating properties predominantly comprising liquid, water-immiscible monohydroxy 1,2-polyoxypropylene monoethers having an average molecule weight by acetyl values between 1000 and 3000, said monoethers being obtained by adding propylene oxide to a heated body of a liquid acyclic alkanol having from 1 to 20 carbon atoms and containing an alkaline catalyst at such a rate as to maintain a substantially uniform concentration of unreacted propylene oxide in the reaction zone, said monoethers being further characterized by having a viscosity of at least about seven centistokes at 210° F. and being further characterized by their ratio of kinematic viscosity at 100° F. to their kinematic viscosity at 210° F. being less than 6.6, by thermochemical stability at 500° F., and by pour points lower than —20° F.

2,448,665
LOW-TEMPERATURE NONCRYSTALLIZING DDT-ALKYLATED NAPHTHALENE INSECTICIDE
Elmer E. Fleck, Silver Spring, and Robert K. Preston, Cumberland, Md.; dedicated to the free use of the People in the territory of the United States
No Drawing. Application June 22, 1945, Serial No. 601,054
1 Claim. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An insecticidal composition which will remain free from crystal formation of DDT at all temperatures between about —20° F. and 140° F. comprising a solution of about from 95 to 80 parts, by weight, of a kerosene mixture of DDT and about from 5 to 20 parts, by weight, of substantially pure alkylated naphthalenes, said kerosene mixture containing about from 3 to 10 percent DDT.

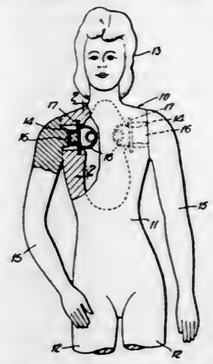


2,448,666
POLYETHYLENE-POLYVINYL ACETAL COMPOSITION
David A. Fletcher, Pompton Plains, and Malcolm M. Renfrew, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 14, 1944, Serial No. 540,314
6 Claims. (Cl. 260—45.4)

1. An article having an at least semi-rigid surface, said surface bearing a coating essentially composed of a uniform mixture of 10 parts of a polyvinyl acetal resin of the composition:

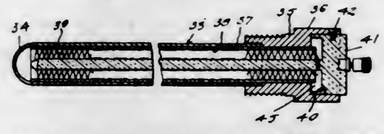
	Per cent
Ester content as polyvinyl ester	Up to 10
Hydroxyl content as polyvinyl alcohol	Up to 30
Acetal content as polyvinyl acetal	Above 60

and 5–20 parts of polyethylene having a molecular weight above 6,000.



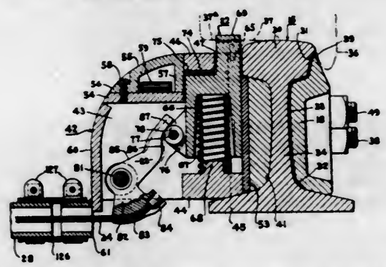
2,448,667
JIGSAW PUZZLE AND RACK THEREFOR
Sheldon H. Gainsley, Minneapolis, Minn.
Application November 30, 1944, Serial No. 565,817
3 Claims. (Cl. 273—157)

2. A puzzle comprising a number of complementary pieces having meandering edges adapted to fit the edges of other pieces, said pieces being adapted to be assembled to form a composite figure, a rack including a rack bar, a dovetailed tongue on said rack bar, and dovetailed grooves formed in said pieces and adapted to receive said tongue to hold the pieces in assembled relation.



2,448,668
JOINTED MANNEQUIN DOLL
Max Geller, Brooklyn, N. Y.
Original application September 22, 1942, Serial No. 459,233. Divided and this application January 26, 1945, Serial No. 574,708
1 Claim. (Cl. 46—173)

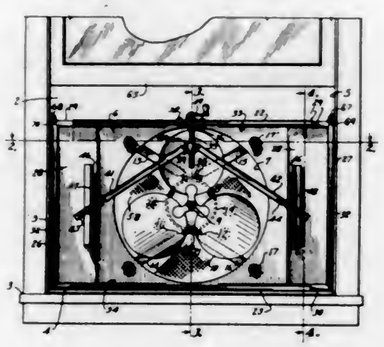
In a doll having a hollow body with a round opening therein, a keeper ring securely mounted in said opening and concentric relative thereto, the interior diameter of the ring being less than the diameter of said opening, a member having a reduced projection extending into said opening, and a spring loop member larger than the inside diameter of said ring, carried by said reduced projection and extending through the opening in the keeper ring and having interlocking



engagement with the inner peripheral edge of the ring member.

2,448,669
ELECTRIC HEATER FOR TANKS
Thomas F. Green, Jr., Ormond Beach, Fla.
Application December 22, 1945, Serial No. 636,816
1 Claim. (Cl. 219—38)

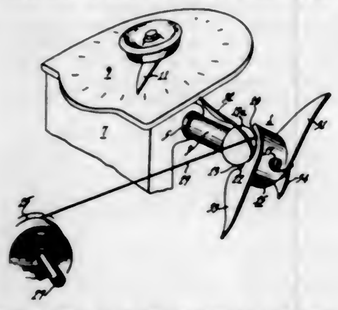
A tank heater comprising a tubular housing for extension into a tank, a closed inner end on said housing, a ceramic core loosely disposed in said housing and formed with a plurality of circumferentially spaced apart bores, a resistance coil loosely disposed in said bores, a plug in the outer end of said housing, said plug formed with an annular recess on the inner end thereof adjacent the outer end of said core, a pair of terminals carried by said plug extending therethrough and into said recess and connected to said coil, and means removably securing said plug in said housing.



2,448,670
RAIL LUBRICATOR
Warren C. Heidenthal, Middletown, N. Y., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application March 17, 1944, Serial No. 526,894
10 Claims. (Cl. 184—3)

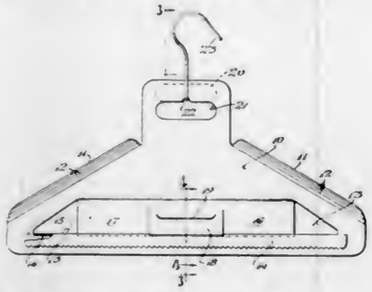
8. In a track lubricator, a track having a lubricant-applying device, a lubricant tank, delivery

apparatus for transferring lubricant from said tank to said applying device, a reciprocable plunger member mounted on said track to be engaged by wheels running on said track, a drive member operatively connected to said delivery apparatus, an operating mechanism between said operating member and said driven member for driving the latter, said operating mechanism including a cam element and a roller in engagement therewith, said cam element being movable with said driven element, said roller being journaled on said plunger member, said cam element having a fall portion and a dwell portion, said roller moving along said fall portion with the first part of movement of said plunger member caused by a car wheel, said roller moving along said dwell portion with further movement of said plunger member beyond said first part movement, whereby said operating mechanism transmits said first part movement of said plunger member to said driven member and does not transmit said further movement of said plunger member to said driven member.



2,448,671
FRAME STRUCTURE FOR VENTILATING FANS
Paul E. Hord, Tebbetts, Mo.
Application March 10, 1947, Serial No. 733,600
5 Claims. (Cl. 98—94)

1. A frame for a window ventilating fan comprising, top, bottom and side members forming a housing having a central opening, means for supporting the fan in the housing coaxial with said opening, a pair of extension panels slidably connected with the respective sides of said housing, a threaded rod rotatably carried by and depending from the top member of said housing, a threaded collar on said rod, and links connecting said collar with said panels, whereby said panels are extended on said housing so that their outer side edges engage the faces of the window frame.

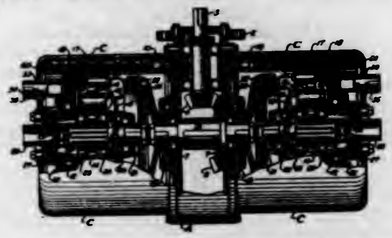


2,448,672
ART OF WINDING ODD-SHAPE COILS
Harry V. Knauf, Jr., Oaklyn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 30, 1944, Serial No. 570,663
7 Claims. (Cl. 140—92.2)

1. A winding head having an axis of rotation and a plurality of coil-forming slots arranged around said axis and extending into said head in alternately longitudinal and transverse directions with respect to said axis, and means responsive to rotation of said head for directing a strand

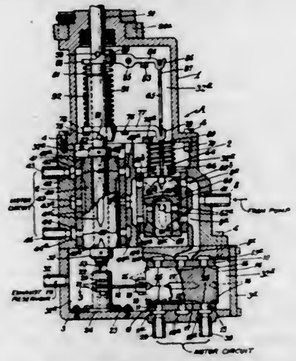
sequentially into said longitudinal and transverse coil-forming slots.

2,448,673
GARMENT HANGER
William R. Kohl, Glenview, Ill.
Application January 13, 1943, Serial No. 472,221
2 Claims. (Cl. 223—87)



1. A garment hanger comprising a sheet of stiff resiliently yieldable material which is cut in generally triangular form to present an upstanding center portion and two laterally sloping side portions, said hanger being provided above its lower edge with a horizontally extending slot and with a plurality of downwardly extending flaps which form the upper edge of the slot, and a separate downwardly opening channel strip positioned on the lower edge of the slot beneath the flaps in substantially centered relation to said edge, said flaps being deflectable in opposite directions with respect to the center of the channel strip whereby to frictionally engage and prevent sliding movement of a garment hung over the strip.

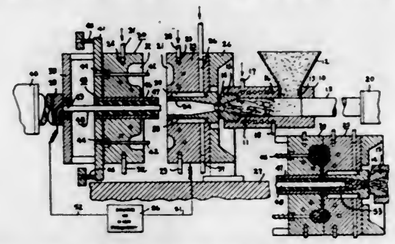
2,448,674
HOIST
Frank P. Lawler, Chicago, Ill., assignor of one-third to Charles H. Grant, San Francisco, Calif., one-third to Frank P. Lawler, Chicago, Ill., and one-third to Paul J. Tyler, Oroville, Calif.
Application April 23, 1945, Serial No. 589,921
4 Claims. (Cl. 254—185)



2. In a double drum hoist, a central housing, a pair of cable drum housings disposed one on each side of the central housing and secured thereto, a drive shaft journaled in the central housing, an intermediate shaft also journaled in said housing but at right angles to the drive shaft, a driven shaft mounted in each cable drum

housing, a cable drum disposed within each cable drum housing, said intermediate and driven shafts being concentric to the cable drums, a reduction gear train mounted within each cable drum and completely enclosed thereby, said reduction gear train connecting the driven shafts with the respective cable drums, a clutch inter-

posed between each driven shaft and the intermediate shaft, brakes to arrest motion of the cable drums when the clutches are disengaged, a pair of control levers one for each cable drum, and means actuated by each lever for selectively engaging or disengaging either the clutch or the brake on an adjacent cable drum.



2,448,675
CONTROL MECHANISM FOR A PLURALITY OF MOTORS
Peter L. Loewe, Kalamazoo, Mich.
Application November 6, 1943, Serial No. 509,255
12 Claims. (Cl. 60—97)

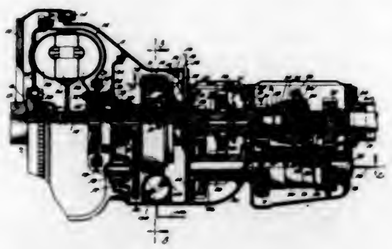
4. A hydraulic system including a pump, a plurality of motors, a separate circuit for each said motor, a hydraulic fluid supply from which the pump may draw fluid, and to which the motors may exhaust fluid, a bleeder valve interposed between the pump and both motors and motor circuits, and adapted to be moved to control the discharge of motive fluid under pressure from the pump, a throttle valve interposed between the bleeder valve and the motor of each said circuit, and means for operating said valves in unison.

2,448,676
METHOD OF INJECTION MOLDING
Howard F. MacMillin and George A. Waldie, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, a corporation of Delaware
Application April 23, 1943, Serial No. 484,139
3 Claims. (Cl. 18—55)

1. A method of injection molding plastic material which includes, heating a plastic material to a flowable condition within a heating chamber, moving the heated plastic material through a sprue chamber and between electrodes that are connected to a source of high frequency current for producing a field in said chamber and thereby intensely heating the plastic material only while passing through the high frequency field between the electrodes to a temperature sub-

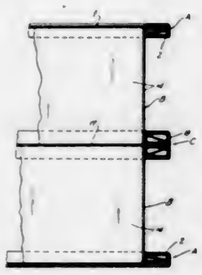
stantially above that of the plastic material in the heating chamber, cooling the wall of the sprue chamber that is in contact with the plastic material, said cooling being carried out concurrently with the heating of the plastic material in the sprue chamber to avoid absorption of heat by the wall of the sprue chamber, and delivering the plastic material at the elevated temperature from between the electrodes into a mold cavity.

2,448,677
CLOSURE FOR INFLATABLE STRUCTURES
Gerald D. Mallory, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application June 6, 1944, Serial No. 538,969
1 Claim. (Cl. 24—205.1)



A sealable closure means for disengageably securing together the edges defining an opening in a container and the like, said closure means comprising a slide fastener for uniting the edges of the opening; and sealing means attached adjacent the edges of the opening and arranged to interfit in complemental relation when the edges of the opening are united by the slide fastener, each of said sealing means being characterized in cross section by two reversed arcuate portions tangentially joined to one another and having at the extremity of one of the arcuate portions a thin knife-edged flexible fin which is disposed in generally overlapping arrangement with a similar fin at the extremity of one of the arcuate portions of the other sealing means when both of said sealing means are interfitted by the uniting of the edges of the opening by the actuation of slide fastener.

2,448,678
MOTOR VEHICLE TRANSMISSION AND CONTROL MECHANISM THEREFOR
Forest R. McFarland, Huntington Woods, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application September 16, 1942, Serial No. 458,494
25 Claims. (Cl. 74—472)

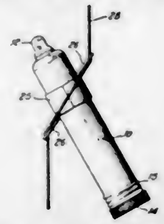


1. In a transmission, a driving shaft, a driven shaft, a hydraulic torque converter operative to

couple said shafts, said converter including a reversely operated reaction member, abutment means for restraining said reaction member from being driven reversely, control means operable to

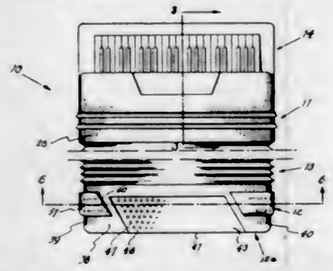
hold or release said abutment means, and coupling means being operable to drivingly connect the driven shaft with the abutment means for reverse drive when said abutment means is released by said control means.

2,448,679
KNOCKDOWN TRAY STACK
John W. Meinhardt, St. Louis, Mo., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application July 14, 1944, Serial No. 545,019
2 Claims. (Cl. 229—41)



1. A knockdown tray stack made entirely of corrugated board or the like comprising duplicate upper and lower side wall sections permanently closed on all sides and open at their tops and bottoms, duplicate closure sections, one for the top of the upper side wall section and the other for the bottom of the lower side wall section, and a partition section between said upper and lower side wall sections, each of said closure sections comprising a closure panel disposed in abutting relation to the adjacent end of a side wall section and a relatively wide flat tubular edge frame permanently secured to said closure panel and fitting around said end of said side wall section in outstanding relation thereto, said partition section comprising a closure panel disposed between and in abutting relation to the adjacent ends of said upper and lower side wall sections and a relatively wide flat edge frame permanently secured to said last mentioned closure panel and having tubular portions disposed above and below the latter and fitting around said adjacent ends of said upper and lower side wall sections in outstanding relation thereto.

2,448,680
METHOD OF PRODUCING CORN STEEP NUTRIENT
Robert P. Myers and Marvin L. Speck, Baltimore, Md., assignors, by mesne assignments, to National Dairy Research Laboratories, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application October 5, 1944, Serial No. 557,378
9 Claims. (Cl. 195—103)



1. A method of producing a nutrient for microorganisms from corn steep water which comprises concentrating the corn steep water to increase its total solids content, adding yeast to said steep water to ferment carbohydrates present in said steep water, adding an alkali to said steep water to render it strongly alkaline, heating said alkaline steep water to precipitate coagulable solids, separating the precipitated solids from the liquid components, and susbtantially neutralizing said liquid components.

2,448,681
FISH BITE SIGNAL DEVICE
Okey K. Nutter, Jamaica, N. Y.
Application September 21, 1944, Serial No. 555,128
3 Claims. (Cl. 43—17)

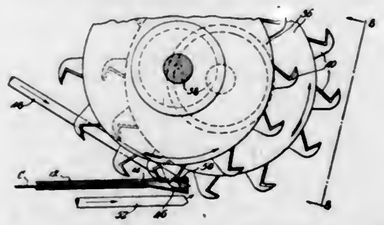
1. Means for securing a fishing line to a signalling device so that the device normally is held in a non-signalling position and is movable into a signalling position in response to a pulling force exerted on the hook end of the line, said means consisting of a clamping member applicable to said device, and laterally disposed line-engaging arms on said member, arranged obliquely and diametrically opposite each other.

2,448,682
SOUND DEFLECTOR FOR ACCORDIONS
Roberto Pancotti, Brooklyn, N. Y.
Application March 7, 1947, Serial No. 733,061
9 Claims. (Cl. 84—376)

1. In an accordion construction comprising treble and bass reed chambers interconnected by bellows, each of said chambers having sound transmitting openings in portions thereof, sound wave deflecting means on each of said chambers adapted to direct the sound waves emanating from said chambers towards each other.

2,448,683
TITANIUM OXIDE PRODUCTION
James Howard Peterson, Oak Ridge, Tenn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 9, 1944, Serial No. 521,685
7 Claims. (Cl. 23—202)

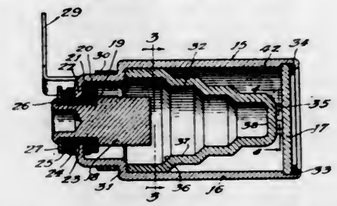
1. A process for obtaining small particle size, soft-textured, friable, anhydrous TiO_2 having an average particle size corresponding to the colloidal TiO_2 from which it is prepared, which comprises neutralizing a peptized colloidal TiO_2 dispersion free from extender particles, by means of an alkaline reagent, and then calcining the coagulated TiO_2 product at a temperature ranging from 300–700° C., in the presence of the salt formed by reaction between the alkaline agent and the peptizing agent in said colloidal dispersion.



2,448,684
PROCESSES OF DE-EMULSIFICATION OF WATER GAS TAR EMULSIONS AND OIL GAS TAR EMULSIONS
Sebastian A. Petrino, Brooklyn, N. Y.
No Drawing. Application August 10, 1946, Serial No. 689,816
6 Claims. (Cl. 252—332)

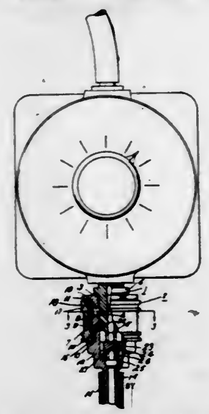
1. A method for de-emulsifying a water-in-tar emulsion resulting from a gas-making operation which comprises adjusting the pH of the water phase of the emulsion to a value between about 9 and 11 and heating the resulting mixture in the presence of a water soluble solphonate of an aromatic hydrocarbon.

2,448,685
ELECTRICAL CONTACT BRUSH
Dimiter Ramadanoff, Cleveland, Ohio, assignor to National Carbon Company, Inc., a corporation of New York
No Drawing. Application April 29, 1944, Serial No. 533,401
2 Claims. (Cl. 171—325)



1. Electrical contact brush comprising a major proportion of a mixture of graphite and copper, and a minor proportion of at least one of the rare earths of the thorium, cerium, and yttrium groups, such rare earth or earths amounting to about 15% by weight of the brush.

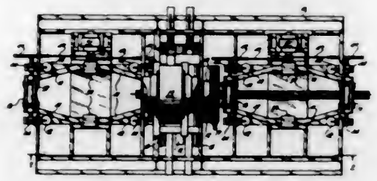
2,448,686
LOOP CUTTING MECHANISM
Charles G. Richardson, Springfield, Vt., assignor to Parks & Woolson Machine Co., Springfield, Vt., a corporation of Vermont
Application May 11, 1946, Serial No. 669,167
9 Claims. (Cl. 26—11)



1. A selvage loop cutting machine comprising means for supporting a strip of cloth to be moved longitudinally along a predetermined path in a flat plane, means providing a guide for supporting a marginal edge of the cloth in said path, a notch in the marginal edge of the guide, means for directing an air jet upon the cloth in the notch to form a salient, a pair of loop cutting units in juxtaposed relation at the notch, each unit having a plurality of loop cutting knives disposed in spaced relation on and along a movable support in position successively to pass through the notch and the salient transversely of the marginal edge of the cloth, and means for diverting selvage loops of said marginal edge toward said units as the cloth passes the notch.

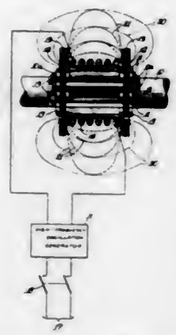
2,448,687
LIQUID AND GAS TRANSFER IN MERCURY SWITCHES
Ernst Walter Rickmeyer, Berkeley, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application October 26, 1945, Serial No. 624,790
8 Claims. (Cl. 200—80)

2. In a mercury switch of the class described a switch envelope, a porous dividing wall in the envelope forming two separate chambers, the wall being cup shape with tapered walls, and sloping surfaces on the inner faces of the walls projecting into the cup.



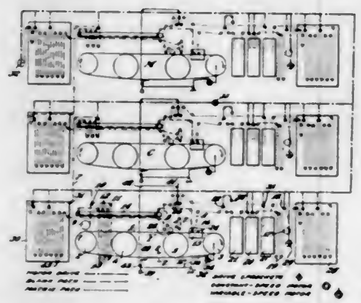
2,448,688
COUPLING
Albert T. Scheiwer, Erie, Pa.
Application May 21, 1945, Serial No. 594,929
2 Claims. (Cl. 285—97.3)

1. A coupling comprising a male member having a connecting portion with a peripheral groove; and a female member comprising a sleeve having radially extending ball-retaining apertures thereabout, ball members carried in said apertures, a member externally of said sleeve forming with said sleeve an annular groove and a flat annu-



lar-shaped spring for disposal in said groove and in engagement with the outer periphery of said inner sleeve adapted to engage said ball members and force them inwardly.

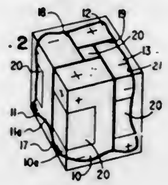
2,448,689
DEBARKING APPARATUS
Auxilius P. Schnyder, Teaneck, N. J.
Application October 16, 1944, Serial No. 558,810
4 Claims. (Cl. 144—208)



1. A de-barker, comprising in combination, a rotary drum provided with de-barking instruments, and log guide means at one end of said drum, said guide means including upper and lower pivoted arms carrying guide rolls, one of which rolls is power driven, weights urging said rolls toward the central axis, and spring means disposed to partially support the lower roll.

2,448,690
APPARATUS FOR BONDING WEAR-RESISTANT FACING ELEMENTS TO MACHINE ELEMENTS
Herbert F. Storm, West Allis, Wis., assignor to Sunbeam Corporation, a corporation of Illinois
Application June 7, 1944, Serial No. 539,107
2 Claims. (Cl. 219—12)

1. Apparatus for bonding a plurality of elongated cutting elements to teeth arranged about and radiating from the shank of a rotary tool bit cutter, comprising holding elements disposed against said cutting elements in the tooth slots separating said teeth to hold said cutting elements against the sides of said teeth and projecting radially beyond said cutting elements, one or more tensioned conductive metallic strands surrounding said shank and tightly wrapped around the projecting parts of said holding elements to force said holding elements into said tooth slots, thereby to bias each of said cutting elements against the sides of each of said teeth respectively, means for developing a high frequency magnetic field surrounding said cutter comprising a high frequency inductor surrounding said cutter and of a length substantially equal to the distance between said conductive strands, and means for substantially shielding the conductive strands from said high frequency field to prevent excessive heating thereof.



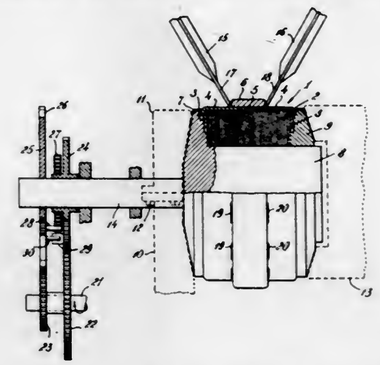
2,448,691
CINEMATOGRAPHIC METHOD AND APPARATUS
Frank W. Taylor, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine
Application June 15, 1945, Serial No. 599,593
10 Claims. (Cl. 271—2.3)

1. In the art of cinematography which comprises successively registering auxiliary films with a main film on a plurality of carriers which hold the films in registered contact throughout paths of considerable length, the main film feeding successively from one carrier to the other and one auxiliary film feeding into superposition with the main film on each carrier, the films feeding to and from the carriers through processing chambers and over driven sprocket wheels which engage the films throughout relatively short lengths, the method of propelling the films which comprises driving said sprocket wheels at constant and equal speed, driving each of said carriers at variable speed, and regulating the speed of each carrier in accordance with variations in the length of one of said films between that carrier and an adjacent one of said sprocket wheels, whereby the films are maintained in synchronism while keeping the speed constant in said processing chambers, even though said carriers and sprocket wheels have different degrees of inertia.

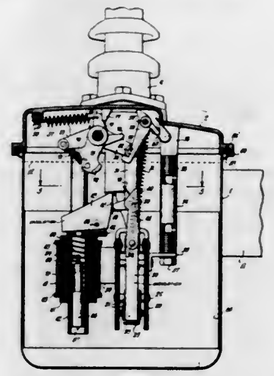
9. In the art of cinematography which comprises successively registering auxiliary films with a main film on a plurality of endless belts respectively, each belt having a succession of register teeth engaging the sprocket holes of the films, the main film feeding successively from one belt to the other and one auxiliary film feeding into superposition with the main film on each belt, the films feeding to and from the belts through processing chambers and over driven sprocket wheels, apparatus comprising means kinematically interconnecting said sprocket wheels so that they must rotate in unison, a motor for driving said means, means for driving each of said belts at variable speed, and means for regulating the speed of each belt in accordance with variations in the length of one of said films between that belt and an adjacent one of said sprocket wheels, whereby the films are maintained in synchronism while keeping the speed constant in said processing chambers.

2,448,692
MAGNETIC BLOCK
Macy O. Teetor, New Castle, Ind.
Application December 29, 1945, Serial No. 638,103
7 Claims. (Cl. 175—367)

1. A magnetic block comprising a plurality of permanent U magnets having their respective legs directed outwardly and their respective inner and side surfaces adjacent to but spaced from each other and having a plurality of north poles in spaced relationship and a plurality of south poles in spaced relationship exposed on each side of said block and arranged with said north poles in attracting juxtaposition with said south poles, and spacer means composed of non-magnetic material between said respective inner and side surfaces of said magnets.



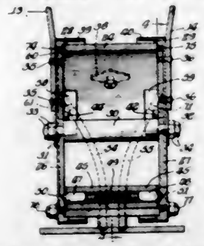
2,448,693
EVISCERATING METHOD AND APPARATUS
Richard D. Treiease and Carl H. Koonz, Chicago, Ill., assignors to Swift and Company, Chicago, Ill., a corporation of Illinois
Application December 27, 1943, Serial No. 515,670
4 Claims. (Cl. 17—11)



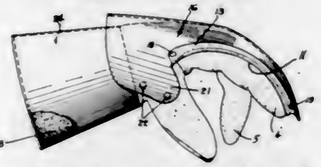
3. A method for eviscerating poultry carcass comprising the step of cutting a slit in the posterior portion of the carcass, manually removing through the slit a substantial portion of the viscera, particularly the intestines, liver, and gizzard, and thereafter removing by pneumatic suction the lungs, kidneys, testes, ovaries, and other loose viscera not previously manually removed, simultaneously severing while pneumatically removing viscera which is normally not readily separable from other portions of the carcass, and pneumatically cleaning the internal surfaces from which the viscera has been removed.

2,448,694
ELECTRIC WELDING APPARATUS
Joseph M. Tyrner, New York, N. Y., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application April 13, 1946, Serial No. 662,033
5 Claims. (Cl. 219—8)

1. Welding apparatus of the type described comprising means for holding a welding electrode in juxtaposition to the work, means for producing relative motion between the work and the electrode, and variable speed driving means for producing said relative motion comprising a constant speed drive shaft, a countershaft connected to the work, a pair of gears fixed to said drive shaft, a second pair of gears carried by said countershaft, one of said second pair of gears being fixed to the countershaft and the other being loosely mounted thereon, and a spring interconnecting the gears on the countershaft, the said gear fixed to the countershaft having blank spaces at intervals around the periphery thereof whereby this gear is alternately driven by a gear on the drive shaft at a speed corresponding with normal welding speed, and then at a higher speed by the action of the other gear on the countershaft and the said spring.



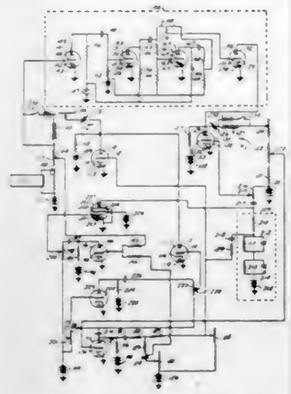
2,448,695
CIRCUIT BREAKER
Anthony Van Ryan, South Milwaukee, Wis., assignor to Line Material Company, a corporation of Delaware
Application July 24, 1944, Serial No. 546,245
12 Claims. (Cl. 200—89)



1. A circuit breaker comprising switch means, normally extended toggle link mechanism having one end operatively connected to said switch means, latch means normally holding the other end of said toggle link mechanism from motion of translation, means for detaching the said other end of said toggle link mechanism from said latch means when said toggle link mechanism executes collapsing motion, and means including condition responsive means for causing said toggle link mechanism to execute collapsing motion.

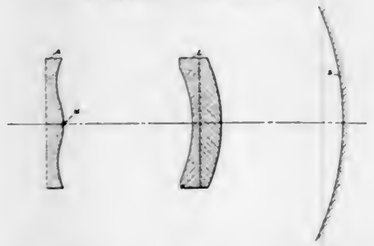
2,448,696
CONTROL UNIT
Charles A. Arens, Chicago, Ill., assignor to Arens Controls, Inc., Chicago, Ill., a corporation of Illinois
Application May 17, 1943, Serial No. 487,238
12 Claims. (Cl. 74—501)

1. A control unit comprising a frame, a control member pivotally mounted on said frame, said control member having a cylindrical indicator portion extending radially beyond and over the frame, and a transmission member connected at one end to said pivoted control member and adapted to be connected at its other end to a device to be controlled, said control member having a groove receiving the transmission member and within which the transmission member is maintained by a portion of the frame, said transmission member being axially shiftable by the operation of the pivoted control member, and said transmission member during its axial shifting in a given direction having uniform areas of contact with said frame.



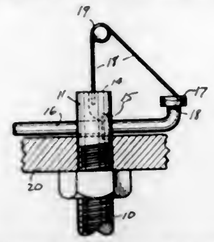
2,448,697
WELDING GLOVE
Robert Bakke, Minneapolis, Minn.
Application May 23, 1946, Serial No. 671,798
4 Claims. (Cl. 2—161)

1. In a welder's glove comprising the usual back, palm, and finger portions, seams securing together said back and palm portions along the sides of the glove, a strip of flexible material interposed between the back and palm portions along the forefinger side of the glove and secured therebetween by the seam securing together said portions, and a fireproof shield having one of its side edge portions secured to said flexible strip and overlying the back of the glove with its opposite edge suitably secured to the opposite side of the glove, thereby to provide a protective covering for the back of the glove against sparks and bits of molten metal which may fly from the work during a welding operation.



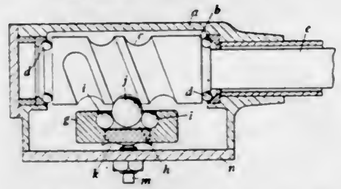
2,448,698
FLUTTER PREDICTING APPARATUS
Maurice A. Biot, Pasadena, and Thomas H. Wiancko, Altadena, Calif.
Application October 21, 1944, Serial No. 559,822
7 Claims. (Cl. 235—61)

1. Electrical means for predicting the behavior of a fluid-mechanical system capable of exhibiting the phenomenon of flutter, said means comprising an electric circuit for each degree of freedom of the mechanical system, a plurality of nonsymmetrical coupling impedances interconnecting said circuits, the character of the impedances



of said circuits and the character of said coupling impedances being such that the equations defining the currents in said electric circuits are identical in form to the equations defining the displacements with respect to each degree of freedom in the mechanical system.

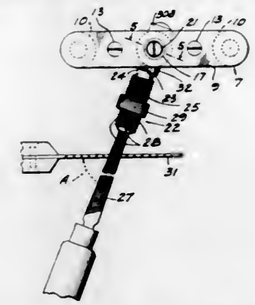
2,448,699
SCHMIDT TYPE IMAGE FORMER WITH NEGATIVE MENISCUS LENS SPHERICAL ABERRATION CORRECTOR
Albert Bouwers, Delft, Netherlands, assignor to N. V. Optische Industrie "De Oude Delft," Delft, Netherlands
Application December 18, 1945, Serial No. 635,687
In the Netherlands October 16, 1945
2 Claims. (Cl. 88—57)



1. An optical system comprising a concave spherical mirror, a refractive correction element having spherical refractive surfaces and having the character of a negative meniscus lens, the centers of curvature of said surfaces being within a distance from the center of curvature of said mirror less than one-fourth the radius of curvature of said mirror, said element being positioned between the mirror and the center of curvature thereof to be traversed only once by light rays entering the system, and a correction plate comprising an aspherical refractive surface placed substantially at the center of curvature of said mirror, said correction element and said correction plate substantially eliminating the spherical aberration introduced in said system by said mirror.

2,448,700
TOGGLE BOLT
Hugh N. Boyer, near Canfield, Ohio
Application August 12, 1946, Serial No. 689,860
4 Claims. (Cl. 85—3)

3. A toggle bolt for mounting through an opening in a horizontal member, said toggle bolt including a threaded portion and an unthreaded portion, the said unthreaded portion having a transversely positioned opening formed therein and an adjacently formed slot and a toggle member positioned in the said transverse opening, and slot and spring means for urging the said toggle member out of the said slot and partially through the said transverse opening.



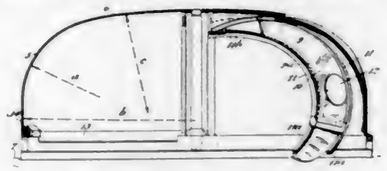
2,448,701
VEHICLE STEERING MECHANISM
Walter Henry Briggs, Birmingham, England, assignor to Burman & Sons Limited, Birmingham, England
Application October 8, 1946, Serial No. 701,868
In Great Britain November 6, 1945
2 Claims. (Cl. 74—500)

1. A vehicle steering mechanism of the kind specified, having in combination a helically grooved cylindrical member, a rock shaft arranged at right angles to said member, a lever on said rock shaft, a single ball engaging the groove in said member, a ring of balls carried by said lever and supporting said single ball, a fixed member, and a relatively adjustable cam-shaped track and abutment arranged between said lever and fixed member so as to cause said lever to hold said single ball in constant uniform contact with said groove.

2,448,702
COMBINED HANDLE MEANS AND FILE GUIDE FOR SAW FILES
Frederick C. Brothers, Los Angeles, Calif.
Application June 2, 1947, Serial No. 751,857
3 Claims. (Cl. 76—36)

2. In a file holder of the class described, an elongated handle forming member attachable to the outer end of a file preparatory to filing a saw therewith, a turnably adjustable cylindrical housing member carried by the midlength portion of said handle forming member and frictionally maintained thereby in its adjusted position, said housing member having through its midlength portion a diametrical bore, a sleeve turnably adjustable in said bore, said sleeve having an arcuate circumferentially extending slot, a clamping screw extending axially into the end of said housing member, the inner end of said screw being positioned in said slot to limit the range of adjustment of said sleeve, a chuck having an open end for the insertion of an end of a file thereinto, the opposite end of said chuck projecting into said sleeve with a working fit, a pin projecting radially from said chuck in a spaced rela-

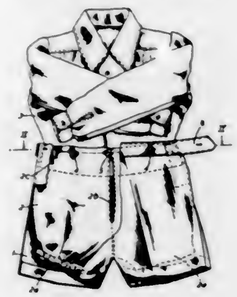
tion to its end, the aforesaid sleeve being provided with notches in its end portions, the individual notches in one end of said sleeve being diametrically opposite to corresponding individual notches in the opposite end thereof, said pin when seated in a given notch at one side of the aforesaid handle member, correctly positioning a file for filing one side of each of a series of saw teeth and when engaging the diametrically opposite notch in the opposite end of the sleeve automatically positioning the file for filing the opposite sides of each of said series of saw teeth.



2,448,703
COPOLYMERS OF HALO ALLYL ESTERS OF CARBOXYLIC ACIDS
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application May 16, 1941, Serial No. 393,777
1 Claim. (Cl. 260—93)

A copolymer comprising 2-chloroallyl propionate interpolymerized with butadiene-1,3, each monomer being present in the ratio of about 20% to 80% of the total reacted monomers.

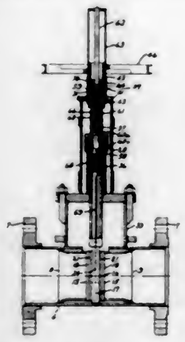
2,448,704
GUN TURRET FOR AIRCRAFT
Evelyn Cecil Muschamp d'Assis-Fonseca, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application October 28, 1944, Serial No. 560,825
In Great Britain October 4, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 4, 1963
4 Claims. (Cl. 89—36)



1. A gun turret comprising a cupola circular in plan, dish-shaped with a curved side wall of smaller radius than the plan radius and a generally flat top and having a slot in its side wall extending upwardly and part-way over the top of the cupola in a chordwise direction, guide means on the cupola extending along each side of the slot, and a strip of flexible material as an air-shield to close the slot and movable along

the guide means, the strip being so shaped that its long edges define helices the radii of which

approximate to the normal distances from a diametral axis to the edges of said slot.



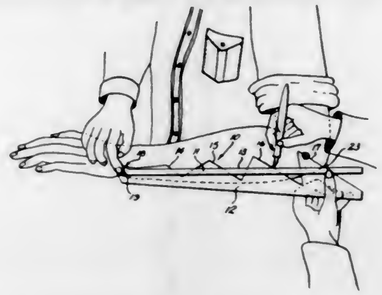
2,448,705
TROUSERS, SHORTS AND THE LIKE
Jessica Dobson, Whickham, England
Application February 25, 1946, Serial No. 649,796
In Great Britain November 10, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 10, 1964
2 Claims. (Cl. 2—70)

1. A garment comprising an upper waist portion and a lower body portion connected together adjacent the waist-line, said body portion including an outer member and a lining; said waist portion having buttons disposed around same underlying the upper portions of the outer member and lining; said upper portion of the outer member and lining having button holes registering with the buttons through which the said buttons are secured; said lining having a slit extending upwardly through the upper edge thereof; means for detachably securing the upper ends of the slit together; and button-holed straps at the waist-line of the outer member also engaging said buttons.

2,448,706
VALVE
Samuel H. Edwards, Richmond, Calif.
Application June 6, 1945, Serial No. 597,728
7 Claims. (Cl. 251—65)

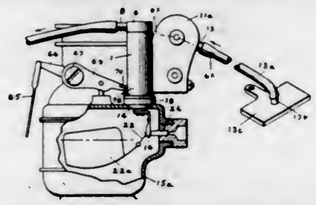
1. A valve comprising a valve body having an inlet and an outlet, an inlet valve seat, an outlet valve seat, said seats being opposite each other and having substantially parallel faces, a gate movable between said seats to control the rate of fluid flow from said inlet to said outlet, a threaded stem adapted to be moved between a raised position and a depressed position to raise and lower said gate, said gate including a seating member on each side thereof for engagement with one of said seats, flexible sealing means supporting each seating member on said gate and forming a closed chamber with the seating members, a nut cooperatively positioned with respect to said stem, a hand wheel for rotating said nut to raise and lower said stem, and means for supplying fluid under pressure to said chamber to force said seating members into engagement with

the valve seats, including a cylinder on an end of said valve stem and a piston movable by said nut and hand wheel to force fluid against said seating members to move said members against their respective seats.



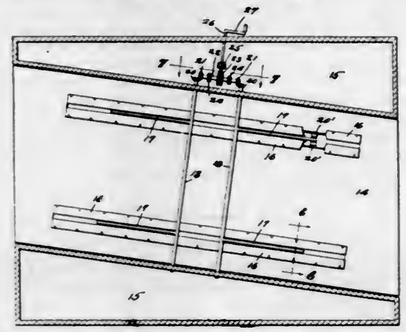
2,448,707
FEED TROUGH
Carl E. Erickson and Frederick L. Zufelt, Northfield, Minn., assignors to Northfield Iron Company, Northfield, Minn., a corporation of Minnesota
Application August 30, 1943, Serial No. 500,468
5 Claims. (Cl. 119—61)

4. A trough construction including a pair of panels arranged in trough formation, a pair of opposed end partition walls secured at the ends of said trough, a rotatable tumbler bar, and eccentric pins projecting from the opposite ends of said bar and supported by said opposed end walls, one of said eccentric pins projecting from said bar in diametrically opposite relation with respect to the axis of the bar to the other of said pins.



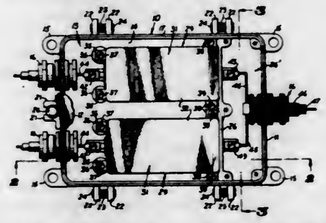
5. A trough comprising a pair of panels arranged in V formation and substantially joining along one longitudinal edge of each panel, partition walls intersecting said panels, said partition walls having slots therein extending from opposed edges thereof toward the vertex of the V formed by said panels, said panels including slots extending from said one longitudinal edge toward the opposite longitudinal edge thereof, said slots in said panels embracing portions of said partition walls and said slots in said partition walls embracing portions of said panels, and strip means supported by said partition walls extending along the free edges of said panels to lock said panels in place.

2,448,708
MEDICAL DIVIDER
Carl G. Geissler, Alameda, Calif.
Application December 5, 1944, Serial No. 566,761
3 Claims. (Cl. 33—192)



1. A measuring device comprising a pair of relatively movable members, one having a straight edge and the other having a series of tooth-shaped portions presenting spaced parallel edges intersecting said straight edge, said members upon relative movement indicating at the intersections of said straight and parallel edges variably but equally spaced alined points, and means associating said members for relative pivotal movement.

2,448,709
DEVICE TO REGULATE DEPTH OF GASOLINE IN THE FLOAT CHAMBER OF A CARBURETOR
Lewis W. Gilbert, Bradford, Pa., assignor to Frank Keiper, Rochester, and Nora E. B. Gilbert, Seneca Falls, N. Y.
Application October 30, 1943, Serial No. 508,407
19 Claims. (Cl. 123—119)



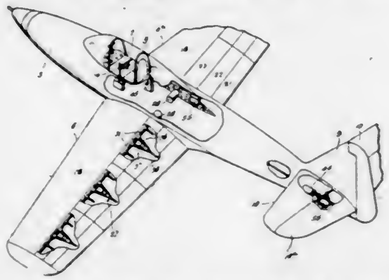
1. In a device to regulate the depth of gasoline in the float chamber of a carburetor, a float and a valve for maintaining the gasoline at a standard level, a regulating device that will depress the float and hold the valve closed until the level of gasoline in the float chamber is sensibly reduced, said regulating device comprising a connection between the intake manifold of the engine and a hot spot that will draw a current of air through the regulating device while the engine is running without depressing the float and will cause the float to be depressed after the air passing through the regulating device has become sufficiently warmed up, a thermostat affected by said warm air, a piston held against movement by said thermostat until the air becomes warm enough to cause it to release the piston, the vacuum of the intake manifold then causing the piston to move and depress the float and hold it in depressed position with the valve closed, means for positively holding the piston in its moved position during fluctuations in the vacuum.

2,448,710
VERTICALLY ADJUSTABLE BOOKKEEPER'S TABLE
William F. Graeske, Clearwater, Fla.
Application February 16, 1945, Serial No. 578,283
1 Claim. (Cl. 311—39)

A table of the class described comprising a table top having a well formed therein, a vertical movable book support operating within the well, tracks extending along the lower surface of the vertically movable book support, said tracks embodying elongated housings, one side of each housing comprising plates having their inner longitudinal edges spaced apart providing a clearance, spaced parallel operating rods extending across the bottom of the well, arms extending laterally from the operating rods, said rods having upturned ends disposed between the longitudinal edges of the plates, rollers mounted on the free ends of the arms, said rollers operating within the elongated housings in contact with the flanges, gears secured to the ends of the rods, a transverse shaft mounted at the ends of the parallel operating rods, gears on the ends of the transverse shaft meshing with the gears on the parallel rods operating the rods and arms as the transverse shaft is operated, a power shaft and gear operating the transverse shaft, and a crank handle formed integral with the power shaft by means of which the power shaft is operated, and the crank handle being disposed beyond the front edge of the table for easy operation.

2,448,711
DUAL FILTER AND CONNECTION SHIELD
Elton C. Hallett, Inglewood, Calif., assignor to Hallett Manufacturing Company, Inglewood, Calif., a corporation of California
Application September 28, 1945, Serial No. 619,236
1 Claim. (Cl. 174—35)

A shielded filter housing comprising a water tight, metallic box having relatively high side walls, a cover for the box having a sealing recess encompassing the tops of the walls, a resilient packing in the recess adapted to engage the tops of the side walls forming a water proof non-



metallic seal, and a metallic connection between portions of the cover and the box, said box having a lateral partition wall in the interior forming a separate compartment for connections, a separate metallic cover for the compartment spaced from the lid, a filter case anchoring bracket secured at one end by a metal to metal contact to the side of the partition remote from the compartment and at the other end to the bottom of the box and adapted to anchor a filter case in the box in erect position with terminals at opposite ends thereof exposed respectively inside and outside the compartment, and water proof terminal connections on the walls communicating with interior of the box respectively inside and outside the compartment for communication with the respective filter terminals.

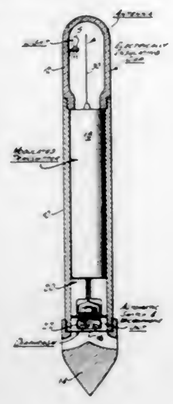
2,448,712

MEANS FOR CONTROLLING THE OPERATION OF WING AND TAIL-PLANE ELEMENTS OF AN AIRPLANE

William J. Hampshire, Cygnet, Ohio

Application February 26, 1944, Serial No. 524,045
4 Claims. (Cl. 244—44)

1. In an airplane, the combination of a fuselage having oppositely extending wing panels, each of said panels being provided with a plurality of trailing divisions, each composed of a plurality of hinged sections movable to vary the lift of said panels, means associated with each panel to simultaneously move the hinged sections of its divisions with a differential movement between the sections of each division and between those of the outboard and inboard divisions, a reversible motor for operating each of said last-named means, dynamic pressure controlled reversing switch means responsive to predetermined variations in the speed of the airplane to automatically place said motors in operation in the proper direction and speed according to increase or decrease of said speed, and further switch means operatively connected with a movable section of each wing panel to automatically render said motors inoperative when the movable wing sections have been moved predetermined distances for varying the lift of the wing panels in accordance with the variations in speed.



2,448,713

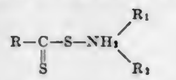
RADIO LISTENING BUOY

Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application December 2, 1944, Serial No. 566,321
15 Claims. (Cl. 177—386)

1. In signalling apparatus, a buoyant container adapted to be free floated in fluid during operation, a portion of said container being resilient and capable of movement under pressure, wave energy generating apparatus and transmitting apparatus coupled thereto, said generating apparatus and transmitting apparatus being located within said container, said apparatus including a circuit having at least one contact to be closed, a contact closing member linked to said resilient

portion of said container and positioned to close said contact when the container is placed in fluid which applies pressure to said resilient portion and a pressure responsive modulator including said resilient portion connected to aforesaid apparatus for modulating the generated wave energy.



2,448,714

DITHIO ACID DERIVATIVES

Albert F. Hardman, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

No Drawing. Application January 5, 1944, Serial No. 517,108
4 Claims. (Cl. 260—345)

1. As a new composition of matter, a compound conforming to the structural formula

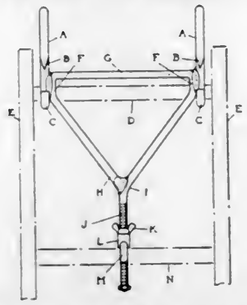
in which R is furyl, R_1 is selected from the group consisting of aliphatic and aromatic radicals and R_2 is selected from the group consisting of aliphatic radicals and hydrogen.

2,448,715

CONDENSATION PRODUCTS OBTAINED FROM ANACARDIC MATERIALS

Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey

No Drawing. Application August 25, 1945, Serial No. 612,714
4 Claims. (Cl. 260—473)



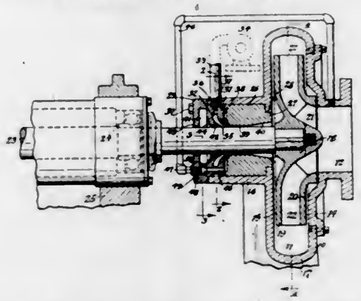
1. An oily organic condensation reaction product obtained by reacting under alkaline conditions an anacardic material selected from the group consisting of cashew nut shell liquid and distillates of cashew nut shell liquid, said distillates having a boiling point of about 225° C. at 10 mm. of mercury pressure with a hydrocarbon polychloride having at least one alkyl group, having at least one of its chlorine atoms on a terminal alkyl group and having at least two carbon atoms.

2,448,716

HOOK ATTACHMENT FOR LADDERS

George K. Hurd, Toronto, Ontario, Canada

Application December 9, 1944, Serial No. 567,377
3 Claims. (Cl. 228—51)



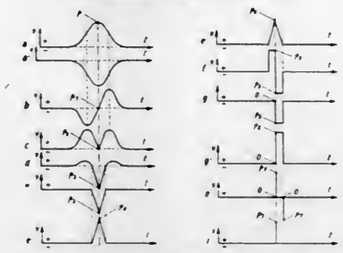
1. A hook attachment for ladders, comprising a pair of curved roof engaging hooks formed of bar stock extending downwardly to overlie the upper... ng on the outward side and curved inwardly and upwardly to embrace the adjacent rung, a bar steel frame formed of a rigid triangular loop having a central stem extending rigidly from one corner and having the other corners bent into straight parallel relation and welded to said hooks and supporting them in parallel relation, and a rung hook adjustably mounted on the central stem of said frame.

2,448,717

SEALING MEANS FOR PUMPING APPARATUS

Howard W. Jeffcock, Baldwinsville, N. Y., assignor to Morris Machine Works, Baldwinsville, N. Y., a corporation of New York

Application May 1, 1945, Serial No. 591,343
8 Claims. (Cl. 103—113)



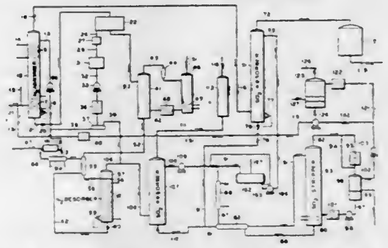
1. A sealing means for a pumping apparatus comprising a casing having a fluid inlet, a fluid outlet and a hub in a wall thereof, a rotatable impeller arranged in the casing and a shaft for driving the impeller extending through the hub; said sealing means including an inwardly tapering conical nozzle surrounding said shaft and operating to change the fluid from a relatively high pressure and low speed to a low pressure and high speed, and an inwardly flaring conical diffusion chamber which surrounds said shaft and has its small outer end communicating with the small inner end of said nozzle and its large inner end communicating with said casing and operates to change the fluid from a low pressure and high speed to a low speed and high pressure upon entering said casing.

2,448,718

METHOD OF AND DEVICE FOR P...CING PULSES AT THE MAXIMUM GR...IMUM OF AN ELECTRIC IMPULSE

Maurice Koulicovitch, Geneva, Switzerland, assignor to Societe Genevoise D'Instruments De Physique, Geneva, Switzerland

Application December 21, 1943, Serial No. 515,178
In Switzerland January 14, 1943
3 Claims. (Cl. 178—44)



1. The method of transforming an electric impulse whose tension progressively reaches to a maximum or minimum then progressively recedes from this value, into an impulse whose tension passes abruptly from zero to a definite value, which consists in transforming the initial impulse into an intermediate impulse whose voltage curve presents a cusp coinciding with the maximum or minimum value of the original impulse, the derivative of the curve at this cusp having two values, at least one of which is distinct from zero, and in further transforming the said intermediate impulse into an instantaneous impulse taking place at the very same instant as the initial impulse passes through its maximum or minimum.

2,448,719

METHOD FOR REMOVING NONCOMBUSTIBLES FROM FUEL GAS

John W. Latchum, Jr., Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application December 18, 1944, Serial No. 568,766
17 Claims. (Cl. 23—3)

11. A continuous process for upgrading the heating value of a natural gas containing noncombustible nitrogen gas comprising the steps of contacting said natural gas with liquid sulfur dioxide at superatmospheric pressure and at substantially atmospheric temperature whereby the nitrogen passes into the liquid sulfur dioxide and some sulfur dioxide vaporizes into the natural gas, separating the liquid sulfur dioxide from the natural gas containing vaporous sulfur dioxide, separating the nitrogen from the liquid sulfur dioxide at a subatmospheric temperature, and removing the nitrogen as a secondary product of the process, and recycling the latter sulfur dioxide

into the original contacting step at substantially atmospheric temperature and at superatmospheric pressure; contacting the so treated natural gas containing sulfur dioxide vapors with diethylene triamine at essentially atmospheric temperature and at superatmospheric pressure wherein the sulfur dioxide vapors become absorbed in the diethylene triamine, separating the finally contacted natural gas from the amine and removing said gas as the natural gas of upgraded heating value and primary product of the process: treating the latter amine at a superatmospheric temperature for removal of absorbed sulfur dioxide, separating said sulfur dioxide from the amine and recycling the amine into first said diethylene triamine at essentially atmospheric temperature and at superatmospheric pressure, and recycling said latter separated sulfur dioxide into the original contacting step at essentially atmospheric temperature and at superatmospheric pressure.

2,448,720

NOVEL GREASES

Francis J. Licata, West Caldwell, N. J., assignor to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey

No Drawing. Original application August 14, 1942, Serial No. 454,825, now Patent No. 2,431,760, dated December 2, 1947. Divided and this application March 14, 1946, Serial No. 654,529

5 Claims. (Cl. 252—36)

1. A lubricating grease comprising mineral oil, 2% to 20% of an aluminum soap of a saturated higher fatty acid and 0.1% to 5.0% of a barium soap of a higher fatty acid, the quantity of the barium soap being only a fraction of that of the aluminum soap.

2,448,721

ALUMINUM SOAP GREASES

Francis J. Licata, West Caldwell, N. J., assignor to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey

No Drawing. Original application August 14, 1942, Serial No. 454,825, now Patent No. 2,431,760, dated December 2, 1947. Divided and this application March 14, 1946, Serial No. 654,530

9 Claims. (Cl. 252—35)

1. A lubricating grease comprising mineral oil, 2% to 20% of an aluminum soap of a saturated higher fatty acid and 0.1% to 5.0% of a heavy metal soap selected from the group consisting of iron, cobalt, nickel, zinc and copper soaps of higher fatty acids, the quantity of heavy metal soap being only a fraction of that of the aluminum soap.

2,448,722

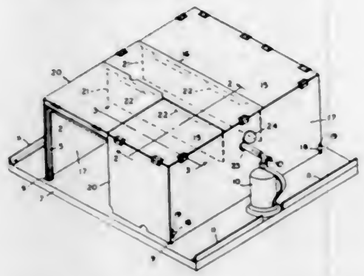
5-BENZIMIDAZOL DERIVATIVES OF BARBITURIC ACID

Gustav J. Martin, Philadelphia, and Souren Avakian, Oreland, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application April 4, 1946, Serial No. 659,666

4 Claims. (Cl. 260—257)

3. Disubstituted barbituric acids wherein the substituents are in the 5-position, and wherein one of said substituents is a member selected from the class consisting of alkyl and alkenyl groups and the other is a member selected from the class consisting of 2-benzimidazole, 2-alkyl-benzimidazole, and 2-alkenyl-benzimidazole groups.



2,448,723

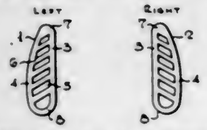
OVEN FOR HEATING ASPHALT TILE AND THE LIKE

Michael Mayer, Cleveland, Ohio

Application July 7, 1945, Serial No. 603,667

4 Claims. (Cl. 263—19)

1. A heating oven comprising a rectangular frame, legs at the respective corners of said frame for supporting the same, plates attached to said frame forming top, side and end walls, and two plates depending from said frame intermediate of the ends thereof and defining a space for the reception of highly heated gases, said intermediate plates being formed with cutaway portions in their upper edges.



2,448,724

NASAL FILTER

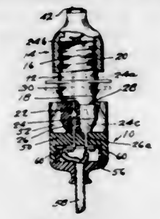
Clarence L. McGovney, Elizabeth, N. J.

Application April 2, 1946, Serial No. 659,068

8 Claims. (Cl. 128—148)

2. Nasal filter made of moulded flexible elastic oil-insoluble synthetic rubber composition, having a wall thickness of about $\frac{1}{32}$ inch to $\frac{1}{16}$ inch, a substantially uniform side wall height of about $\frac{1}{8}$ inch to $\frac{3}{8}$ inch, a horizontal section substantially corresponding to the interior contour of the human nostril, the bottom of said filter being open, and the top having a number of cross-hatch openings amounting to at least about 40% of the top area of said filter, and said cross-hatch openings being positioned at an angle of about 20 to 60° from the crosswise axis of the filter, whereby a resiliency is imparted to the entire filter, both in a crosswise direction and in a longitudinal direction.

2,448,725



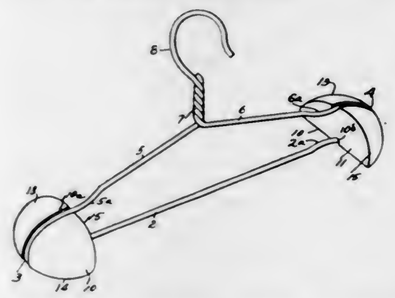
ELECTRICAL SOCKET AND ADAPTER

Arthur Morris, Los Angeles, Calif.

Application November 20, 1945, Serial No. 629,865

2 Claims. (Cl. 173—343)

1. In an electrical connector comprising an adapter and a socket, in combination, a shoulder on said adapter, repressible means in said socket, said last mentioned means being adapted to engage and rest upon said shoulder when said adapter and socket are in union, a cam, said cam being finger actuated and slidably positioned on said adapter and being adapted to engage and repress said repressible means whereby said adapter and socket may be disengaged, and means in said adapter and socket to conduct electrical energy therethrough upon connection with an exterior power source.



2,448,726

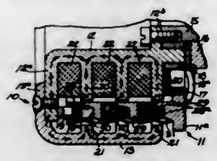
SHOULDER PAD FILLER GARMENT HANGER

Clifford H. Nelson, Tujunga, Calif.

Application March 5, 1946, Serial No. 652,061

4 Claims. (Cl. 223—88)

1. A shoulder garment hanger including a frame having shoulder end bows of resilient material, and shoulder-shape, substantially quadripartite spherical sector fillers which are clinched with their convex surfaces uppermost and outermost in respective, opposite end bows of the frame.



2,448,727

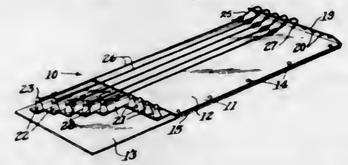
SOLENOID WITH ARMATURE

John George Oetzel, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, Beloit, Wis., a corporation of Illinois

Application March 27, 1944, Serial No. 528,194

17 Claims. (Cl. 175—337)

12. In an electric solenoid, the combination of a magnetizable core providing an annular outwardly facing pole, an armature ring encircling said pole and urged axially by flux threading the two, and a nonmagnetic ring fixed to said core and guiding said armature for axial sliding movement.



2,448,728

FISHHOOK HOLDER

Arthur S, Omohundro, Temple City, Calif.

Application June 15, 1946, Serial No. 676,924

5 Claims. (Cl. 43—32)

1. A fish hook holder comprising a pair of plates secured together in spaced relationship; means secured at one end of said plates to receive the pointed ends of fish hooks; a plurality of elongated relatively narrow sliders disposed for longitudinal movement between said plates, said sliders being slightly bowed to provide friction to maintain the adjusted positions thereof; and means on said sliders for receiving the looped ends of snells secured at their opposite ends to said fish hooks.

2,448,729

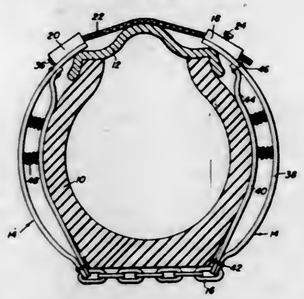
METHOD OF PROCESSING RICE BRAN AND RICE POLISH

Ataullah K. Ozai-Durrani, Stuttgart, Ark.

No Drawing. Application September 11, 1943, Serial No. 501,971

5 Claims. (Cl. 99—80)

1. The method of treating material consisting of at least one of the products rice bran and rice polish to effect the removal therefrom of the vegetable oil content thereof, which comprises mixing therewith an amount of water at least sufficient to solubilize at least a part of the natural sugar, starch and gluten content to form a binder, agglomerating the moistened material into larger sized aggregates, drying the said aggregates at a maximum temperature of about 140° F. to avoid decomposition of the vitamin and food values contained therein and in an inert atmosphere substantially free of oxidizing gases, and subjecting the dried aggregates to the oil extractive action of a fluid vegetable oil solvent under reduced pressure and at a maximum temperature of about 140° F.

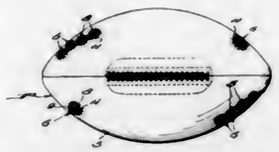


2,448,730

SKIDLESS STEEL GRIP FOR AUTO TIRES

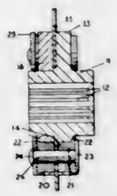
Louis Paraskevas, Washington, D. C.

Application October 29, 1947, Serial No. 782,726



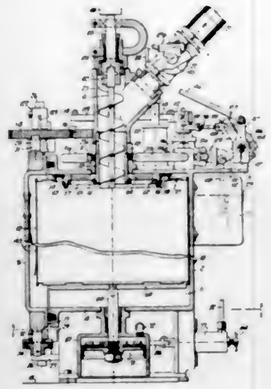
7 Claims. (Cl. 152—237)

1. An emergency tire chain comprising a tire non-skid tread member, side members joined to



each end of said tread member, fastening members secured to the upper ends of each of said side members, a cable connected to one of said fastening members and detachably secured to the other fastening member, said fastening members comprising sleeves, said cable having one end secured in one of said sleeves, a spring connected to said cable and to said sleeve in the interior thereof, the other end of said cable being slidably received in the other sleeve and a clamping means carried by said other sleeve for retaining said cable therein.

2,448,731
GRIPPING MEANS FOR GAME BALLS
Arthur Park, Wheaton, Ill.
Application October 14, 1946, Serial No. 703,151
6 Claims. (Cl. 273—60)

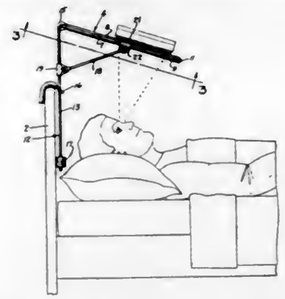


1. In combination with a game ball including a shaped leather casing provided with an opening of a size substantially corresponding to the area of a finger or thumb tip, a gripping element comprising a resilient disc having its margin secured to the inner surface of said casing in surrounding relation to said opening, said disc having a substantially central raised portion fitting and protruding outwardly through said opening and having a roughened outer surface.

2,448,732
FLEXIBLE DRIVE COUPLING
Arthur Henry Pattison, Coventry, England, assignor to Arthur Pattison Limited, Coventry, England
Application December 17, 1946, Serial No. 716,858
In Great Britain March 22, 1946
5 Claims. (Cl. 64—27)

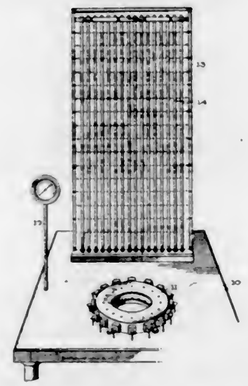
1. A flexible drive coupling between a hub and an annular plate-like member, including a radial flange fast with the hub, a ring which is slidingly mounted on the hub but held against rotation with respect thereto, the plate-like member being interposed between the ring and the flange, the ring and flange each having a circle of axially-extending holes which are aligned with one another, a set of compressed rubber bushes in each circle of holes, and pins extending through the bushes and carried by the member, the pins serving to axially compress the bushes against the member.

2,448,733
POWDER FILLING APPARATUS
David D. Peebles, Hillsborough, and Guy P. Hensley, San Francisco, Calif., assignors to Golden State Company, Ltd., San Francisco, Calif., a corporation of Delaware
Application September 20, 1943, Serial No. 503,082
10 Claims. (Cl. 249—62)



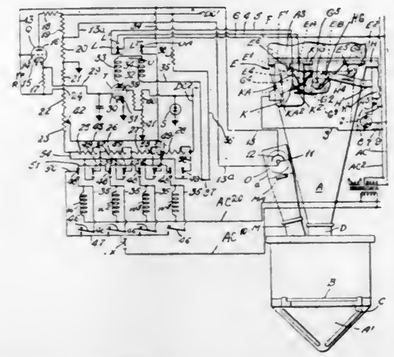
2. In apparatus for filling containers with powder, a chamber adapted to receive a container to be filled, the chamber including a door for permitting removal or introduction of the container, means serving to mount the door for swinging movement between open and closed positions, means serving to connect the interior of the chamber to a source of vacuum, valve means for controlling said last named means, means operated by the swinging of the door to closed position to effect opening of said valve means, a filling pipe communicating with the chamber and adapted to deliver a stream of powder to the container, valve means serving to control flow of powder through the filling pipe, means responsive to a predetermined degree of vacuum within the chamber for effecting opening of said last named valve means, and means responsive to introduction of a predetermined amount of powder into the container for effecting closure of the valve means for the filling pipe, for effecting closing of the valve means controlling communication with the source of vacuum, and for venting gas into the chamber to reduce the pressure therein to substantially atmospheric.

2,448,734
BOOKHOLDER FOR BEDSTEADS
Raymond L. Phillips, Minneapolis, Minn.
Application May 25, 1944, Serial No. 537,240
3 Claims. (Cl. 45—82)



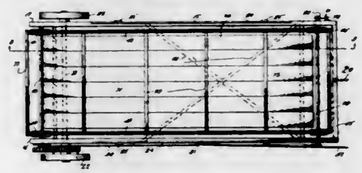
1. In a device of the class described, a U-shaped support having means for securing it to a bedstead whereby it may be vertically adjusted thereon, an open frame pivotally mounted on said support and having front, rear, and opposed side frame members and a centrally disposed frame member, said centrally disposed frame member having its ends secured respectively to the front and rear frame members, rods slidably mounted on said front and rear frame members and movable thereon towards or away from said central

frame member and cooperating therewith to support a book, said centrally disposed frame mem-



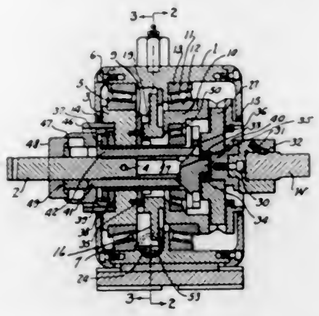
ber and said rods being located respectively above and below the median plane of said frame.

2,448,735
APPARATUS FOR MEASURING FORCE EXERTED BY A RESILIENT ANNULUS
Reginald J. S. Pigott, Pittsburgh, and Paul G. Exline, Penn Township, Allegheny County, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application May 28, 1945, Serial No. 596,260
12 Claims. (Cl. 73—120)



2. An apparatus for measuring the force exerted by a piston ring upon the walls of a cylinder comprising a test cylinder having a plurality of holes circumferentially arranged in the cylinder, plungers protruding through the holes and adapted to compress a piston ring placed in the cylinder adjacent said plungers, and a plurality of force measuring units adapted to operate said plungers each such unit comprising a body attached to said test cylinder having therein a fixed orifice and a variable orifice, a disk valve adapted to control said variable orifice and operate the respective plunger associated therewith, a source of fluid under pressure adapted to pass through said fixed orifice and operate said disk valve and consequently its respective plunger and means for indicating the resistance of said disk valve to the passage of said fluid.

2,448,736
PHOTOGRAPHIC SHUTTER OPERATING AND CONTROL MECHANISM
Jacob Rabinowitz, Brooklyn, N. Y., assignor to Pavelle Color Incorporated, New York, N. Y., a corporation of Delaware
Application November 16, 1946, Serial No. 710,251
6 Claims. (Cl. 95—53)



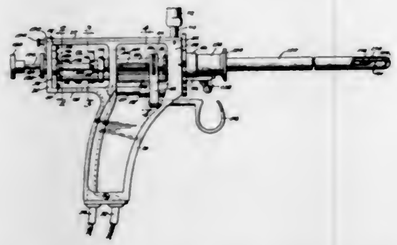
5. The combination with a photographic shutter, of mechanism for moving said shutter back and forth between open and closed position comprising the winding and armature of an electromagnet and a mechanical connection between said armature and shutter through which movement of said armature from a first position into a second position and thence back into its first position moves the shutter from either of its open and closed positions into the other of said positions, switch controlled electric circuit means for energizing said winding to move said armature from its first position into its second position, and bias means for moving said armature from its second position into its first position.

2,448,737
COMBINE HARVESTER AND STRAW BUNCHER
William F. Reisenweber, Newark, S. Dak.
Application October 18, 1945, Serial No. 622,974
3 Claims. (Cl. 214—83.36)

1. In a device of the class described, a gear wheel arranged to rotate with a traction wheel, a second gear wheel spaced away from and behind said rotating gear wheel, said second gear wheel being rigidly arranged on an end of a rotatable and rockable shaft, a means to rock said shaft to cause meshing action of said second gear wheel with said rotating gear wheel, said shaft having an endless conveyor trained thereover whereby rotation of said second gear wheel will move said conveyor, and a second shaft over which the conveyor is trained and connected to said means whereby complementary ends of the shafts will be rocked in unison.

2,448,738
CHUCK OR WORK HOLDER
Bernard O. Richard, Hillsdale, Mich., assignor to Allied Products Corporation, Detroit, Mich., a corporation of Michigan
Application July 9, 1945, Serial No. 603,757
12 Claims. (Cl. 82—40)

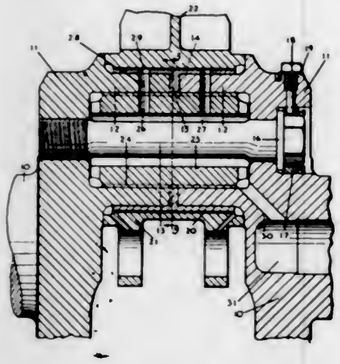
1. In a chuck or work holder for holding work for machining or grinding non-circular shapes, the combination of a stationary housing, a driving head and a driven head mounted to rotate in said housing, a work holding slide arranged to travel back and forth diametrically and periodically in said driven head, a second slide mounted in the driven head and arranged to slide back and forth diametrically in said head to alternately lock the driven head to the stationary housing and then to the driving head and means for causing such alternate sliding movements of said second slide to effect these purposes.



2,448,739
BROMINATION OF UNSATURATED ORGANIC COMPOUNDS
John Ross, Ramsey, N. J., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application April 15, 1942, Serial No. 439,085
9 Claims. (Cl. 260—660)

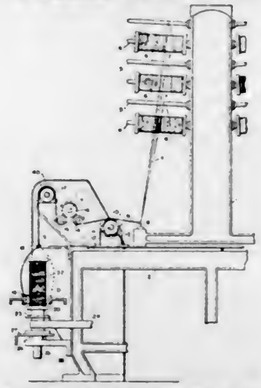
1. In the process of adding bromine to an unsaturated organic compound, the improvement which comprises intimately contacting said compound with bromine while at least one of said compound and said bromine is dissolved in liquid sulphur dioxide, the liquid sulphur dioxide being maintained during the addition reaction at a temperature at least as high as —40° C. but below the critical temperature of sulphur dioxide.

2,448,740
PROCESS FOR PREPARING STABLE COLLOIDAL SOLUTIONS OF METAL SULFIDES
Fernand Frederic Schwartz, Santiago, Chile
No Drawing. Application October 15, 1945, Serial No. 622,490
8 Claims. (Cl. 252—313)



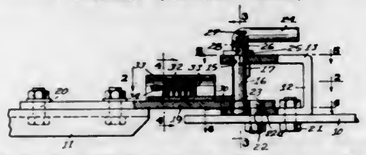
1. A process for the production of a stable colloidal solution of a metal sulfide, which comprises decomposing a member selected from the group consisting of the ammonium thio-salts of As, Mo, Sb, Sn, Pt and Au, by reacting the same in aqueous solution with a member selected from the group consisting of water-soluble aldehydes and water-soluble ketones.

2,448,741
ENDOSCOPIC SURGICAL INSTRUMENT
William W. Scott and August Lutz, Chicago, Ill., assignors to American Cystoscope Makers, Inc., a corporation of New York
Application April 25, 1945, Serial No. 590,208
8 Claims. (Cl. 128—303.15)



5. A surgical instrument comprising a grip member, an instrument carrier rotatably and reciprocably mounted upon the grip member, a cutting electrode removably secured to the instrument carrier and rotatable and reciprocable therewith, a telescope secured to and rotatable with the instrument carrier, means carried by the grip member for imparting reciprocation to the instrument carrier, and means carried by the grip member for imparting rotation to the instrument carrier with respect to the grip member through 360°.

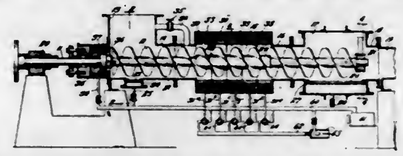
2,448,742
BUILT-UP CRANKSHAFT
George T. Smith-Clarke and Arthur Francis Varney, Coventry, England, assignors to Alvis Limited, Coventry, England
Application March 20, 1945, Serial No. 583,752
In Great Britain January 13, 1945
5 Claims. (Cl. 74—598)



1. A built-up crankshaft, for an internal-combustion engine, comprising coaxial hollow portions of a crankpin, a sleeve having an internal flange, said sleeve mounted on said portions with its flange extending between said portions, said sleeve having an external bearing surface, and a rigid means providing keying connections for said flange and said portions in the interior of said flange and portions.

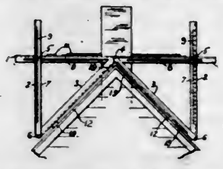
2,448,743
CORD PROCESSING APPARATUS
Raymond E. Solliday and Herbert E. Riggs, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application May 4, 1946, Serial No. 667,332
8 Claims. (Cl. 57—35)

1. In a thread processing apparatus embodying a plurality of thread supply packages, means joining the several threads, twisting means, and positively driven feeding means for delivering the joined threads to the twisting means at a substantially constant rate, rotatable burnishing means between the feeding means and the twisting means for contact with the joined threads, means actuating the feeding means and the burnishing means and differential drive means associated with the actuating means to afford a rotational speed differential between the feeding means and the burnishing means.



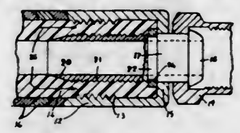
2,448,744
TRACTOR-TRAILER COUPLING DEVICE
Spencer R. Strader, Hanford, Calif.
Application April 26, 1946, Serial No. 665,679
7 Claims. (Cl. 280—33.15)

1. A trailer hitch or coupling comprising a rearwardly directed fixed arm on a tractor vehicle and a forwardly directed arm on a trailer vehicle; a clevis member fixed on one of said arms and having an upper and lower jaw spaced apart, a hitch bolt adapted for entering axially aligned apertures in said jaws, a pivot pin fixed on the lower jaw, said other arm consisting of a drawbar being provided with a suitable opening for simultaneous engagement with said hitch bolt and said pivot pin, the rear edge of said opening being covered on the radius from the axis of said pivot pin and means for taking up slack between said hitch bolt and said arms.



2,448,745
CONVEYING PULVERIZED MATERIAL
Holger Struckmann, Riverside, Calif.
Application November 16, 1943, Serial No. 510,555
4 Claims. (Cl. 302—50)

1. Apparatus for conveying pulverized material, comprising a screw impeller; a casing surrounding the screw impeller and providing a feed hopper at the entrance end of the screw conveyor, a porous cylindrical wall surrounding an intermediate part of the screw impeller and a non-cylindrical portion having a porous floor under the rear portion of the screw impeller; means



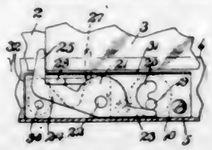
providing a chamber surrounding said cylindrical wall and means for maintaining a partial vacuum in said chamber; and means for providing a chamber under said porous floor and means for maintaining a super-atmospheric pressure in said chamber.

2,448,746
ADJUSTABLE SCAFFOLD
Ray A. Sundeen, Valparaiso, Ind.
Application March 9, 1946, Serial No. 653,366
1 Claim. (Cl. 304—20)

A unitary chimney scaffold made in duplicate halves each half comprising a pair of roof members, duplicate platform members and duplicate vertical platform supports, each member being angular in cross section, the platform supporting members having lengthwise slots and adjacent notches, the platform supporting members having slots formed lengthwise thereof, the roof members at their lower end having spacing tie members attached thereto to join a roof member on one side of the chimney with a duplicate roof member on the other side of the chimney, attachable and detachable diagonal braces from one vertical member of a half unit on one side of the chimney with the vertical members of the other half unit on the other side of the chimney, and means for pivoting the several members to each other with the flat portion of the angles in engagement with each other.

2,448,747
PIPE COUPLING
Frank Edward Swain, Ewell, England, assignor of one-half to Douglas Darby, Northwood, Middlesex, England
Application April 3, 1945, Serial No. 586,384
In Great Britain January 12, 1945
3 Claims. (Cl. 285—84)

1. In combination with the end of a flexible hose, a rigid sleeve screwed thereon, said sleeve having a flange abutting the end of the hose but



not extending radially inwardly as far as the bore of the hose when uncompressed, a rigid member screwed into the end of the hose, the screw-threads of said sleeve and member being of opposite hands, and a ring the internal periphery of which is shaped to receive the screw-thread on said member, said ring disposed in the end of the hose and interacting between the axially-inner face of said flange and a peripheral groove of said member.

2,448,748

SLIDING DOOR LOCK

Anthony Vanderveld, Grand Rapids, Mich., assignor to Grand Rapids Store Equipment Company, Grand Rapids, Mich., a corporation of Michigan

Application March 4, 1946, Serial No. 651,682
7 Claims. (Cl. 70—82)

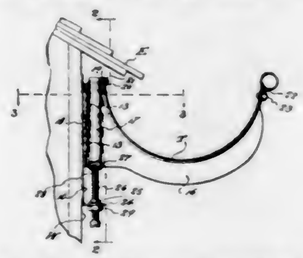
4. The combination with a pair of sliding doors mounted in a guide member of a lock therefor comprising a lever pivoted between its ends, a finger on one end of the lever adapted to engage one door, means acting upon the other end of said lever to move said finger into engagement with said door, a second pivoted lever having a finger movable into engagement with the other door, means coacting between the levers to actuate the second lever by movement of the first lever and spring means acting to move said fingers on said levers out of engagement with said doors.

2,448,749

TREATED PLANOGRAPHIC PRINTING PLATE

Charles H. Van Dusen, Jr., Willoughby, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 24, 1947, Serial No. 724,231
4 Claims. (Cl. 101—149.2)



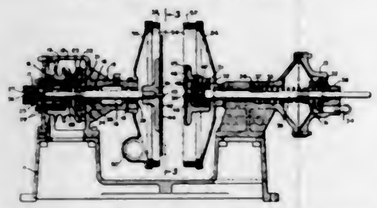
1. A paper planographic printing plate impregnated with 2 amino, 2 methyl, 1,3 propanediol.

2,448,750

ADJUSTABLE EAVES TROUGH SUPPORT

Charles H. Van Wert, Chatham, N. J.

Application December 13, 1945, Serial No. 634,687
2 Claims. (Cl. 248—48.2)



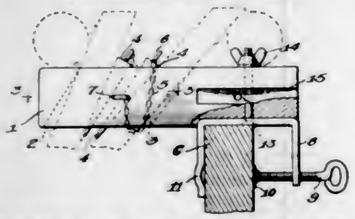
1. An eaves trough hanger comprising a base plate adapted to be affixed to a building wall adjacently beneath the eaves of the building roof, said base plate having a perpendicular slide-way means along its front face, a trough supporting bracket arm having a rigid perpendicular butt section of enlarged cross section and substantial length, integral slide wings laterally extending from the rearward side of said butt section to slidably engage said slideway means of the base plate so as to dispose said butt section closely adjacent to the latter, a bearing member outwardly projecting from said base plate below said slide-way means thereof, said bearing member having an internally screw-threaded way aligned with the axis of said bracket arm butt section, and an adjustable jack screw threaded through said way and adapted to engage the lower end of said butt section, whereby to exert a direct non-canting upward axial thrust upon said butt section and its slidable connection with said base plate.

2,448,751

RECORD EDGING LATHE

Frank G. Volkel, Los Angeles, Calif., assignor to Volkel Bros. Machine Works, Los Angeles, Calif., a corporation of California

Application August 10, 1946, Serial No. 689,675
6 Claims. (Cl. 51—237)



3. In a lathe, axially aligned supporting members, one of which is reciprocable only and the other of which is rotatable and reciprocable; clamping members mounted in confronting relationship on said supporting members and adapted to grasp a work piece when moved thereby to adjacency, that clamping member mounted on said first defined supporting member being rotatable with respect thereto; means for reciprocating said first defined supporting member; means actuatable by said last mentioned means for rotating said second defined supporting member; and a bisected enclosure for said clamping members having one part secured to said first defined supporting member and reciprocable therewith to effect closing and opening of said enclosure.

2,448,752

FISHING ROD HOLDER

Simon P. Wagner, Rockville, Md.

Application July 26, 1945, Serial No. 607,196
3 Claims. (Cl. 248—42)

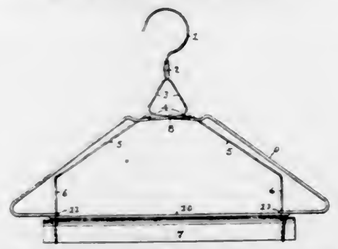
1. A fishing rod and reel holder including a solid block adapted to be detachably connected to a part of a boat or other support, said block having an inclined opening extending entirely therethrough and oversized with respect to the handle of the rod which is adapted to be inserted and held therein offset with respect to the inclination of the opening, the extent of the insertion of the handle being limited by the reel contact with a face of the block, and supplemental holding means insertable at any point between the oversized opening and handle adapted to vary the angle of the rod with respect to the block.

2,448,753

HEAT-TREATING AND COLD-ROLLING HADFIELD MANGANESE STEEL

Carl W. Weesner, Warren, Ohio, and Wallace B. Leffingwell, Sharon, Elvan R. Babylon, New Wilmington, and Homer L. Schell, Sharon, Pa., assignors to Sharon Steel Corporation, Sharon, Pa., a corporation of Pennsylvania

No Drawing. Application December 16, 1943, Serial No. 514,548
10 Claims. (Cl. 148—12)



2. The method of making cold rolled Hadfield manganese steel strip, less than 0.109" in thickness, having a fully and uniformly austenitic structure with carbides in solution, and being free of surface decarburization and embrittlement; which comprises, completely austenitizing 0.109" thick hot rolled Hadfield manganese steel strip by heating the strip as it moves continuously through a furnace to a strip temperature of 1900° F. to 2000° F., then before sufficient time has elapsed for the occurrence of surface decarburization quickly water quenching the continuously moving strip immediately as it leaves the furnace to keep the carbides in solution, and then cold rolling the strip down to 0.075" to 0.080" thick strip.

2,448,754

GARMENT HANGER

Emil Weibel, Paterson, N. J.

Application September 25, 1945, Serial No. 618,483
6 Claims. (Cl. 223—91)

1. A garment hanger comprising two stiff upright members of which the first is generally loop-shaped and has the lower portion of its loop extending substantially straight and horizontal, and the second of which members has a substantially straight portion parallel to the straight horizontal portion of the first member, the second member being movable downwardly and upwardly relative to the first member to advance its straight horizontal portion into clamping relation with the straight horizontal portion of the first member and to retract it therefrom, respectively, the first and second members having sliding engagement with each other at a plurality of locations for guiding the second member on the first member during such movement, and selectively operable means at one of said guiding locations for locking the second member to the first member with the straight horizontal portions of such members in confronting clamping position relative to each other.

2,448,755

PROCESS OF PREPARING 1,4-DICYANO BUTENE-2 FROM CORRESPONDING HALOGEN COMPOUNDS

Carl N. Zellner, Elizabeth, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware

No Drawing. Application March 28, 1941, Serial No. 385,692
4 Claims. (Cl. 260—465.8)

1. A method of producing a 1,4 dicyano butene-2 which comprises reacting a 1,4 dihalo butene-2 of the group consisting of 1,4 dichloro butene-2 and 1,4 dibromo butene-2 with a copper cyanide to replace each of the halogen atoms in said dihalo butene-2 with a cyano group, said reaction being conducted under substantially non-aqueous conditions in the presence of a substantially non-aqueous non-polar liquid, said liquid being a solvent for said 1,4 dihalo butene-2 and unreactive with 1,4 dicyano butene-2, copper cyanide and the aforesaid dihalo butene-2.

2,448,756

METHYL SILOXANE ELASTOMERS

Maynard C. Agens, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

No Drawing. Application March 14, 1944, Serial No. 526,473
18 Claims. (Cl. 260—37)

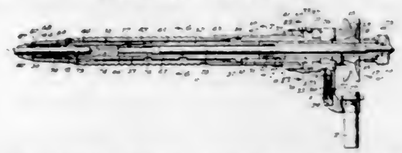
1. A solid, elastic, curable methyl polysiloxane consisting of methyl radicals and silicon and oxygen atoms and containing an average of from 1.98 to 2.0 methyl groups per silicon atom, said solid methyl polysiloxane being the product of condensation of a liquid polymeric dimethylsiloxane containing up to 2 mol per cent copolymerized monomethylsiloxane.

2,448,757

ELECTRICAL RESISTOR

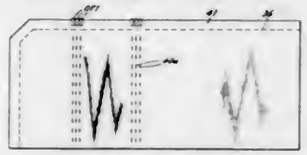
Clarence F. Alban, Pontiac, Mich., assignor to W. M. Chace Company, Detroit, Mich., a corporation of Michigan

Application November 15, 1945, Serial No. 628,706
8 Claims. (Cl. 201—63)



1. An electrical resistor having high strength and high corrosion resistance at high temperatures and a predetermined cross-sectional area and length and a predetermined electrical resistance consisting of a metallic outer layer having high strength and corrosion resistance and an inner layer of a different metallic material wherein the cross sectional areas and resistivities of the inner and outer layers are correlated according to the following formula:

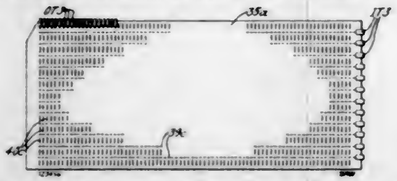
$$\frac{r_2^2}{R}=\frac{(r_2-r_1)(r_2+r_1)}{R_1}+\frac{r_1^2}{R_2}$$



wherein R is the resistivity of the composite resistor, R_1 the resistivity of the alloy comprising the outer layer, R_2 the resistivity of the metal or alloy comprising the core, r_2 the radius of the outside tube, and r_1 the radius of the core.

2,448,758
DENTAL ENGINE HAND PIECE
Robert C. Angell, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a corporation of Pennsylvania
Application September 22, 1944, Serial No. 555,245
7 Claims. (Cl. 32—26)

1. A dental engine handpiece comprising a wrist-joint support, a sheath removably carried by said support, means arranged to yieldingly engage said sheath with said support, a tool actuating spindle having relatively separable complementary sections operatively connected in slip-joint relation to rotate as a unit, and respectively mounted independently in bearings in said sheath and in said support and arranged to be relatively disconnected by the axial withdrawal of said sheath from said support, tool chucking means adjustable to effect clamping and releasing of a tool, and including a chuck rod extended through and beyond said spindle and adjustably engaged therewith, and means exterior to said spindle arranged to actuate said tool chucking means to effect grip or release of said tool.



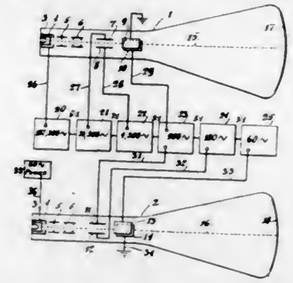
2,448,759
WOVEN SENSING GRIDS FOR PERFORATED RECORDS
John W. Armbruster, East Rockaway, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 5, 1944, Serial No. 521,232
6 Claims. (Cl. 235—61.11)

4. A circuit connecting device comprising a pair of sheets of insulation material, a plurality of regularly spaced conducting lines woven in and out in a horizontal direction along the material of one of said sheets, a plurality of regularly spaced conducting lines woven in and out along a vertical direction in another adjacent one of said sheets, said lines of adjacent sheets extending at intervals, whereby contact is selectively made between lines through a perforated record interposed between said sheets to provide contact paths for electrical control impulses.

2,448,760
WOVEN SENSING GRIDS FOR PERFORATED RECORDS
John W. Armbruster, East Rockaway, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 23, 1947, Serial No. 781,576
5 Claims. (Cl. 235—61.11)

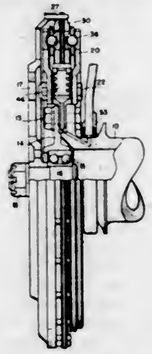
5. A flat data sensing device comprising a pair of sheets of insulation material, each of said sheets provided over a data representing area with a woven set of spaced horizontal conducting wires representing data value and a woven set of spaced vertical conducting wires representing ordinal position, said wires having warp and woof portions extending outward from said sheets, said sets of wires of different sheets of said pair of sheets arranged in contiguous relation and selectively contacting at intersecting points where the wires have said portions, with terminals of said sets of wires exposed at the edges of both sheets,

whereby a data sheet with differentially located data representing perforations can be inserted between said pair of sheets and said sets of wires to permit said contacting through said perforations so that data representing impulses can enter into the horizontal set of wires, selectively pass through the data sheet at the contacting points and emerge from the other set of wires of the next insulation sheet, said impulses representing the data of the perforated sheet.



2,448,761
CIRCUIT BEARING ELEMENT
John W. Armbruster, East Rockaway, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 23, 1947, Serial No. 781,577
5 Claims. (Cl. 235—61.12)

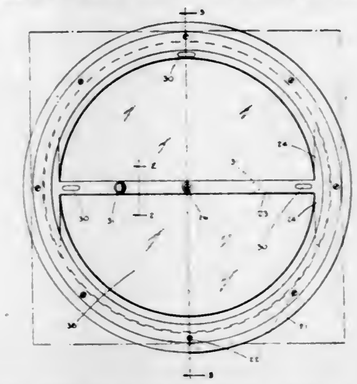
4. A flat data representing device comprising a sheet of insulation material, said sheet provided over a data representing area with a woven set of spaced horizontal conducting wires representing data value and a woven set of spaced vertical conducting wires representing ordinal position, said wires having warp and woof portions being either together or separated from each other and said sets arranged in contiguous regulation and contacting electrically at certain predetermined intersecting points where the wires have said portions which are together, with terminals of said sets of wires exposed at the edge of said sheet, whereby data representing impulses can enter into the horizontal set of wires, selectively pass through the contacting points and emerge from the other set of wires, said impulses representing the data of the sheet.



2,448,762
PROCESS AND APPARATUS FOR MONITORING SYNCHRONIZING GENERATORS
Harold Edward Beste, East Rutherford, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application February 13, 1945, Serial No. 577,699
10 Claims. (Cl. 315—9)

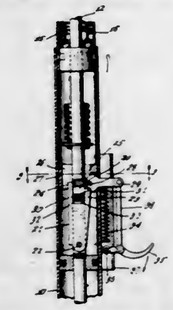
1. A device for monitoring a series of connected sawtooth wave generating oscillators the frequency of each one of which is an integral multiple of a preceding one, which comprises a cath-

ode-ray tube and a direct lead from each one of at least three of said oscillator to a different deflection electrode of said tube.



2,448,763
CLUTCH MECHANISM
John J. Bloomfield, Burbank, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application December 14, 1944, Serial No. 568,181
22 Claims. (Cl. 192—44)

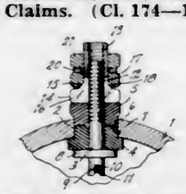
1. A clutch mechanism comprising a driving element, a driven element, friction means for transmitting rotation from one element to the other, actuating means energized by angular movement between the elements for operating the friction means, means for holding the actuating means against operation upon overrunning rotation of the driven element with respect to the driving element without interfering with operation of the actuating means produced by rotation of the driving element relative to the driven element, and fluid pressure actuated means operable at the will of the operator for rendering the last named means ineffective so that angular movement of the driven element will energize the actuating means for the transmission of rotation from the driven element to the driving element instead of overrunning the same.



2,448,764
ROUND WINDOW WITH REVOLVING SASH
Gaylord A. Brinson, Mooreland, Ind.
Application February 21, 1945, Serial No. 579,065
3 Claims. (Cl. 20—52)

1. A circular window construction, comprising a circular frame provided with internal circular walls of different diameter, said frame formed of semi-circular sections meeting end to end, a plate fixed to both sections at their point of jointure to hold the sections in assembled circular relationship, a sash confining flange on the outer part of each section, a semi-circular sash fitting in one of said circular walls inwardly of said sash confining flange, a circular stationary sash supporting frame element mounted in the frame inwardly of said sash adjacent said sash, a sash confining flange on the stationary sash supporting frame, the rim of said sash being rabbeted to receive the sash confining flange of the stationary sash supporting frame, a semi-circular sash having a rabbeted inner rim fitting in said sta-

tionary sash supporting frame inwardly of the sash confining flange thereon, means for pivotally connecting said semi-circular sashes so that said sashes will swing about a common axis of rotation, a framing rim secured to said frame outwardly of said last mentioned sash to retain said sashes in said frame, the internal diameter of said rim being equal to the internal diameter of said sash retaining flanges, a cross bar on each semi-circular sash, side extensions on each cross bar, said extensions adapted to relieve the weight of said sashes on said pivot means and provide holds for mounting said sashes, and a latching device for holding the sashes in open and closed positions.

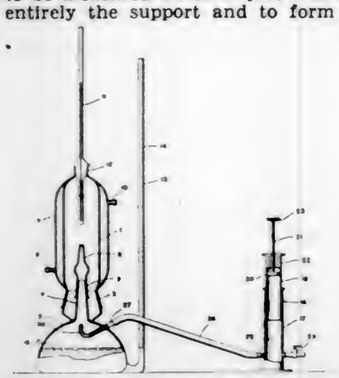


2,448,765
TRIGGER MECHANISM
Leander Browning, Greenwood, Ind.
Original application April 14, 1944, Serial No. 530,975. Divided and this application October 11, 1945, Serial No. 621,768
3 Claims. (Cl. 188—67)

1. Trigger means, comprising a main body, a reciprocable member carried by the main body, a

pivoted latch carried by said reciprocable member and biased laterally thereof, and a trigger comprising a plate pivoted on an axis transverse of the line of movement of the reciprocable member, said plate having an abutment surface engageable by the latch to restrain movement of said reciprocable member in one direction and a finger engaging said latch to swing its free end away from said abutment surface to eliminate said restraint, one edge of said plate projecting laterally beyond the reciprocable member with said edge slidable in a guide groove extending lengthwise of the line of movement of the reciprocable member.

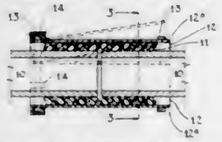
2,448,766
CONNECTOR FOR ELECTRIC CABLES AND THE LIKE
Vincent D. Burke, South Haven, Mich., assignor to Abbott-Becker Distributing & Manufacturing, Kalamazoo, Mich., a partnership
Application March 19, 1947, Serial No. 735,762
5 Claims. (Cl. 174—153)



1. A connector for electric cables comprising a threaded post provided with a flange at its inner end adapted to engage insulation arranged on the post, an internally threaded sleeve threaded upon the post and having a head at its inner end adapted to engage insulation and adapted to receive a wrench, the outer end of said sleeve being externally threaded, there being a conical shoulder at the inner end of the threads, said sleeve having a longitudinal slot extending from its inner end through the head and into its threaded portion but terminating substantially short of the outer end of said sleeve, a sleeve clamping nut threaded upon the sleeve to cover said slot and internally beveled to coact with said conical shoulder, and a second nut threaded upon said sleeve and adapted to clamp a cable terminal against said sleeve clamping nut and to constitute a lock nut therefor.

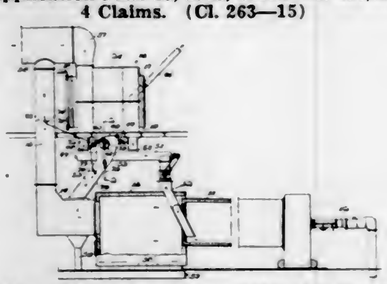
2,448,767
PROCESS OF HYDROXYETHYLATION
Warner W. Carlson, Pittsburgh, Pa., assignor to Mellon Institute of Industrial Research, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application December 5, 1942, Serial No. 467,991
14 Claims. (Cl. 260—284)

1. The method of introducing the hydroxyethyl radical into a substance of the group that consists of the phenols, the mercaptans, amines containing reactive hydrogen, the alcohols, and the carboxylic acids, which consists in reacting such substance with an ethylene ester of a group that consists of ethylene carbonate and ethylene sulfite.



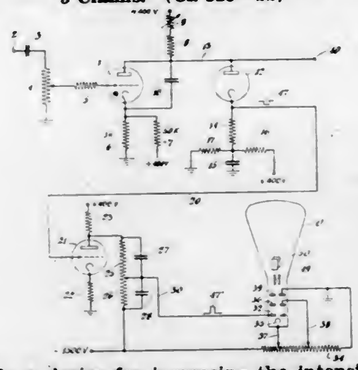
2,448,768
METHOD AND APPARATUS FOR MEASURING SURFACE TENSION
Hans M. Cassel, Plainfield, N. J.
Application March 29, 1945, Serial No. 585,411
10 Claims. (Cl. 73—53)

10. The method of measuring the interfacial tension of a liquid with a fluid bubble by means of a flat support having an aperture which comprises wetting the support with a quantity of the liquid to be measured which is just sufficient to cover entirely the support and to form a flat



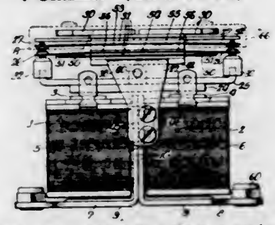
liquid lens, forcing a fluid bubble through the aperture into said lens, and determining the maximum pressure required to drive said bubble through the aperture.

2,448,769
FLUID-COUPLING ASSEMBLY
James M. W. Chamberlain, Fairlawn, Ohio
Application September 7, 1945, Serial No. 614,903
5 Claims. (Cl. 285—193)



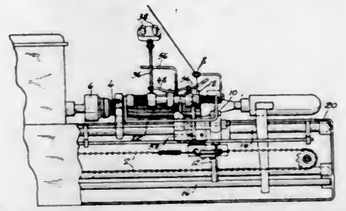
3. A fluid-coupling assembly comprising two pipes presented endwise to each other, a deformable, tubular sealing member mounted upon the adjacent pipe ends and bridging the joint between them, and an external backing for the sealing member, said backing comprising a radially contractible shell structure bridging the said joint and an endless ring surrounding said shell structure and holding it contracted, said ring having articulation to the elements of said shell structure for holding them in orderly relation when they are apart from the other elements of the assembly.

2,448,770
DRIER HEATING SYSTEM
Richard D. Cheesman, Allentown, Pa., assignor to Traylor Engineering & Mfg. Co., Allentown, Pa., a corporation of Delaware
Application June 15, 1943, Serial No. 490,920
4 Claims. (Cl. 263—15)



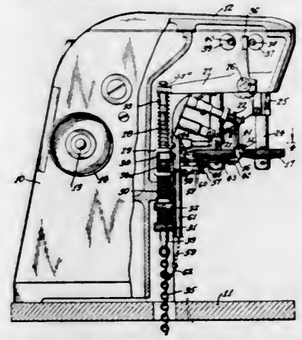
1. In combination, a kiln, means for supplying heat to the kiln, a drier for slurry to be fed to the kiln, a conduit for leading the hot gases from the kiln to the drier, a by-pass conduit, dampers in said conduits respectively, an auxiliary heater with variable output arranged to deliver to said first mentioned conduit, whereby to supplement the heat of said gases, and means for interdependently controlling said heater and dampers.

2,448,771
CATHODE-RAY OSCILLOGRAPH CIRCUIT
Peter S. Christaldi, Upper Montclair, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application September 23, 1943, Serial No. 503,502
3 Claims. (Cl. 315—22)



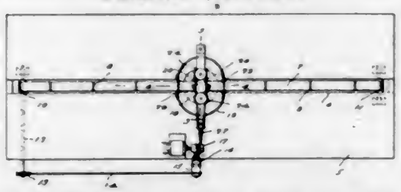
1. In a device for increasing the intensity of the cathode-ray beam in the cathode-ray tube of an oscillograph during the application of a sweep deflection potential to said cathode-ray tube, means for generating a rectangularly shaped pulse of potential during the interval of said sweep potential, said means comprising a sawtooth signal generator, an electron discharge device of which the space current is made to vary between two predetermined values corresponding substantially to the extreme potentials of said sawtooth signal, said electron discharge device being connected to the output of said sawtooth signal generator, a load resistor connected to the output of said discharge device and across which said current generates said rectangularly shaped pulse of potential, and means for coupling said rectangularly shaped pulse of potential to a current-controlling electrode of said cathode-ray tube.

2,448,772
DIFFERENTIAL RELAY
Carl P. Clare and George Weinreich, Chicago, Ill., assignors to Cook Electric Company, Chicago, Ill., a corporation of Illinois
Application November 26, 1943, Serial No. 511,814
7 Claims. (Cl. 200—98)



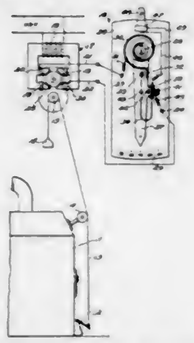
1. In an electromagnetic relay, a pair of spaced magnetic cores each having an energizing winding thereon, a heel piece for each core, said heel pieces being substantially of identical magnetic capacity throughout and having portions lying between said cores and windings and being positioned opposite to one another, and a sub-assembly carried by said heel portions, said sub-assembly including a yoke, and armature and a bracket, said bracket carrying said armature, and a pair of upstanding ears on said bracket for pivotally mounting said bracket and said armature upon said yoke.

2,448,773
BOBBIN MARKING MECHANISM
George Clark, Trenton, N. J.
Application July 2, 1946, Serial No. 681,100
5 Claims. (Cl. 242—1)



1. A bobbin marking device comprising marking means pivotally mounted adjacent a bobbin to be marked, cam means controlling operation of said marking means, a spring for urging said marking means toward said bobbin, and means actuated by said cam means for tensioning said spring means.

2,448,774
SEWING MACHINE
Martin L. Cook, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application December 28, 1946, Serial No. 719,059
13 Claims. (Cl. 112—18)

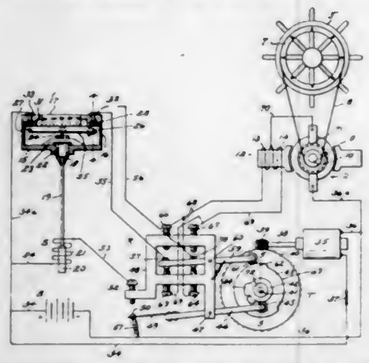


1. In a cup feed sewing machine having a main frame, a pair of feed cups adapted to engage and feed the work, a shaft connected with each of said cups for driving the same, one of said shafts having its axis in fixed relation to said frame and the other of said shafts having its axis shiftable in relation to the frame to separate the feed cups, a puller member arranged to cooperate with one of said feed cups, means carried by said frame for shiftably supporting said puller member, and treadle operated means for shifting the axis of said other of said shafts and concurrently shifting said puller member away from said one of said feed cups.

2,448,775
HONEYCOMB UNCAPPER
Dan S. Crane, Shelbyville, Ill., assignor to Robert Bruce Crane, Shelbyville, Ill.
Application April 29, 1944, Serial No. 533,356
2 Claims. (Cl. 6—12)

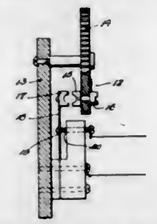
1. A honeycomb uncapping device including an elongated rigid table, a channel extending throughout the length thereof, a conveyor belt operating within the channel, said channnel being enlarged centrally, an enclosure encompassing said enlargement, a decapping means within the enclosure comprising a pair of spaced vertically disposed brushes between which said honeycombs may be continually passed on said conveyor.

2,448,776
THERMOSTATIC CONTROL AND SIGNALING DEVICE
George W. Crise, Columbus, Ohio
Application January 19, 1944, Serial No. 518,857
4 Claims. (Cl. 177—311)



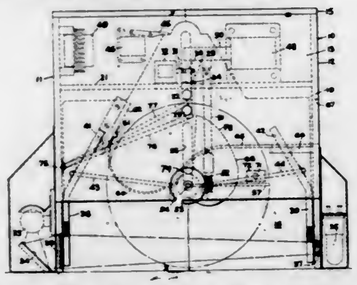
1. Temperature-controlling and indicating apparatus comprising a base, spaced terminals on said base adapted for connection with conductors forming a circuit in which is located an associated electrically operated heater control unit, a bimetallic element on said base electrically connected with the first of said terminals, said element having the free end movable in response to variations in adjacent temperatures, a resilient U-shaped switch member having a stationary arm and a movable arm, an adjustable contact supported in connection with said base and electrically connected with said second terminal, said contact being normally engaged with the movable arm of said switch member to complete said circuit when said movable arm is engaged by the free end of the bimetallic element, an electrically energized signal, a conductor leading from the fixed arm of said switch member to said signal and from the latter to the second of said terminals, whereby extreme deflection of said bimetallic element produces flexure of the movable arm of said switch member to separate the same from said adjustable contact and thereby divert current flow through said signal.

2,448,777
MASSAGING APPARATUS
George W. Crise, Columbus, Ohio
Application January 19, 1944, Serial No. 519,619
4 Claims. (Cl. 128—33)



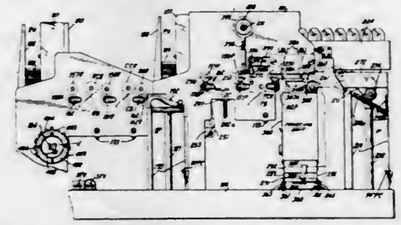
1. Massage apparatus comprising an elongated frame, a horizontal bed provided at the top of said frame composed of a plurality of parallel longitudinally extending relatively flexible slats, means for supporting said slats at their ends in connection with said frame, and means engaging the under sides of said slats for flexing the same longitudinally.

2,448,778
AUTOMATIC BOAT-STEERING MECHANISM
George W. Crise, Columbus, Ohio
Application November 23, 1944, Serial No. 564,828
9 Claims. (Cl. 318—489)



4. Automatic steering mechanism for marine craft comprising a reversible steering control-operating electric motor, the latter being provided with a pair of polarity-changing field coils, a compass switch for governing the controlled excitation of said coils, said switch embodying a casing comprising a base and a contact-carrying member adjustably mounted on said base, a magnetic north-seeking needle pivotally mounted for turning movement in said casing, a stationary contact on said casing member engageable with one end of said needle, a pair of electrically spaced stationary contacts carried by said casing and engageable with the other end of said needle, a movable support for said needle normally maintaining the latter out of engagement with said contacts, a conductor leading from each of said pair of contacts to one of said field coils, a return conductor leading from said motor to a source of electrical energy, a conductor extending from said energy source to the single stationary contact, a solenoid operative when energized to actuate said needle support to advance said needle into circuit-completing engagement with a pair of said contacts with which the needle registered immediately prior to the energizing of the solenoid, an operating circuit for said solenoid including said energy source, a periodically operating switch in said solenoid circuit for intermittently energizing and deenergizing the solenoid, and an intermittently operating reversing switch cooperative with the conductors leading from said compass switch to the field coils of said motor for alternating the excitation of said field coils when said motor circuit is closed by the operation of said magnetic switch.

2,448,779
SWITCH MECHANISM FOR AUTOMATIC STOKERS
George W. Crise, Columbus, Ohio
Application December 8, 1945, Serial No. 633,815
6 Claims. (Cl. 200—19)



1. In a mechanism of the character described, a time-operated switch comprising a rotatable element driven by chronometric motor means, an adjustable magnet attached to said rotatable element and movable thereon so as to cause a circular displacement of its magnetic field, a second magnet in spaced longitudinal relationship with the circumference of said rotatable element and having a resilient supporting body, and a pair of oppositely disposed contact terminals having an operating circuit, one of said contact terminals being rigidly attached to and movable with the resilient supporting body of the second magnet.

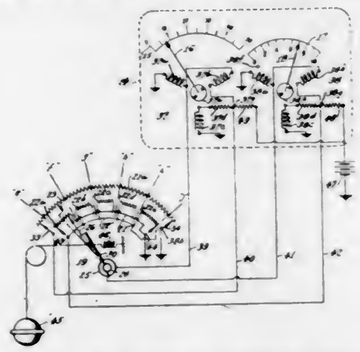
2,448,780
ANIMAL TRAP
Chester W. Crumrine, Irondequoit Township, Monroe County, N. Y., assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y., a corporation of New York
Application August 10, 1943, Serial No. 498,077
13 Claims. (Cl. 43—99)

1. An animal trap comprising a casing having an unobstructed animal passage extending therethrough and an adjacent disposal zone, closure means at opposite ends of said passage and means releasably retaining said closure means in elevated position whereby said closure means are adapted to drop to closed position upon release of said retaining means, depending pivoted sweeps extending longitudinally at opposite sides of said passage and means connecting said sweeps to said closure means whereby dropping of the latter is accompanied by movement of the sweeps toward each other to constrict the transverse area of said passage, and means movable to traverse the constricted passage and move an animal body therefrom to said disposal zone.

2,448,781
RECORD CONTROLLED MACHINE
George F. Daly, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application March 14, 1942, Serial No. 434,773
18 Claims. (Cl. 101—93)

2. In a machine controlled by records having data represented by designations in columns of index-point positions, each column having index-point positions representing a series of digits, one of said positions containing a designation to represent a selected digit; means to sense said designations in a single continuous cycle, means controlled by the sensing means and operative during one half of said cycle to store representations of said digits, a printing member movable between two limiting positions during the other half of the cycle while the sensing device is sensing the remaining index-point positions, and means controlled alternatively by the sensing device or by the storage device for stopping said printing member in a position represented by either a stored designation from the first half or by a designation in the second half of the column.

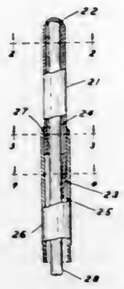
2,448,782
COMPOSITE STRAND AND FABRIC
Archibald H. Davis, Washington, D. C.
Application May 14, 1945, Serial No. 593,693
4 Claims. (Cl. 57—140)



1. A composite textile strand comprising an organic plastic fiber and at least one glass fiber intertwisted therewith in contact with a portion only of the surface of the organic plastic fiber, the relative twist of the glass fiber being greater than that of the organic plastic fiber by an amount sufficient to project the glass fiber to the periphery of the strand.

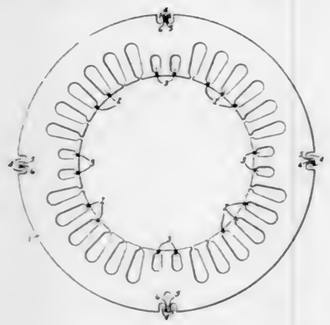
2,448,783
ELECTRICAL VERNIER TYPE TELEMETRIC INDICATING SYSTEM
Clarence A. de Giers, Forest Hills, and Louis M. Campani, Freeport, N. Y., assignors to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware
Application September 29, 1944, Serial No. 556,330
3 Claims. (Cl. 177—351)

1. Telemetric device comprising an electrically controlled indicating means including a permanently magnetized rotor and a plurality of deflecting coils effective to control the position of



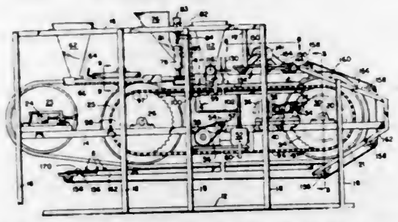
said rotor for coarse indications, said indicating means being calibrated to indicate a range including a plurality of units to be measured, a similar electrically controlled indicating means including a permanently magnetized rotor and a plurality of deflecting coils effective to control the position of said rotor for fine indications, said fine indicating means being calibrated to indicate one unit of the total range of the coarse indicating means on an enlarged scale; controlling means including a resistor electrically connected in a circuit with the deflecting coils of said coarse indicating means and a source of current, a plurality of resistance elements connected in parallel in a circuit with the deflecting coils of said fine indicating means and said source of current, corresponding terminals of each of said resistance elements being at the same potential, said resistance elements being equal in number with the number of units measured by the coarse indicating means, a contact slidably engaging the resistor for changing the effective resistance value thereof, a second contact constructed to slidably

engage successive resistance elements for changing the effective resistance value of the engaged resistance element, said resistance elements all having the same total resistance but being so wound, disposed and arranged as to extend over portions of said controlling means corresponding respectively to predetermined equal ranges of the variable physical magnitude to be indicated independently of the lengths of the respective portions of the path of said second contact subtended by said ranges, so as to provide accurate indications of said magnitude on a uniformly calibrated scale on said indicating means, means adapted to be controlled by a variable physical magnitude to be measured for simultaneously and similarly moving both slider contacts, said contact moving means being arranged and adjusted so as to move the second slider contact over the entire length of one of said resistance elements thereby causing the fine indicating means to move through its total range when and while the first slider contact is moved over a single section of said resistor causing the coarse indicating means to move through one of the units thereof.



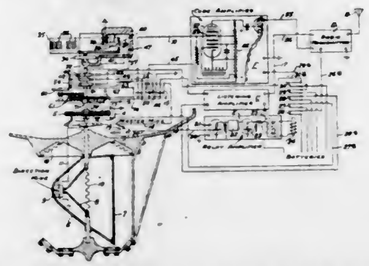
2,448,784
THERMAL-MECHANICAL ELEMENT
Horace Dickinson, South Gate, Calif.
Application April 12, 1947, Serial No. 741,100
7 Claims. (Cl. 297—14)

1. A thermal-mechanical element comprising a metallic tube one end being adapted to form a zone for exposure to temperature changes, a portion of said tube away from said exposure zone being cut to form a longitudinal tongue adapted for attachment to a central rod; a central rod of metal secured at one end to the inside of said tube at the outer end of said exposure zone, said rod



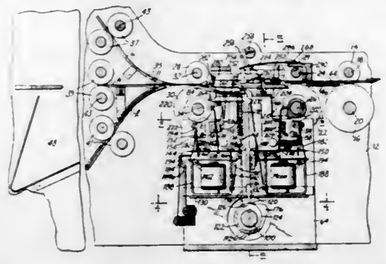
also being attached to said longitudinal tongue; and said tube and said rod having different amounts of linear expansion with changes in temperature.

2,448,785
LAMINATED CORE CONSTRUCTION
Loyd M. Dolan, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application May 3, 1945, Serial No. 591,692
8 Claims. (Cl. 171—252)



6. An electrical device core including an assembly of a plurality of laminations of magnetic material with a plurality of sets of relatively deep winding slots and a plurality of sets of relatively shallow winding slots formed in the inner edge of said core, said shallow winding slots being arranged intermediate adjacent sets of said relatively deep slots and providing a relatively wider core section between the base of said shallow winding slots and the outer periphery of said core than said relatively deep slots, pairs of closely spaced shallow notches in the edge of each of said core laminations opposite said sets of relatively shallow winding slots forming relatively narrow short teeth extending longitudinally of the outer peripheral surface of said assembled core laminations, the outer edge of said tooth being below the outer periphery of said core laminations, and shallow welds of the outer edges of said laminations along the outer end of said teeth for securing together said laminations in assembled relationship.

2,448,786
CONFECTIONERY FORMING MECHANISM
Charles E. Faxon, Republic, Wash.
Application June 8, 1946, Serial No. 675,488
6 Claims. (Cl. 107—8)

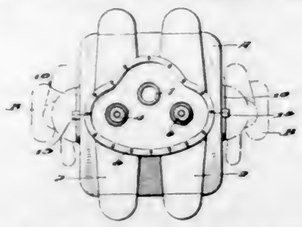


1. A machine for forming confections, comprising: a frame; supported in said frame for rotation about a horizontal axis, a pair of wheels spaced apart from each other; an endless belt enclosing said wheels, said belt having on its exterior face a series of bottom-vented cup-like depressions; a resilient membrane enclosing said belt; means for causing said belt and membrane to travel about the path defined by said wheels; means forming a vacuum chamber beneath the upper flight of said belt; means for evacuating said chamber; means above said belt and said vacuum chamber for depositing confection material in cups formed in the membrane by the action of negative pressure through the bottom vents of the cups of said belt; and an endless retainer belt operable against the face of said membrane from a position above a portion of said chamber to a point substantially therebeyond to retain in said cups, for setting, confections thus produced.

2,448,787
APPARATUS FOR DETECTING AND LOCATING ENEMY VESSELS
Clyde B. Ferrel, San Francisco, Calif., assignor to Ferrel Industries, Inc., Reno, Nev., a corporation of Nevada
Continuation of application Serial No. 423,994, December 22, 1941. This application August 18, 1944, Serial No. 550,060
34 Claims. (Cl. 177—386)

1. An apparatus for detecting and locating vessels, comprising a buoy anchored at a known location, a code amplifier and a listening amplifier both connected with a radio transmitter and all carried by the buoy, a sound detector connected with the listening amplifier, a pair of code transmitters connected with the code amplifier, one of said code transmitters transmitting a code indicating the line of direction of a detected vessel and the other code transmitter transmitting a code whereby a buoy transmitting is identified.

2,448,788
MACHINE FOR SORTING CARDS PERFORATED IN ALPHABETICAL CODE
Eugene A. Ford, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application May 3, 1947, Serial No. 745,835
7 Claims. (Cl. 209—110)



1. In a cyclically operable sorting machine for record cards having zone and numeric index points and including sensing means for sensing numeric and alphabetic perforations occurring at said index points, a plurality of card-receiving stations, a plurality of sorting blades forming passages for directing the cards to said stations, said blades being biased so as to normally assume lowered positions, a plurality of blade lifters, one for each blade, each lifter being movable from a lowered position through an intermediate or partially elevated position to a fully elevated position wherein it engages its respective blade to elevate the same, said blades and their respective lifters being separated into numeric and alphabetic zones, means operable during each card cycle for moving said lifters from their intermediate positions to their lowered positions in each zone in seriatim simultaneously in unison, a holding latch movable from a retracted position to an advanced position wherein it engages the partially elevated lifters of the alphabetic zone to maintain the same partially elevated, a numeric zone latch movable from a retracted position to an advanced position wherein it engages the partially elevated lifters in the numeric zone to maintain the same elevated, an alphabetic zone latch movable from a retracted position to an advanced position wherein it engages the partially elevated lifters in the alphabetic zone and maintains the same partially elevated, means operable upon sensing of a numeric perforation in a record card to project the numeric zone latch and the holding latch substantially simultaneously, means operable upon sensing of an alphabetic perforation in a record card for projecting said alphabetic zone latch, and means operable near the end of each card cycle for elevating the projected zone latches.

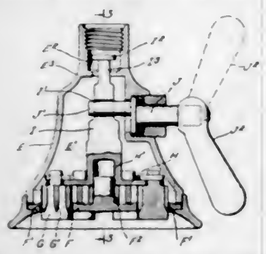
2,448,789
SUPERCHARGED MULTIPLE MOTOR INTERNAL-COMBUSTION UNIT FOR AIRCRAFT
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, England
Original application May 16, 1942, Serial No. 443,231. Divided and this application November 17, 1943, Serial No. 510,669
1 Claim. (Cl. 60—97)

A power unit for aircraft and the like, comprising two internal combustion motors having a common crankcase one end wall of which terminates in a facing with the crankshaft ends ex-

tending through said end wall, whereby housings containing different types of gearing may be detachably mounted over said facing, the side walls of said crankcase near the other end wall having faced openings, whereby superchargers may be detachably secured to the facings of said openings, an extension housing detachably secured to

said end wall facing, said extension housing having side faced openings over which superchargers may be detachably disposed, crankshaft extensions disposed in said housing and extending through the forward wall thereof, and means on said crankshaft extensions for driving the superchargers when they are attached.

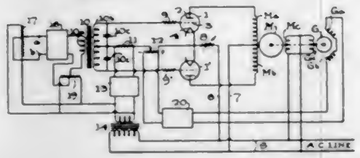
2,448,790
PROCESS FOR THE PRODUCTION OF PENICILLIN
Jackson W. Foster and Lloyd E. McDaniel, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application May 15, 1943, Serial No. 487,140
13 Claims. (Cl. 195—36)



1. A process for the production of penicillin which comprises subjecting an aqueous medium containing inorganic nutrient salts and a carbohydrate of the class consisting of molasses and brown sugar to the action of a penicillin-producing strain of a mold belonging to the genus Penicillium, under aerobic submerged conditions, while maintaining a pH of about 6.0–8.5.

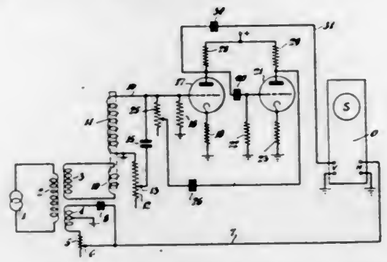
2,448,791
PRODUCTION OF PENICILLIN IN COTTONSEED MEAL MEDIUM
Jackson W. Foster, New York, N. Y., and Lloyd E. McDaniel, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application January 22, 1946, Serial No. 642,748
12 Claims. (Cl. 195—36)

4. The process for the production of penicillin which comprises propagating a penicillin-producing strain of *Penicillium notatum* in an aqueous medium containing cottonseed meal under aerobic submerged conditions, the pH of said aqueous medium, during said propagation, falling within the range 6.0 to 8.5.



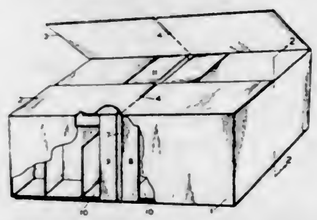
2,448,792
SHOWER HEAD
James Fraser, Wilmington, Del., assignor to Speakman Company, Wilmington, Del., a corporation of Delaware
Application June 25, 1946, Serial No. 679,171
4 Claims. (Cl. 299—144)

1. In a shower bath spray head, the combination with a chambered showerhead body formed with an inlet port and with one or more outlet openings, of flow obstructing means comprising a discharge obstructing member extending into each such opening and adjustable therein between one position in which it makes the unobstructed flow area through said opening relatively small and a second position in which it makes said area relatively large through intermediate positions in which said flow area is increased and decreased by said member as the latter is adjusted respectively toward and away from said second position, a supply obstructing member adjustable relative to said port to vary the unobstructed flow area through said port and



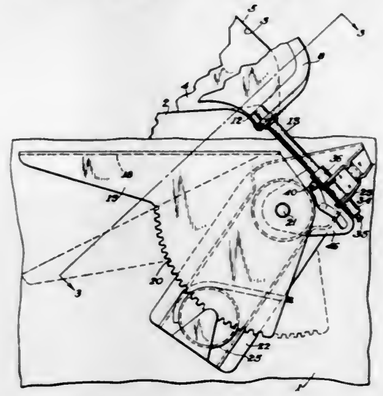
actuating mechanism operatively connected to each of said members for adjusting each of the latter, said obstructing means, inlet port, outlet opening or openings and mechanism being so relatively arranged that when said discharge obstructing member is in said one position and in said intermediate positions said supply obstructing member is in a position in which it makes the unobstructed flow area through said port relatively large and when said discharge obstructing member moves into and out of said second position, it abruptly decreases and increases the unobstructed flow area through said port, respectively.

2,448,793
RECTIFIER FED MOTOR SYSTEM
Paul Glass, Chicago, Ill., assignor to Askania Regulator Company, a corporation of Illinois
Application August 17, 1943, Serial No. 498,998
6 Claims. (Cl. 318—257)



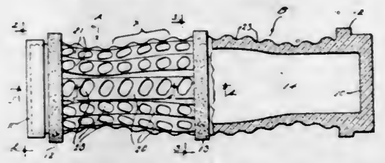
1. A speed control circuit comprising, in combination, a motor, a source of alternating current, a gaseous discharge tube having an anode circuit and a grid circuit, said anode circuit being connected to supply current to said motor from said source, means for supplying a biasing voltage to said grid circuit from said source substantially opposite in phase to the anode voltage of said tube and having a value sufficient to prevent firing of said tube in the absence of a signal, means for supplying to said grid circuit an alternating current signal voltage leading the anode voltage by substantially 90° to cause firing of said tube, and speed responsive means driven by said motor for applying to said grid circuit a direct current biasing voltage to negatively bias the grid of said tube by an amount which varies directly with the speed of said motor.

2,448,794
DEVICE FOR TESTING MAGNETIC MATERIALS
Thomas T. Goldsmith, Jr., Cedar Grove, and Estle Ray Mann, Upper Montclair, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application June 4, 1943, Serial No. 489,652
4 Claims. (Cl. 175—183)



1. A device for testing specimens of magnetic materials by examining their magnetic properties, which comprises a high frequency vacuum tube oscillator having an inductance coil in the oscillator circuit thereof with a condenser in parallel with said coil, one end of said coil and the corresponding side of said condenser being grounded, an inductance coil aligned with said first named coil, said coils being adapted to be coupled magnetically by the specimens of material to be tested, means to produce low frequency oscillations in said second named inductance coil and an oscillograph having one set of deflection plates connected to the output of said high frequency oscillator and another set of deflection plates connected to said means which produces low frequency oscillations whereby a visible pattern is produced on said oscillograph which is characteristic of the magnetic properties of said material.

2,448,795
DIVISIBLE CARTON
Louis P. Greeco, Portland, Oreg.
Application May 24, 1946, Serial No. 672,094
1 Claim. (Cl. 229—28)

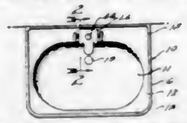


A divisible carton for bottles, comprising a hollow rectangular fiberboard box having single thickness top, bottom and end walls save for gluing overlaps, two duplicate compartmented fillers therein, said fillers comprising back to back transverse partitions with glue flaps attached to the sides of the box, a compartmented filler secured to each partition, said fillers unattached to the box, and of such size that they tend to support the box from the inside, and being of less height than the inside of the box to leave the bottle necks projecting above the filler when the tops are opened.

2,448,796
WINDOW REGULATOR FOR AUTOMOBILES AND THE LIKE
Leo S. Greenmun, Cleveland, Ohio
Application November 18, 1944, Serial No. 564,071
7 Claims. (Cl. 296—44)

1. In a window assembly for vehicles, the combination of a window opening, a deflector window panel swingable about a substantially vertical axis, a pivotally mounted main window panel completely closing such opening and rotatable in a substantially vertical plane, which plane is parallel to and removed from the plane of the deflector panel in its fully closed position, a single regulator for adjusting both panels, and means responsive solely to rotation of the regulator for rotating both panels simultaneously.

2,448,797
DEVICE FOR EXERCISING AND TREATING FEET
Walter Gustlin, Elsinore, Calif.
Application September 6, 1943, Serial No. 501,353
3 Claims. (Cl. 128—24.3)

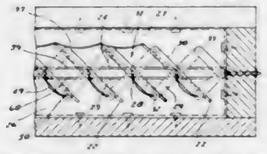


1. A device of the character described including an elongate hollow body having spaced roller portions and a tread portion between the roller portions and concentric therewith, there being longitudinal ribs projecting from the tread portion, the crest portion of each rib having diagonally disposed notches, the ribs being uniformly spaced around the tread portion and the notches being uniformly spaced and equally pitched.

2,448,798
LAVATORY SUPPORTING BRACKET
Alfred H. Haberstump, Detroit, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a corporation of Delaware
Application December 23, 1944, Serial No. 569,583
1 Claim. (Cl. 4—170)

A lavatory having a top platform portion and a bowl extending downwardly therefrom contain-

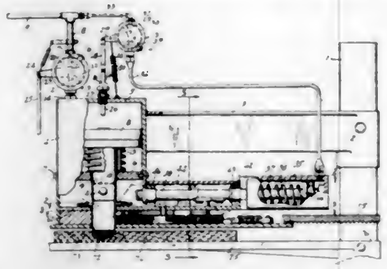
ing a drain aperture, an apron extending downwardly from said platform portion at the front and at the sides, a flange extending downwardly at the rear of the lavatory, an angle-shaped bracket disposed medially of the apron portions at the side of the lavatory having a wide web portion in the plane of the flange for engagement with the wall upon which the lavatory is supported, said bracket having a frontwardly projecting portion containing an aperture aligned with the



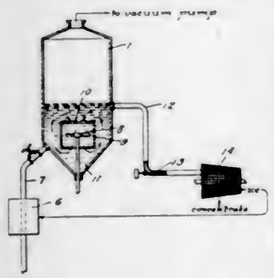
drain aperture of the bowl, a tubular fitting projecting through said bowl and said bracket apertures in secured and sealed relation thereto, a hanger secured to the wall and having an outwardly projecting lip for receiving said flange at the rear of said platform portion, said bracket having an offset adjacent to said flange with a portion engaging the surface of the flange to which it is spot-welded, said offset forming a recess below the flange for receiving said hanger.

2,448,799
ETHYLENE POLYMER COMPOSITIONS
William B. Happoldt, Jr., Arlington, and Alfred Stockfleth, North Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 3, 1945, Serial No. 626,572
7 Claims. (Cl. 260—23)

1. A plastic composition essentially comprising a mixture consisting of polythene and, by weight of said mixture, 2%–30% of a microcrystalline hydrocarbon wax, and 0.1%–10.0% of a metal salt of a long chain fatty acid.



2,448,800
WINDOW SHADE
Walter Arnold Harju, Daly City, Calif.
Application April 17, 1945, Serial No. 588,863
3 Claims. (Cl. 160—168)

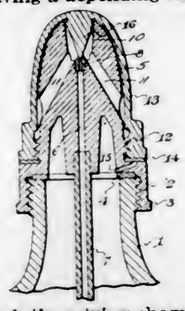


3. A screen formed of a series of vertically suspended slats, means for opening and closing the same, means whereby the slats will normally overlap when in operative position, means whereby said slats may be held angularly adjusted in said operative position, a toggle device from which the slats are pivotally suspended, and said overlapping means comprising springs connecting parts of the toggle member.

2,448,801
MACHINE FOR SEVERING AND DRIVING CORRUGATED FASTENERS
Albert E. Cranston, Jr., Portland, Oreg.
Application July 31, 1945, Serial No. 608,019
7 Claims. (Cl. 1—8.1)

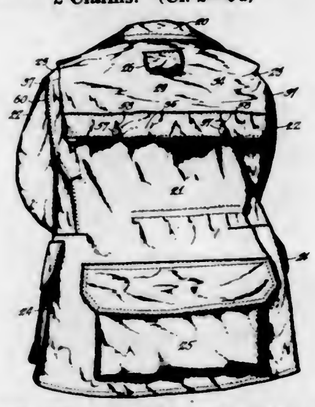
1. A machine for severing and driving corrugated fasteners, said machine comprising means for supporting work pieces in position to receive a fastener, fluid pressure actuated means for advancing a supply strip of fastener material through a cutting mechanism and means operable by said pressure actuated means for severing the supply strip to form a fastener of predetermined length, and means for driving said fastener into the work pieces.

2,448,802
METHOD FOR CONCENTRATING AQUEOUS SUSPENSIONS AND SOLUTIONS
Richard Holzcker, Lake Wales, Fla., assignor to Florida Frozen Fruits, Inc., a corporation of Florida
Application December 29, 1944, Serial No. 570,428
5 Claims. (Cl. 62—124)



4. Method for concentrating fruit juice and the like comprising cooling the juice to the point of ice formation by the evaporation of some of its water under vacuum, continuing the application of vacuum until a sufficient fraction of the partially concentrated juice has been frozen to substantially pure water ice crystals to bring the mass to a state of wet slush, and separating the remaining liquid content from the ice crystals.

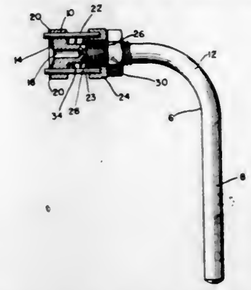
2,448,803
NASAL SPRAYER
James F. Hunter, Tulsa, Okla.
Application January 30, 1947, Serial No. 725,189
1 Claim. (Cl. 128—239)



A nasal spray nozzle comprising a body member adapted to be placed on a receptacle, a discharge port through said nozzle, a discharge orifice above said discharge port, the upper end of said nozzle above the orifice having an upwardly flared mixing chamber, upwardly converging gradually diminishing air ports at opposite sides of the discharge port and terminating in the lower end of the mixing chamber adjacent the discharge orifice, an annular shoulder carried by the lower end of the nozzle, an air vent extending through said shoulder, a gasket on said shoulder

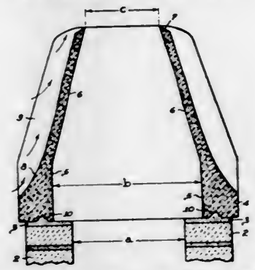
normally covering the air vent, a closure cap for said nozzle threaded on the nozzle above the shoulder and cooperating with the gasket, said closure cap having a depending tapered valve ex-

tending through the mixing chamber and cooperating with the orifice for closing the orifice and preventing leakage when the cap is threaded onto the nozzle.



2,448,804
HUNTING AND FISHING GARMENT
Harry M. Hutchinson, Carlisle, Pa., assignor to C. H. Masland & Sons, Carlisle, Pa., a corporation of Pennsylvania
Application September 28, 1946, Serial No. 700,114
2 Claims. (Cl. 2—94)

1. A coat having a collar and a back, provided with a ventilation opening below the collar and between the shoulders, a generally rectangular cape extending across the back from shoulder to shoulder, secured at the top to the coat, covering the ventilation opening and open at the bottom, said cape having sides which stand out from the coat, are closed at the lower portion of the sides and are provided with side ports in the sides and, gutters, one secured to the back of the coat on each side of the ventilation opening inside the cape adjoining each side port and adapted to divert moisture entering the side ports away from the ventilation opening and to the open bottom.

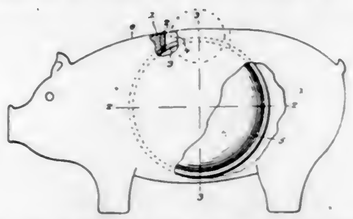


2,448,805
ADJUSTABLE DETENT WRENCH FOR SCREW CALKS
Bernard Ingram, Berkeley, Calif.
Application August 10, 1946, Serial No. 689,759
3 Claims. (Cl. 81—90)

2. A screw calk wrench consisting of a handle bent to form a crank; a head formed as part of said handle and having a greater diameter than said handle; a screw thread on said handle adjacent said head, the root diameter of said screw thread being greater than the diameter of said handle; a plurality of detent openings passing through said head parallel to the horizontal axis of said screw thread; an engaging surface on the outer face of said head having

means for centering said wrench; a plurality of detents disposed for reciprocation in said detent openings; an annular detent ring to which said detents are secured in parallel relationship and to slidably engage said screw thread; a positioning nut operable on said thread to position said base ring and means urging said annular detent ring against said nut.

2,448,806
CHIMNEY CAP
Ezra W. Kepple, Greensburg, Pa.
Application March 5, 1945, Serial No. 581,100
4 Claims. (Cl. 98—67)

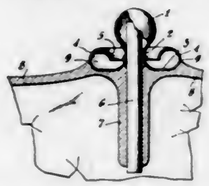


1. In combination with a chimney top having a single normal flue opening, a superimposed rectangular cap mounted thereon having a substantially reinforced supporting base and upwardly and inwardly inclined walls converging towards a terminal exit opening between bevel edge wall terminals and surrounding a lowermost maximum circulation area greater than that of the flue and converging to said terminal opening of an area less than that of the flue, the corner portions of the cap having freely exposed outwardly extending wind arresting and guiding extensions continuous from the reinforced base to the wall terminals.

2,448,807
FATTEN-THE-PIG SAVINGS BANK
June W. Kimball, Athens, Ohio
Application October 18, 1946, Serial No. 703,962
4 Claims. (Cl. 46—2)

1. In a savings bank in the form of an animal with a circular hole initially open at opposite

sides thereof, a coin slot in said bank, a cylinder in said hole, a slot in said cylinder in alinement with the slot in said bank, a pair of hemispheres positioned in said cylinder, half slots in said hemispheres to form a slot coinciding with the



slot in the cylinder, and a covering of flexible cloth for the animal, adapted to cover said holes in the sides and to be expanded by said hemispheres when a number of coins are placed in said bank.

2,448,808

CONTACT TERMINAL FOR VACUUM TUBES

Stanley J. Koch, Clifton, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware

Application May 2, 1945, Serial No. 591,465
2 Claims. (Cl. 250—27.5)

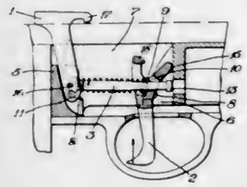
1. A metal contact terminal anchored in the wall of a glass tube, which comprises an integral hollow metal head and neck, the lower end of said neck merging into a metal disc the edge of which terminates in an annular inturned flange surrounding said neck, a metal rod tightly fitting in said neck and passing through said wall, and a glass tube integral with said wall fused on said rod on the opposite side of said wall from said head to hold said tube securely on said rod.

2,448,809

PROCESS FOR PREPARING HOMOGENEOUS PARTIALLY CHLORINATED DERIVATIVES OF RUBBER

Carel Koningsberger, Delft, Netherlands, assignor to Rubber Stichting, Amsterdam, Netherlands

No Drawing. Application October 1, 1945, Serial No. 619,690. In the Netherlands July 29, 1944
4 Claims. (Cl. 260—772)



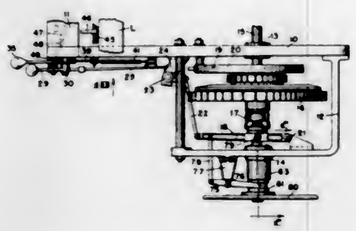
1. A process for preparing homogeneous, partially chlorinated derivatives of hydrocarbon rubbers, selected from a class consisting of natural rubber, balata and gutta percha, said derivatives containing from about 5 to 50% of chlorine, which comprises mixing a solution of such a hydrocarbon rubber with sulphuryl chloride while maintaining the temperature below about 10° C. so that no substantial reaction takes place and thereafter heating the mixture to reaction temperatures of the order of 40° to 60° C. until the reaction is substantially completed.

2,448,810

REMOVABLE TRIGGER HOUSING GROUP FOR FIREARMS

Josef Koucký and František Koucký, Prague, Czechoslovakia, assignors of one-third to Zbrojovka Brno Narodni Podnik, also named Brno Arms Factory, National Corporation, Prague, Czechoslovakia, a corporation of Czechoslovakia

Application January 20, 1948, Serial No. 3,198
In Czechoslovakia January 23, 1947
7 Claims. (Cl. 42—69)



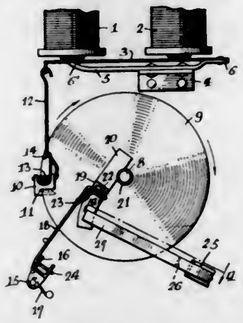
1. A removable trigger and hammer releasing mechanism for firearms, comprising a hammer and a trigger cooperating therewith each being provided with a cross pin permitting a swing movement of said hammer and trigger, a U-shaped bearing for each of said pins, the opening of the two U-shaped bearings being directed against each other, and a compression spring arranged between and acting upon said hammer and trigger.

2,448,811

HANDWHEEL FOR LOOMS

Alexander C. Krukonis, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application October 29, 1945, Serial No. 625,321
8 Claims. (Cl. 139—1)



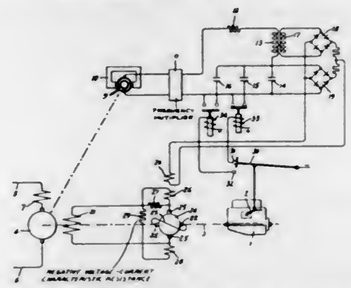
1. In a loom having a shaft which turns during loom operation to reciprocate a lay and in which the shaft and lay are at rest when the loom is not operating, shipper mechanism controlling operation of the loom and movable to running and stopping positions, loom protector mechanism to move the shipper mechanism from running to stopping position by a force derived from the lay upon improper presence of a shuttle in the warp shed, a stationary bearing surrounding the shaft, a hand wheel rotatable on and slidable longitudinally along said bearing axially of the shaft, and connections between said shipper mechanism and said hand wheel effective when the shipper mechanism is moved to stopping position by the protector mechanism to move the hand wheel bodily axially of the shaft and connect the hand wheel operatively to the shaft.

2,448,812

ELECTRIC TIMING MOTOR

Joseph Lemire, Drummondville, Quebec, Canada, assignor of fifty per cent to Nobert Boisvert, Drummondville, Quebec, Canada

Application September 30, 1946, Serial No. 700,264
2 Claims. (Cl. 172—126)



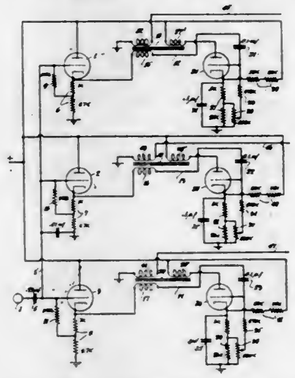
1. In an electric motor, an electromagnet, an armature adapted to be vibrated thereby, a disk rotatably mounted adjacent to said armature, a slotted plate engaging the periphery of said disk, with the periphery received in the slot of the plate, and a link connection extending from said armature and pivotally attached to said plate, and a spring between said plate and link connection and tensioned oppositely to the attraction direction of said armature, whereby to space the walls of said slot from said disk when said armature is released from said magnet.

2,448,813

POWER SYSTEM

Thomas X. Lewis, Rugby, England, assignor to General Electric Company, a corporation of New York

Application December 29, 1945, Serial No. 638,377
In Great Britain November 17, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 17, 1964
13 Claims. (Cl. 290—17)



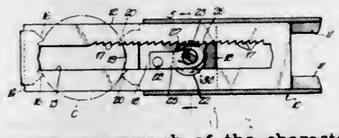
1. A power system including a prime mover having a throttle control, a main generator, means for providing a source of alternating current responsive in frequency to the speed of said main generator, means including a resonant circuit connected to said alternating current source and arranged to provide a predetermined voltage at a predetermined frequency of said alternating current source corresponding to a predetermined speed of operation of said main generator, and means responsive to the voltage of said resonant circuit for providing a predetermined excitation to said main generator maintaining a predetermined loading thereon for a given setting of said throttle.

2,448,814

DEVICE FOR SELECTING METAL PIECES

Estle Ray Mann, Upper Montclair, and Thomas Toliver Goldsmith, Jr., Cedar Grove Township, Essex County, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware

Application July 12, 1944, Serial No. 544,608
5 Claims. (Cl. 209—81)

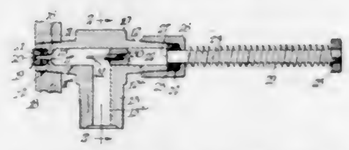


1. A device for separating metal pieces of the same shape and size but having different core losses when subjected to alternating magnetic fields, which comprises a series of blocking tube oscillators connected in parallel and so adjusted that a stronger pulse is required to cause each one in said series to oscillate than is required for the preceding one, relays connected to the outputs of said oscillators and adapted to be closed seriatim by said oscillators, and means controlled by said relays to sort said metal pieces in accordance with their having high, medium or low core losses when subjected to said fields.

2,448,815

SCREW COVER WRENCH

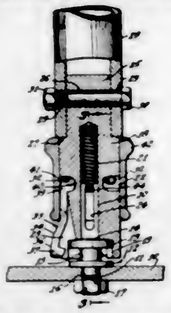
Edgar H. Mattocks, Chicago, Ill.



Application October 23, 1944, Serial No. 559,988
4 Claims. (Cl. 81—3.42)

4. A screw cap wrench of the character described comprising an elongated open ended casing provided with a transversely disposed slot; an elongated lengthwise slotted plate slidable in the casing with its forward end disposed beyond the casing and provided with a rearwardly disposed cap-engaging surface, one side wall of the elongated slot having a plurality of teeth; a second plate provided with a circular hole and arranged in the casing beneath and slidingly supporting said slotted plate, the forward end of said second plate extending beyond the casing and provided with a cap-engaging surface; a spring controlled pawl arranged on said second

plate within the slot of the first plate and normally engaging said teeth to control the outward sliding movement of the first plate while permitting the latter to slide inwardly; a rotatable cam action disc arranged in the circular hole in said second plate; a finger operated member extending to the casing exterior and connected with said disc whereby the latter may be rotated and the second plate advanced into cap-binding position, said member also extending through an opening in said pawl to pivotally maintain the latter in place; and a pin projecting from said pawl and disposed through the casing slot whereby the pawl may be moved out of engagement with said teeth and the first plate permitted to slide outwardly.

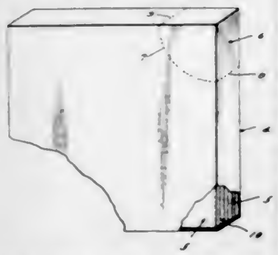


2,448,816
CONTINUOUS BLOWOFF VALVE FOR STEAM BOILERS
Henry E. May, Chicago, Ill., assignor to Dearborn Chemical Company, Chicago, Ill., a corporation of Illinois
Application October 27, 1944, Serial No. 560,666
2 Claims. (Cl. 251—29)

1. A blow off valve embodying therein a valve body having aligned water inlet and plunger receiving branches at opposite ends thereof and a water outlet branch leading from said body between said branches, a cross wall in and spaced from the extremity of said inlet branch and having an axial opening therethrough and defining a recess in the associated end of said inlet branch, a plug located in said recess with one end engaged with said cross wall and having an axial flow orifice therethrough in line with said opening in said cross wall, a plunger arranged for longitudinal movement in said valve body toward and away from said cross wall and passing through and extending beyond packing means in said plunger receiving branch of the body, and a point carried by one end of said plunger and capable of passing through said opening in said cross wall and through said orifice in said plug for removing accumulated foreign matter from and outwardly through the extremity of said orifice passage when said plunger is moved toward said cross wall.

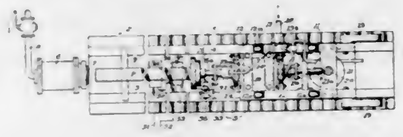
2,448,817
FASTENING DEVICE
Warren McArthur, Bantam, Conn., assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States
Application November 11, 1944, Serial No. 562,987
8 Claims. (Cl. 287—20.5)

8. In a device of the class described, a body having at least one recess and a plurality of spaced grooves intersecting said recess formed therein, a member carried by said body and movable therealong, a plurality of hook elements, at least one part of each hook element being disposed in said recess and another part registering with a corresponding groove, resilient means engaging a part of each element in the region of said recess to form a hinge connection with said hook element and said recess, said hook elements and said means being so constructed and arranged that a portion of each hook element is swung about said hinge connection in a direction



away from the body in response to predetermined movement of the member along said body in one direction, and in a direction toward the body upon predetermined movement of the member along said body in the opposite direction.

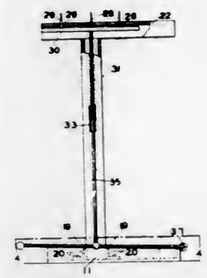
2,448,818
PROCESS OF ISOLATING LOW-METHOXYL PECTINIC ACIDS
Rolland M. McCready, Harry S. Owens, and William D. Maclay, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 14, 1945, Serial No. 616,445
10 Claims. (Cl. 260—209.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process comprising adjusting an aqueous solution of a low-methoxyl pectinic acid to a pH not exceeding about 2 with a mineral acid thereby to precipitate the low-methoxyl pectinic acid, and separating the low-methoxyl pectinic acid from the acidified solution.

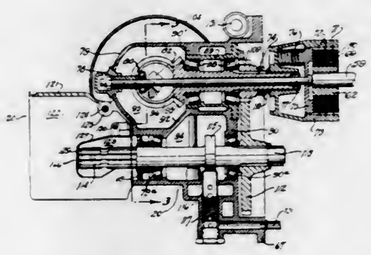
2,448,819
POCKET-TYPE TISSUE CONTAINER
William A. J. Mitchell, Appleton, Wis.
Application December 20, 1944, Serial No. 569,051
2 Claims. (Cl. 206—57)

2. A pocket-sized paper handkerchief packet of the class described comprising a pocket-size paper stock handkerchief packaging and dispensing container, said container being substantially flat and rectangular in form, a predetermined corner portion of the marginal rim of said container being provided with transversely extending straight across score lines, one of said lines being on one side of and spaced from said corner portion and the other line being spaced from and on the opposite side of said corner portion, arcuate score lines formed in opposed side walls of the container at said corner portion and having their ends adjoining adjacent ends of said first named score lines and defining therewith a readily separable and removable four-walled corner-cap, said cap, when torn out and removed, providing a completely open corner permitting access to be had to the interior of the container, and substantially square-shaped handkerchiefs in said container removable through said open corner after the corner-cap has been detached, each handkerchief being folded into symmetrical halves, and then again folded transversely intermediate the ends of said halves to provide quarter folds, said handkerchiefs being arranged in the container so that the coacting folds provide a pointed corner grip which is exposed when the cap is removed, whereby to facilitate the step of grasping said corner grip and withdrawing the handkerchief, without tearing, through said corner-opening.



2,448,820
PIPE TESTING APPARATUS
Arthur Motycka, Beaver, Pa., assignor to Pittsburgh Tube Company, Monaca, Pa., a corporation of Delaware
Application March 11, 1946, Serial No. 653,649
6 Claims. (Cl. 73—37)

1. In a pipe testing machine of the type having two fittings between which a length of pipe to be tested is supported, one of said fittings being mounted on a carriage which is movable toward and away from the other fitting, said carriage being provided with means including a cylinder fixed to the carriage and a piston in the cylinder for moving the fitting which is carried thereby, there being a piston rod between the piston and the fitting, the herein described invention which comprises providing said piston rod with a rearwardly extending projection, and a mechanical back-up means on the carriage movable into and out of engagement with the projecting end of the piston rod.



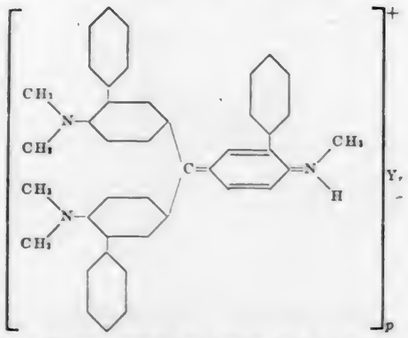
2,448,821
BAG HOLDER
John E. Murphy, Denver, Colo.
Application March 1, 1946, Serial No. 651,093
1 Claim. (Cl. 248—97)

A bag holder including a top frame, a bottom frame, each of said frames comprising two halves adjustably connected with each other, a vertical channel post fastened to each half of the bottom frame and supporting a half of the top frame, a plurality of vertically movable spikes normally extending through and above each half of the top frame, a plate underneath each half of the top frame and supporting the spikes extending therethrough, a vertical slot in the intermediate portion of each post, a release rod extending vertically downwardly from each plate on the inside of the post, then laterally through the slot in the post, and then vertically downwardly on the outside of the post to the bottom of the bag holder, a treadle connected to the lower extremity of both release rods and adapted to move them and the spikes downwardly, and

a spring anchored to the top frame and connected to the lateral portion of each release rod for urging the release rod upwardly to hold the spikes in normal position.

2,448,822
POWER TAKE-OFF DRIVE UNIT
Charles P. Pinardi, Dearborn, and Harold L. Brock, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application December 29, 1944, Serial No. 570,292
1 Claim. (Cl. 74—11)

A power takeoff unit, comprising: a housing having a mounting flange at one end thereof; partition means in said housing dividing the same into a gear chamber and a pump chamber; an operating shaft journaled in said gear chamber and having one end projecting forwardly from said housing; a transverse shaft journaled in said gear chamber and having one end thereof projecting externally of said housing; means effecting a driving connection between said transverse and operating shafts; a clutch mounted on the forward end of said operating shaft including an element connected with said operating shaft and another element adapted to be connected with a driving shaft of a power source; means normally urging said clutch elements into driving engagement; means for effecting disengagement of said clutch elements; a power takeoff shaft journaled in said pump chamber and having its rear end projecting rearwardly of said housing; means drivingly interconnecting said operating shaft with said power takeoff shaft; a lubricant pump in said pump chamber; and means on said power takeoff shaft arranged to actuate said pump.



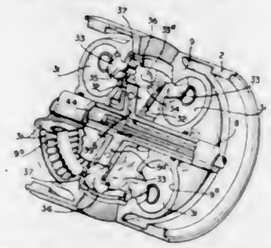
2,448,823

TRIBIPHENYLMETHANE DYESTUFF AND PIGMENT DYESTUFFS AND PROCESS FOR MAKING THE SAME

Alexander H. Popkin, Bronx, N. Y., assignor to Sun Chemical Corporation, a corporation of Delaware

No Drawing. Application March 11, 1944, Serial No. 526,131
9 Claims. (Cl. 260—387)

3. A coloring agent represented by the formula:



where Y represents an anion and p and r are small whole numbers.

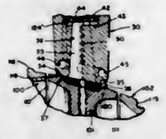
2,448,824

ROTARY TURBINE-TYPE HYDRAULIC COUPLING

Nathan C. Price, Hollywood, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.

Application November 24, 1944, Serial No. 564,993
12 Claims. (Cl. 60—54)

1. A hydraulic coupling consisting of a pair of spaced toroidal fluid filled containers having side openings facing each other, a drive shaft on which said containers are free to rotate, said containers being provided with fixed generally radial vanes internally, a circular spider in driven association with said shaft and extending between said containers, and variable angle vanes supported by and balanced relative to said spider and protruding into the openings in the fluid containers to form part of the fluid circulating path defined by the vanes therein.



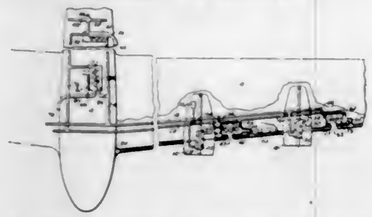
2,448,825

TURBINE ROTOR

Nathan C. Price and Harold A. Greenwald, Hollywood, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.

Application March 20, 1944, Serial No. 527,306
3 Claims. (Cl. 253—39)

3. A gas turbine rotor comprising a plurality of separately formed annular drum sections having radially-spaced hub and rim flanges connected by radially extending webs of reduced axial extent, said drum sections being arranged with their hubs in end-to-end axial alignment so that the internal surfaces of the hub flanges define a central bore which is large in diameter in relation to the radial wall thickness of the assembled drum sections and so that the circumferential marginal edges of adjacent rim flanges are spaced apart to provide narrow, annular expansion slots, said rim flanges forming a flow channel boundary, welds joining the hubs of adjacent drum sections and securing said sections so that said hub and rim flanges are related in the manner described, said rim flanges being formed with annular channels, pre-formed circumferentially extending V-shaped serrations formed in the bottom walls of said channels, and blades having their roots located in said channels and resistance butt welded to the walls thereof to fill said serrations.



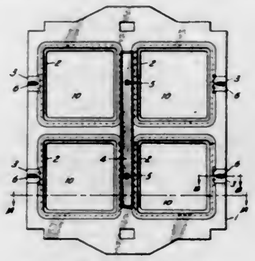
2,448,826

AIRCRAFT HEATING AND DEICING SYSTEM

Wilbur W. Reaser, Pacific Palisades, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Application January 30, 1945, Serial No. 575,218
3 Claims. (Cl. 244—134)

1. A heating system for an aircraft having an internal combustion engine and a wing comprising in combination: conduit means from a closed thermal circuit and including a heat exchanger subjected to the hot exhaust gases from said engine; a substantially non-condensible, non-combustible gas confined in said circuit; means for circulating said gas through said closed circuit to be warmed by said hot exhaust gases; a compartment formed within said wing; heat exchanging means located within said compartment, said compartment having an opening formed in the leading edge of said wing for admitting ram air into the same; and means for conducting the ram air after it has passed over said heat exchanging means along the leading edge of said wing to heat the same and thereby prevent the formation of ice thereon.



2,448,827

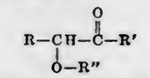
SECTIONAL MATCH PLATE

Emil Edward Reder, Jr., Chicago, Ill.

Application May 20, 1946, Serial No. 671,006
1 Claim. (Cl. 22—157)

A match plate comprising in combination a unitary rigid main frame having sides, ends and a centrally disposed member forming at least two openings in the frame, said sides, ends and centrally disposed members being recessed about the sides facing said openings, flanged pattern carrying blocks disposed in said openings in such fashion that the flanges on said blocks are received in the recesses in said openings, clamping strips removably secured to said main frame, a slot in each clamping strip whereby said strip may be moved over an outer flange of an adja-

cent pattern carrying block to engage said flange and clamp said block into said recessed opening and a centrally disposed removable runner bar adapted to be positioned on said central member and over an inner flange of each pattern block, whereby said inner flange may be clamped into said recessed opening, each clamping strip and runner bar cooperating to form a clamp securing a pattern block in the recessed opening provided therefor.



2,448,828

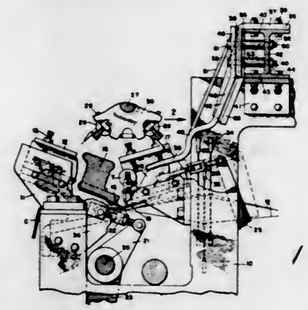
PHOTOPOLYMERIZATION

Malcolm M. Renfrew, Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 4, 1946, Serial No. 694,836
9 Claims. (Cl. 204—162)

1. Process of preparing polymers comprising irradiating, with light having a wave length of 1800–7000 angstroms, a photopolymerizable ethylenically unsaturated organic compound containing 0.01%–1.0%, by weight thereof, as a photopolymerizable catalyst therefor, of an acyloin ether of the formula

wherein R, R′ and R″ are monovalent hydrocarbon radicals.



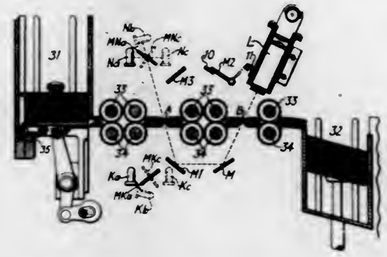
2,448,829

TUFT CUTTING MECHANISM FOR AXMINSTER LOOMS

Walter Y. Robb, Whitinsville, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application October 9, 1947, Serial No. 778,864
12 Claims. (Cl. 139—2)

1. In tuft yarn cutting mechanism for an Axminster loom, a front cutter bar extending across the loom and supporting a front cutter blade, a back cutter bar extending across the loom and supporting a back cutter blade under which the front blade moves during a tuft cutting operation, the front blade during said cutting operation exerting an upward force on the back blade tending to raise and vibrate the back cutter bar, and means engaging the back bar and exerting a downward force thereon during the cutting operation and resisting upward movement and vibration of said back bar and blade.

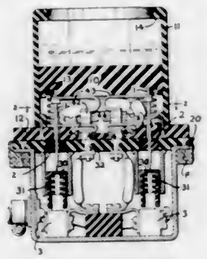


2,448,830

RECORD SENSING AND COMPARING MEANS

Joseph J. Robbins, New York, and Robert T. Blakely, Amityville, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York

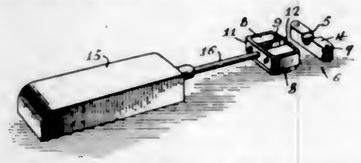
Application April 15, 1947, Serial No. 741,644
7 Claims. (Cl. 250—41.5)



1. In a machine having means to feed a plurality of records concurrently to spaced sensing stations, respectively, where the records are to be sensed and compared for agreeing and disagreeing relations of data designating light-pervious points in index positions of the records; a single sensing and comparing unit for the records at the spaced stations, said unit including an optical system of light projecting and reflecting elements to direct a single ray of light successively upon corresponding index positions of the records at the spaced stations to pass through any of the latter index positions which bears a light-pervious point or to be deflected by any blank one of these index points, so that the optical system in conjunction with the records at the spaced stations directs the ray of light into selective paths depending on agreeing or disagreeing relation of said corresponding index positions with respect to data designating light-pervious points, said unit further including a photo-sensitive element in one of said paths to be activated by the ray of light as a manifestation of one of asid relations, and a machine-controlling circuit selectively governed by the photo-sensitive element according to whether or not the photo-sensitive element has been activated.

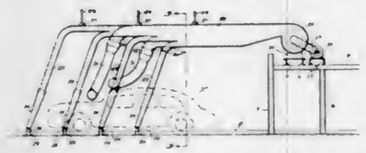
2,448,831
PRODUCTION OF ITACONIC ACID
Earl J. Roberts and Joseph A. Ambler, New Orleans, La., and Alfred Laurence Curl, Winter Haven, Fla., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 10, 1946, Serial No. 696,022
1 Claim. (Cl. 260—537)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process comprising treating an aqueous suspension of an alkali earth aconitate with sulfuric acid in an amount less than chemically equivalent to the actions present in the aconitate but sufficient to give a pH from 1 to 4, thereby to convert most of the aconitates to aconitic acid leaving present a small quantity of the aconitates, and heating to decompose the aconitic acid in the solution to itaconic acid and carbon dioxide in the presence of the aconitates.



2,448,832
PIN ANCHORED ELECTRIC OUTLET AND SWITCH
Donald S. Ross, Moclips, Wash.
Application September 14, 1943, Serial No. 502,281
16 Claims. (Cl. 200—51.09)

3. An electric outlet comprising a floor plate, exposed electric terminals carried by said floor plate, an outlet block, electric contacts carried by said outlet block for engagement with said terminals when the outlet block is placed on said floor plate, an insert of resilient, penetrable self-sealing material mounted in said floor plate, a holding pin carried by said outlet block operable to pierce said insert when the outlet block is in place on the outlet to restrain relative lateral movement thereof, a switch adapted to energize one of said electric terminals, and switch control means beneath said penetrable material insert and engageable by said pin piercing said insert to condition said switch for energization of the terminal controlled thereby.

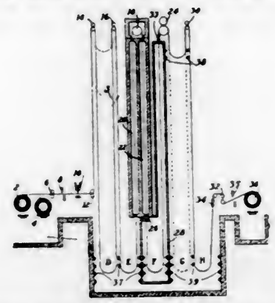


2,448,833
APPARATUS FOR MOUNTING A ROLLER IN A CAVITY IN A MEMBER
Marcel Royer, St. Eustache sur le Lac, Quebec, Canada
Application May 28, 1947, Serial No. 751,160
2 Claims. (Cl. 1—1)

1. An apparatus for mounting a roller in a cavity of a member, comprising a rest block adapted to fit in such cavity and having a seat adapted to support a roller, a guide block having a groove alined coaxially with said seat and adapted to support a pin, and a flat spring bound around said guide block and having its ends

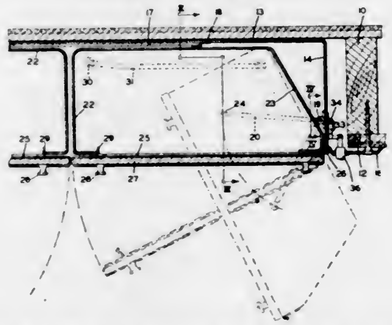
spaced apart at the end of said groove nearer said rest block.

2,448,834
MOTOR VEHICLE DRYING APPARATUS
Leo J. Rousseau, Grosse Pointe, Mich., assignor, by mesne assignments, to Minit-Man, Inc., Detroit, Mich., a corporation of Michigan
Application June 30, 1945, Serial No. 602,585
12 Claims. (Cl. 34—243)



11. In a motor vehicle cleaning apparatus with a vehicle pathway along which vehicles are adapted to be conveyed, a vehicle drying apparatus comprising a supporting structure mounted adjacent said pathway, a series of air conduits supported by said supporting structure and extending to the opposite sides of said pathway, elongated air discharge nozzles connected to said air conduits and arranged along the sides of said pathway to discharge air onto the sides of said vehicle, and air blower mechanism connected to said air conduits for supplying air to said air conduits and nozzles, said nozzles having elongated air outlet openings inclined downwardly, inwardly and rearwardly relatively to said pathway for directing blasts of air downwardly and rearwardly upon the sides of said vehicle in a direction opposite to the direction of vehicle travel along said pathway whereby to sweep the water off the sides of said vehicle in a downward and rearward direction.

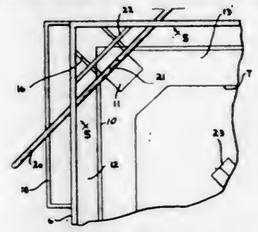
2,448,835
APPARATUS FOR CONTINUOUSLY PROCESSING STRIPS
Frederick K. Schefe, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application January 30, 1945, Serial No. 575,292
3 Claims. (Cl. 266—3)



3. Apparatus for continuously processing strip which comprises means for fastening coils of strip end to end, means for forming two freely hanging loops of strip, means for preheating said strip as it passes upwardly in the first loop, means for heating said strip as it passes downwardly in the second loop, means for cooling said strip as it passes upwardly in the second loop, means between the fastening means and the first loop for storing sufficient strip to enable the strip to continue moving through the heating means while fastening the coils together, a coiler at the end of the processing line, means for cutting said strip located in front of the coiler, and

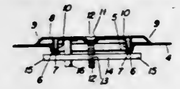
means between the second loop and cutting means for storing sufficient strip to enable the strip

to continue moving through the heating means while removing a coil from the coiler.



2,448,836
COMBINED MIRROR AND CABINET
Simon C. Schonfield, Youngstown, Ohio
Application May 11, 1945, Serial No. 593,284
9 Claims. (Cl. 312—112)

6. A combined mirror and cabinet structure comprising in combination an open-faced housing having a mirror attached to its rear wall, a shelf housing mounted in said first mentioned housing and having a front door with a mirror thereon, and means mounting said shelf housing in said first mentioned housing for sliding and angular movement in a horizontal plane whereby the face of the mirror on said door may move from a position in front of and generally parallel to said first mentioned mirror to a position extending angularly outward of said first mentioned mirror.



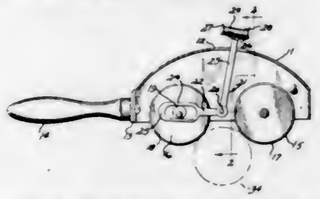
2,448,837
BASEBALL GAME
Carl Edwin Siberts, Jackson, Miss.
Application June 27, 1945, Serial No. 601,733
2 Claims. (Cl. 273—90)

2. Apparatus for playing baseball comprising a game board having a home plate corner, and upstanding side walls diverging from said corner, a home plate at said corner, an oscillating batting device comprising a rod extending across said plate diagonally of said corner and walls and with ends journalled in said walls for oscillation of the device in batting, said rod having a ball batting crank thereon oscillated thereby and being slidable in said walls endwise to variably position said crank relative to said plate in batting the ball, and a second rod extending between said

walls for engagement by said crank to limit oscillation thereof and prevent mis-operation of said device.

2,448,838
CLOSURE FOR CONTAINERS
Fred W. Sohnlein, San Diego, Calif., assignor of one-half to Granville M. Bowman, San Diego, Calif.
Application January 23, 1946, Serial No. 642,889
2 Claims. (Cl. 220—25)

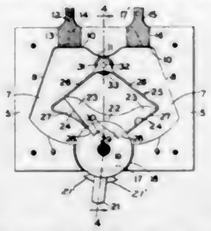
1. In a closure for receptacles, the combination of a circular outlet the edges of which are depressed inwardly to form a ledge having an annular rounded channel therein, a closure plate of larger size than the opening of said outlet and positioned to cover and extend beyond the same, said closure plate having a downwardly depending annular rounded rib closely engaging with said channel and said plate having an aperture through which extends a screw inside of said receptacle, and a bar in rotatable threaded engagement with said screw, a lug secured to said plate and positioned to contact said bar and limit the rotation thereof, the arms of which bar are located to engage with the bottom of said ledge upon the tightening of said screw, and thereby to effect the hermetic sealing of the outlet of said receptacle.



2,448,839
STRAP EXTENDER
Libera L. Steigerwald, Chicago, Ill.
Application February 22, 1945, Serial No. 579,284
1 Claim. (Cl. 2—230)

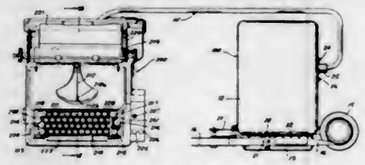
In combination with a garment having a strap member and a body member, said strap member being provided with a button and said body member being provided with a buttonhole, a device for extending the effective length of the strap comprising a flat strip of material which is relatively wide at its bottom and equipped with a button in one corner of the enlarged bottom portion, said

member tapering upwardly and inwardly toward the top thereof and being provided with an inclined slit in the corner of the upper end which is diagonally opposite to the button on the lower end of the strip, said button being adapted to be received within the buttonhole of the body member with the wide bottom portion thereof extending in contact with the body member and said inclined slit at the top of the strip of material receiving the button of said strap, said strip having a grip extension extending in substantial alignment with said slit and terminating in a free end slightly above the slit.



2,448,840
DENTAL AMALGAMATOR
Byron Stewart, Columbus, Ohio
Application February 21, 1947, Serial No. 730,135
3 Claims. (Cl. 259—75)

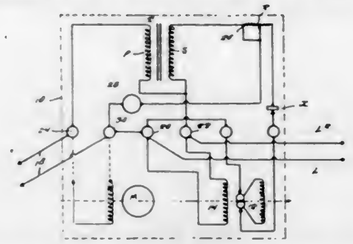
1. A dental amalgamator device of the class described which may be power-driven from a conventional dental lathe chuck comprising, a housing having an open bottom side and provided with a longitudinal slot in its upper wall, a handle extending from the rear end wall of said housing, a forward shaft having its opposite ends journaled in said side walls, a front roller on said shaft, a rear shaft having its opposite ends journaled in said side walls and disposed in parallelism with said forward shaft and in substantially the same horizontal plane therewith, said rear shaft being provided with an eccentric, a rear roller on said rear shaft, an intermediate shaft journaled in said side walls and disposed between said forward and rear shafts in parallelism therewith, a bent lever pivoted on said intermediate shaft including a substantially horizontal rearwardly-extending arm and a relatively vertical arm projecting upwardly through said slot in said housing, said horizontal arm being provided with means engaging said eccentric, a spring clip on the upper end of said projecting arm having gripping fingers, and a capsule frictionally gripped between said fingers, all adapted and arranged whereby the device may be manipulated so as to bring the front and rear rollers into engagement with the conventional lathe chuck so as to bring about rotation of the eccentric and rocking of the upwardly projecting arm and consequent reciprocating motion to the capsule.



2,448,841
ELECTRIC SWITCH
Ellen Graves Taylor, Miami, Fla.
Application May 2, 1946, Serial No. 666,711
3 Claims. (Cl. 200—154)

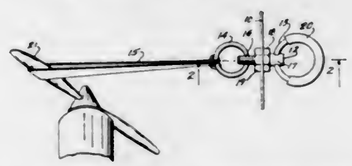
1. A switch comprising a support having a projection, contact units carried by the support and arranged upon opposite sides of the projection, a swinging carrier mounted upon the support and having shoulders extending generally radially beyond such carrier, a resilient frame having its ends mounted upon the carrier and having parts to engage the shoulders, each part being movable in one direction from the shoulder, and a contact element carried by the frame and mov-

able from one contact unit to the other contact unit and across the projection.



2,448,842
RECORD-CONTROLLED PRINTING APPARATUS
Henry L. Tholstrup, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application June 9, 1945, Serial No. 598,540
9 Claims. (Cl. 197—20)

5. In signal-controlled printing apparatus, the combination of cyclically operable mechanism for producing in succession signals representing, respectively, character data in accordance with a predetermined code system and said mechanism including a cycle control member movable the same amount during each cycle and at a predetermined time rate and means operable by said member during its said movement to produce a signal; printing means comprising a plurality of character type members selectively operable to effect printing on a copy sheet; means responsive to the producing of each character representing signal and operated by the movement of said cycle control member, during the cycle in which the signal is produced, for effecting a printing operation of the character type member corresponding to such signal; a device operable when rendered effective to provide for the successive cyclic operations of said cyclically operable mechanism; and means for controlling the operation of said device in accordance with the duration of said printing operations and effective upon the initiation of a printing operation during an operating cycle of said cyclically operable mechanism to render said device ineffective to provide for the next succeeding operating cycle, and effective upon the completion of said initiated printing operation to render said device effective to provide for said succeeding operating cycle.

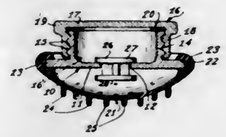


2,448,843
AUTOMATIC POWER FACTOR CONTROLLER
Henry E. Thomas, Vallejo, Calif.
Application July 27, 1945, Serial No. 607,363
6 Claims. (Cl. 323—104)

1. A power factor controller for an alternating current circuit, comprising a balanced bridge connected to said circuit, an alternator having its output connected across opposite terminals of said bridge to supply compensating current to said circuit when the bridge is unbalanced due to variations in load on the circuit causing changes in current and voltage and lowering power fac-

tor, and an exciter field for said alternator adapted to receive direct current from one side of said bridge, said alternator operating as a synchronous motor by taking its exciting current from said circuit when said bridge is restored to balance.

2,448,844
ENGINE STARTING DEVICE
Harry E. Throsel, Waukegan, Ill.
Application February 28, 1947, Serial No. 731,486
10 Claims. (Cl. 123—185)



1. An engine starting device comprising two ring members secured together; a guard member secured in operative position between said ring members; and a flexible member secured at one end to one of said ring members and having its other end arranged to engage a blade of a propeller driven by a miniature propeller driving engine.

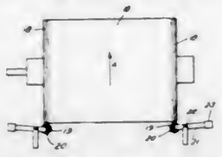
2,448,845
COLLAR CLASP
Theodore Thoreson, Wausau, Wis.
Application November 17, 1944, Serial No. 563,863
4 Claims. (Cl. 24—81)

4. A collar clasp comprising a channel-shaped connector provided with a pair of transversely disposed tongues, a pair of flat elongated members arranged in superposed relation and mounted for sliding movement relative to each other within said connector, one of the flat faces of each of said members being provided adjacent its outer end thereof with a resilient gripping means embodying a knob and a cooperating spring clip for receiving a wing of a collar therebetween, and a leaf spring provided with a transverse groove fixedly mounted on the flat face of the one of said pair of elongated members complemental to the back portion of said connector, said pair of tongues of the connector engaging the transverse groove of said leaf spring to thereby hold the elongated members in adjusted position.

2,448,846
LIQUID DISPENSING DEVICE
Marie L. Trochim, Portland, Oreg.
Application March 4, 1947, Serial No. 732,180
4 Claims. (Cl. 128—65)

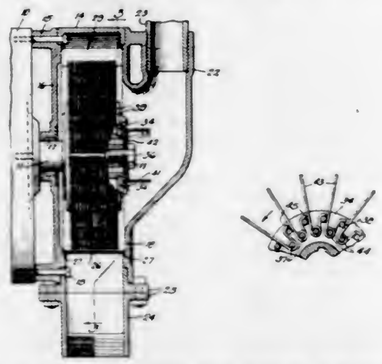
4. In a manually portable device for applying a liquid to the hair or skin of the user, a rigid receptacle having a bottom wall provided with an aperture therethrough; a flexible liquid applying member secured to said bottom wall and extending over said aperture; and a double acting valve in said aperture manually operable by the application of controlled pressure to said liquid applying device to control the flow of liquid through said aperture from said receptacle to the interior of said liquid applying device.

2,448,847
CONTROL CABLE FOR AIRCRAFT
Edward E. Van Dyke, Sherman Oaks, and Kingdon Kerr, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Application May 9, 1944, Serial No. 534,746
7 Claims. (Cl. 244—1)



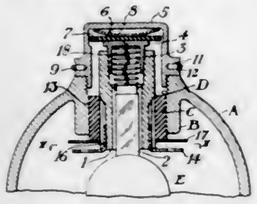
1. A high strength control cable for use in aircraft control systems comprising: a plurality of wires of high strength aluminum alloy laid together in helical wraps to constitute an aluminum alloy cable; a tubular sheath of material of lesser tensile strength than said aluminum alloy serving to maintain said wires in position and to protect the same; and a length of steel cable connected to at least one end of said aluminum alloy cable to enable said control cable to flex readily around a pulley or the like where used in an aircraft control system by the engagement of said length of steel cable with said pulley.

2,448,848
ELECTROPHORETIC SEPARATING APPARATUS
William F. Van Loenen, Los Altos, Calif., assignor, by mesne assignments, to Permanente Metals Corporation, a corporation of Delaware
Application July 18, 1944, Serial No. 545,500
1 Claim. (Cl. 204—300)



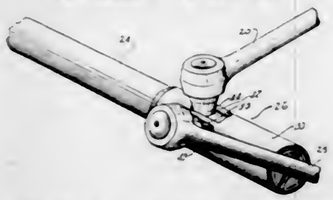
Apparatus for removing particles in suspension from liquids comprising a horizontally disposed

rotating cylindrical electrode having a smooth medial portion and at each of the outer edges of the cylindrical surface thereof a series of helical grooves cut in a direction toward the center of said rotating electrode, the grooves forming substantially an acute angle with a plane perpendicular to the axis of rotation of the said electrode, a fixed electrode adjacent to a substantial portion of the surface of said revolving electrode and having an electrostatic charge thereon different from said revolving electrode, fluid discharge means adjacent to the upper portion of said fixed electrode and adapted to spread a film of liquid containing said particles across the surface of said rotating electrode for subjecting said



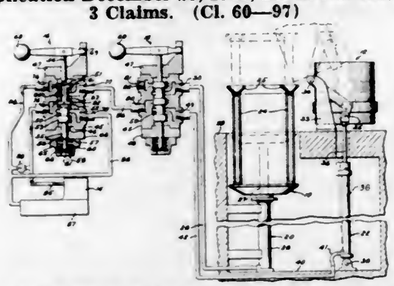
film to said electrostatic charge, said film tending to flow over the surface of said rotating electrode in a direction opposed to the normal movement of said surface, said series of helical grooves to feed toward the center of said revolving electrode for a predetermined direction of rotation thereof any liquid tending to overflow the edges of said revolving electrode, and means for cleaning the said outer edges of said revolving electrode, said cleaning means comprising rotatable brushes having radially disposed bristles, the brushes being so mounted that the bristles are pressed substantially perpendicularly into the said helical grooves whereby rotation of the electrode causes rotation of the brushes.

2,448,849
ROTOR CONSTRUCTION FOR COMMINUTING AND MIXING MACHINES
Harold H. Wagner, Cincinnati, Ohio, and Elmer G. Magnus, Chicago, Ill., assignors to The W. J. Fitzpatrick Company, Chicago, Ill., a corporation of Illinois
Application December 15, 1943, Serial No. 514,346
3 Claims. (Cl. 241—191)



3. In a comminuting and mixing machine, a substantially cylindrical casing and a rotor in the casing, the rotor comprising a central hub formed by a pair of axially spaced end plates connected by radially and circumferentially spaced bars, the inner bars registering radially with open spaces between adjacent outer bars and a series of elongated resilient strips with their central portions looped around radially inner ones of the bars and their ends extending outwardly between and in engagement respectively with adjacent radially outer bars, one end of each of the strips terminating adjacent and being hooked over one of the radially outer bars.

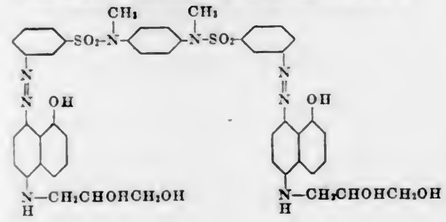
2,448,850
BRUSH HOLDER FOR ELECTRIC MOTORS
Victor Weber, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application April 7, 1945, Serial No. 587,092
7 Claims. (Cl. 171—324)



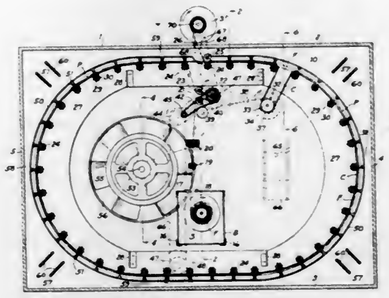
1. In an electric motor having a housing and a rotatable current conducting member therein, the combination of a brush holder for supporting a brush in operative engagement with the rotatable member and comprising a brush-containing sleeve adapted to be secured in the housing with one end projecting in spaced relation with the rotatable member, yieldable means within said sleeve and extending from the brush toward the opposite end of said sleeve, a retaining member press-fitted in said opposite sleeve end and being maintained therein by mutual tight engagement therewith for exerting pressure on said yieldable means and thereby biasing the brush toward the rotatable member, a cap adapted to be detachably secured to the housing for enclosing said retaining member and sleeve, and means carried by said cap and bearing on said retaining member to prevent loosening of the same.

2,448,851
STEERING LINKAGE
John J. Wharam, Dearborn, and Fred G. Loon, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application June 18, 1945, Serial No. 600,066
10 Claims. (Cl. 287—90)

10. In a joint, in combination, a housing having a hollow portion, a pair of connecting members angularly disposed with respect to each other and each having their inner ends pivotally connected to said housing, the axes of pivotal connection of said members to said housing being angularly disposed with respect to each other and intersecting in a common point within said housing.



2,448,852
CONTROL APPARATUS
Sven Aamot, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 29, 1945, Serial No. 638,393
3 Claims. (Cl. 60—97)

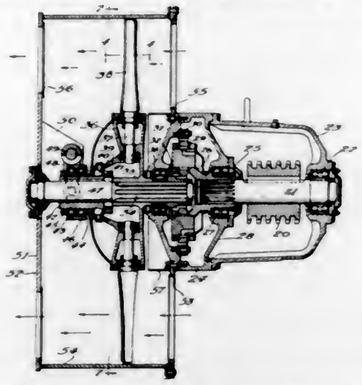


3. An apparatus for controlling the operation of a pair of fluid operated actuators comprising a hydraulic pump, a hydraulic fluid reservoir associated with said pump, a multi-position operating valve having a closed normal position and two open off-normal positions, a conduit for conducting hydraulic fluid from the pump to the operating valve, a conduit for conducting fluid from the operating valve to the reservoir, a multi-position selector valve having a closed normal position and two open off-normal positions, a single conduit for conducting fluid from one to the other of said valves, a pair of hydraulic actuators, a single conduit connecting one of said actuators to one of said open off-normal positions of said selector valve, a single conduit connecting the other of said actuators to the other open off-normal position of said selector valve, spring means for yieldingly retaining said selector valve in normal position, means for moving said selector valve to either one of said open off-normal positions to select either one of said actuators for actuation, spring means for yieldingly retaining said operating valve in said closed normal position, and means for moving said operating valve to either of said open off-normal positions, said operating valve in one of said open off-normal positions serving to direct the flow of fluid from the pump to the selector valve and in the other open off-normal position serving to by-pass the fluid from the pump back to the reservoir and to establish hydraulic communication from the selector valve to the reservoir.

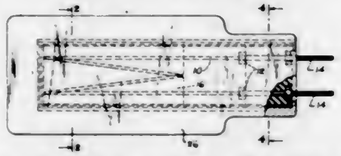
2,448,853
SULFONAMIDO DISAZO DYE
Charles F. H. Allen, Charles V. Wilson, and Gordon F. Frame, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 29, 1945, Serial No. 638,490
1 Claim. (Cl. 260—178)

The diazo compound having the formula:

2,448,854
CONTINUOUS FILM DRIER
Albert E. Beguin, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 20, 1946, Serial No. 717,515
In Great Britain October 28, 1946
3 Claims. (Cl. 34—155)



1. A film drier comprising a generally rectangular casing divided into parallel chambers, a film chamber and an air chamber, by intermediate wall between two outside walls, a plurality of rollers mounted in the film chamber positioned to conduct film through a path, means for turning the rollers, a nozzle plate dividing the film chamber into sections and extending between one outside wall and the intermediate wall, said plate having a generally oval shape and including nozzles extending transversely and ending adjacent the film path, an opening in the intermediate wall between the air chamber and the film chamber, and air openings around the edges of the intermediate wall, said openings being larger at the corners than between the corners tending to equalize air pressure at the nozzle, means for heating air in the casing before passing through the nozzles in the nozzle plate, a door through an outside wall of the drier to admit fresh air to be heated, a door on an outside wall for exhausting moisture-laden air after said air has passed into the film chamber, and an air circulating motor-driven fan positioned in an opening through the intermediate wall to move air from the film chamber to the air chamber whereby air may pass through the intermediate wall for distribution through the air chamber and through the nozzles to film moving through the path defined by the rollers.

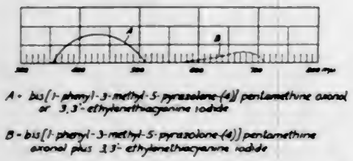


2,448,855
AERODYNAMIC BRAKE AND HOIST COMBINATION
James B. Black and Wilbur F. Shurts, Rockford, Ill., assignors to Twin Disc Clutch Company, Racine, Wis., a corporation of Wisconsin
Application May 16, 1944, Serial No. 535,838
2 Claims. (Cl. 254—187)

1. In a hoist system, the combination of a winding drum connected to a suspended load, power means for rotating the drum in a winding direction to raise the load, a clutch for connecting the means to the drum, and an air fan connected to the drum and having blades shiftable between positions exercising a substantial aerodynamic

resistance to the unwinding of the drum under the action of gravity when the clutch is disconnected and a negligible resistance during power winding of the drum.

2,448,856
ELECTRIC HEATING DEVICE
William A. Bohannon, Uniondale, N. Y.
Application October 2, 1945, Serial No. 619,791
2 Claims. (Cl. 201—63)



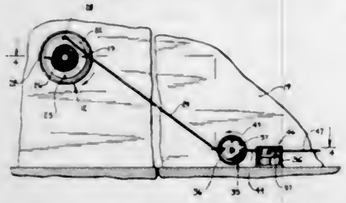
1. In an electric heater, a refractory core, a flexible resistor element laced over and around said core, sheets of insulating material disposed one each on opposite sides of said core, a metallic casing within the embrace of which the assembly comprising the core, resistor element and insulating material is enclosed, said casing comprising separable casing halves disposed one each on opposite sides of said assembly, and a metallic casting within which said casing is embedded, said casting having an exposed outer surface against which the article to be heated is adapted to bear, the metal of said casting having a melting temperature lower than that of the metal of said casing whereby, in cooling, after pouring, the metal of said casting is adapted to shrink, and by reason of said shrinkage, so compress the casing halves as to hold said assembly firmly in place therebetween.

2,448,857
STABILIZATION OF PHOTOGRAPHIC EMULSIONS
William L. Brice, Oak Ridge, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application October 25, 1945, Serial No. 624,570
9 Claims. (Cl. 95—88)

1. A rapid process for the formation of an image in a hardened silver halide photographic layer which comprises exposing said layer, developing it with a silver halide developing agent and stabilizing it in the presence of a metal below silver and above osmium in the electromotive series, with an alkali metal thiocyanate, only until the unexposed silver halide is substantially completely converted to a light-inert silver complex by reaction with the stabilizing material, and drying said stabilized image without any further treatment.

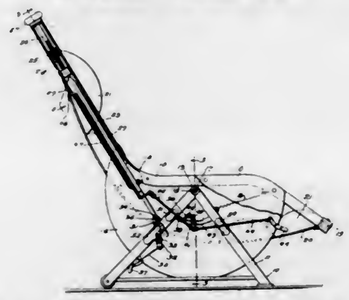
2,448,858
OPTICALLY SUPERSENSITIZED PHOTOGRAPHIC SILVER HALIDE EMULSION
Burt H. Carroll and Cyril J. Staud, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 23, 1945, Serial No. 630,544
19 Claims. (Cl. 95—7)

A - bis[1-phenyl-3-methyl-5-pyrazolone-(4)] pentamethine oxonol or 3,3'-ethylenethiacyanine iodide



B - bis[1-phenyl-3-methyl-5-pyrazolone-(4)] pentamethine oxonol plus 3,3'-ethylenethiacyanine iodide

1. A photographic silver halide emulsion sensitized with a supersensitizing combination of at least one oxonol dye selected from the group consisting of those represented by the following general formula:

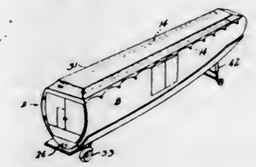


wherein L represents a methine group and Z and Z' each represents the non-metallic atoms necessary to complete a heterocyclic nucleus containing from 5 to 6 atoms in the heterocyclic ring, and the metal and ammonium salt forms of the formulated dyes, in a concentration of not more than 0.25 gram per mole of silver halide in the emulsion, and, as a supersensitizer for the oxonol dye, at least one basic dye selected from the group consisting of monomethine cyanine dyes, trimethine cyanine dyes, dimethine hemicyanine dyes and styryl dyes.

2,448,859
REMOTE CONTROL LIGHT CONTROL DEVICE
Ferdinand Chanoux, Elmhurst, Long Island, N. Y.
Application June 22, 1946, Serial No. 678,708
4 Claims. (Cl. 74—469)

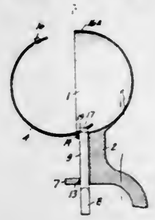
1. A mechanical operating mechanism for an electrical device comprising a disc device having a casing for positioning of sockets for an electrical device thereon adapted to be operated and removed therefrom, a rod connected to said device and adapted to be pulled to effect its operation, said device comprising a casing with openings through which rods can be extended, a disc pivoted within the casing for rotation through ninety degrees as the rod is pulled, and means for fastening the rods to the disc, said electrical device having a part adapted to be pulled, means for connecting the part with a disc of the device, and a spring connected to the disc of said device for returning said disc to its inoperative position when it has been released after having effected the operation of the electrical device.

2,448,860
ADJUSTABLE RECLINING CHAIR
Calhoun Collins, Bakersfield, Calif., assignor of one-half to Theodore M. Ryerson, Bakersfield, Calif.
Application November 25, 1944, Serial No. 565,106
12 Claims. (Cl. 155—116)



2. In a chair, a supporting frame; a chair frame including longitudinal side members and front and rear end bars, one of said end bars being fixedly mounted on said side members, the other of said end bars being movably mounted on said side members for movement toward and from said one of said end bars; pivots connecting said chair frame to said supporting frame for rearward tilting from a normal sitting position to a lying position; an occupant-supporting web anchored at its ends to said end bars and having slack between them; longitudinal vertically swingable thrust members connected with the ends of said movable end bar and extending therefrom to said supporting frame, said supporting frame having means for pivotally supporting the lower ends of said thrust members at points spaced from said chair frame pivots, the action of said supporting means being such that said thrust members will move said movable end bar a gradually increasing distance from said chair frame pivots as said chair frame is tilted rearwardly toward said lying position, whereby the slack in said web will be decreased as said chair frame is rearwardly tilted toward said lying position.

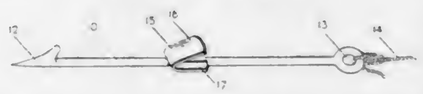
2,448,861
CELLULOSE ESTER LITHOGRAPHIC PRINTING PROCESS
Ralph S. Colt, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 23, 1945, Serial No. 612,247
8 Claims. (Cl. 95—5.4)



1. The method of forming a design in a cellulosic sheet for printing purposes, which comprises impregnating a hydrolyzed surface layer of a surface hydrolyzed cellulose organic acid ester sheet with ammonium bichromate, exposing said surface to light under a design and selectively removing a portion of the exposed hydrolyzed surface with a solution selected from the class consisting of water-soluble chlorites and water-soluble hypochlorites.

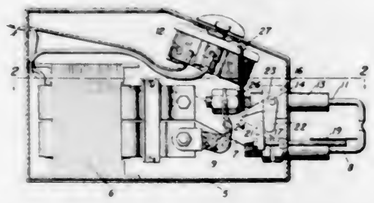
2,448,862
CARGO-CARRYING AIRPLANE
Ray B. Conklin, Buffalo, N. Y.
Application March 13, 1944, Serial No. 526,240
4 Claims. (Cl. 244—118)

1. A cargo-carrying airplane including a main airplane section having lateral wing sections and a cargo-carrying section slidably interengaged for longitudinal connection and disconnection to and from each other, said main airplane section including a fuselage section having a forward cockpit portion and a rear upper portion provided with a tail structure, the main airplane section carrying the motive power devices and controlling devices necessary to flight, and said cargo-carrying section comprising a rear lower fuselage section of a form to complete the fuselage structure of the airplane when applied to the main airplane section, the front end of said cargo-carrying section abutting the rear of the forward fuselage portion of said main airplane section, releasable means for locking the top of the cargo-carrying section to the rear upper fuselage portion of the main airplane section, said locking means including a longitudinally slidably operating rod mounted longitudinally of said rear upper fuselage portion and extending into said forward cockpit portion, and actuating means for said operating rod located in the forward cockpit portion of said main airplane section.



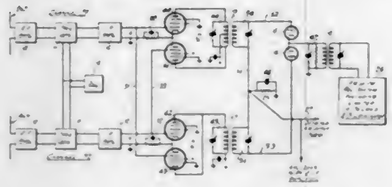
2,448,863
ICE-CREAM DIPPER
Mannie F. Costa, Syracuse, N. Y., assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y., a corporation of New York
Application May 11, 1946, Serial No. 669,085
1 Claim. (Cl. 107—48)

In an ice cream dipper and the like which includes a substantially semi-spherical bowl, a shank projecting radially from the rim of the bowl, a handle on the shank, an arcuate scraper



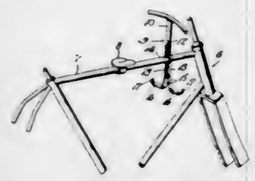
mounted in the bowl and means for actuating the scraper including a rock shaft journalled in bearings in the shank, one of which bearings opens into the bowl at the rim thereof, the scraper being mounted at one end on the shaft, the scraper being resilient and having a trunnion for entering a bearing in the bowl diametrically opposite the end of the shaft; the combination of said shaft being formed with a rib at its end projecting into the bowl, the rib having a notch in one end providing a shoulder located within the diameter of the shaft, and the end of the scraper adjacent the end of the shaft formed with a slot for receiving said rib appoximately as long as the distance from the bottom of the notch to the opposite end surface of the rib, whereby the slot receives the rib and interlocks in the notch upon tilting movement of the scraper about the end of the shaft when the trunnion is out of its bearing into position where the trunnion is alined with its bearing.

2,448,864
HARPOON CONSTRUCTION
Julian T. Crandall, Ashaway, R. I., assignor to Ashaway Line & Twine Mfg. Co., a corporation of Rhode Island
Application October 4, 1943, Serial No. 504,969
3 Claims. (Cl. 43—6)



1. A harpoon tip adapted to be mounted on the end of a support pole, comprising a rod having a hook at one end and a terminal eye at the other end, and a securing device having a base mounted on the rod intermediate the hook and eye and a retainer part cooperating with the base to form a trough for receiving the end of the support pole and holding the support pole adjacent to and in substantial alignment with the rod.

2,448,865
DENTAL WELDING MACHINE
Nicholas Crombach, San Francisco, Calif.
Application May 16, 1947, Serial No. 748,466
1 Claim. (CL 219—4)



In a device of the character described a casing, a welding transformer positioned in said casing, a pair of electrodes mounted in said casing, one of said electrodes being stationary, the other of said electrodes being pivoted, a pivoted arm mounted parallel to said stationary electrode, a plate secured to said arm, a pusher secured at the opposite end of said arm from said plate and engaging a bell crank lever, said bell crank lever being connected to said pivoted electrode, and spring means maintaining said bell crank lever in engagement with said pusher whereby downward movement on said plate will cause said pusher to move said bell crank lever and its attached electrode away from said stationary electrode.

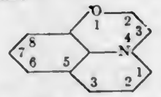
2,448,866
DIVERSITY RECEIVING SYSTEM
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 14, 1944, Serial No. 518,263
15 Claims. (Cl. 250—20)

7. A diversity receiving system having two receiving channels, individual radio frequency pick-ups coupled to skid channels, a first signal combining circuit arranged to effect an in-phase combination, a second signal combining circuit arranged to effect an out-of-phase combination, means for impressing the same signal from both channels on both combining circuits, said means including connections from each channel to different input terminals of both signal combining circuits, circuits coupling together the outputs of both signal combining circuits in such manner and being so constructed and arranged that the predominant useful signal from one combining circuit reduces the signal from the other combining circuit, and a utilization circuit coupled in common to the outputs of both signal combining circuits.

2,448,867
BICYCLE HANDLE BAR AND SEAT ATTACHMENT
Walter G. Darden, Houston, Tex.
Application August 9, 1946, Serial No. 689,487
5 Claims. (Cl. 155—5.13)

1. A bicycle attachment comprising a seat mounted on the cross frame bar of said bicycle, a handle bar and foot rest construction attached to the cross frame bar of a bicycle, said handle bar being horizontal and having a downwardly extending bar with a flattened end, the foot rest consisting of strap members attached to the flattened end of said bar and having oppositely bulged portions in engagement with the bicycle frame, and terminating at their lower ends in horizontal foot rests.

2,448,868
METHOD OF RECOVERING PHTHALIC ANHYDRIDE
Walter M. Davis, Jamaica Plain, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 18, 1944, Serial No. 568,785
4 Claims. (Cl. 260—342.5)

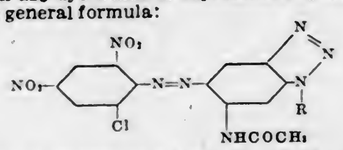


1. The method of continuously removing phthalic anhydride from vapors containing the same which comprises continuously cooling said vapors initially at a temperature varying between 130 and 450° C. down to a temperature between 50 and 95° C. by bringing said vapors into direct and intimate contact with a water spray, the amount of water being not in excess of that required to cool said vapors down to between 50 and 95° C. by the complete evaporation of said water by the time the condensed particles of phthalic anhydride separate from said vapors, whereby a major proportion of said phthalic anhydride is condensed and precipitated as anhydride from said vapors, and separating said precipitated phthalic anhydride from the remainder of said vapors.

2,448,869
TRIMETHYLENEBENZOMORPHOLINE AZO COMPOUNDS
Joseph B. Dickey, Rochester, N. Y., and James G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application November 15, 1945, Serial No. 628,964
7 Claims. (Cl. 260—152)

1. An azo compound having the general formula:

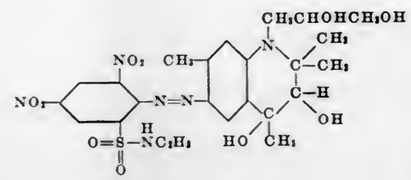
$$R—N=N—R_1$$



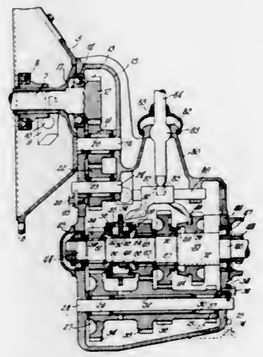
wherein R represents a member selected from the group consisting of an aryl group of the benzene series containing but one benzene nucleus and an aryl group of the naphthalene series containing but one naphthalene nucleus and R_1 represents a 4,5-trimethylenebenzomorpholine nucleus, having the basic structure

joined to the azo bond shown through the carbon atom in its 7-position.

2,448,870
AZO COMPOUNDS CONTAINING A TRIAZOLE NUCLEUS
Joseph B. Dickey, Rochester, N. Y., and James G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 15, 1945, Serial No. 635,406
2 Claims. (Cl. 260—157)



1. An azo dye which is represented by the following general formula:



wherein R represents a low carbon hydroxyalkyl group.

2,448,871
AZO COMPOUNDS CONTAINING A TETRAHYDROQUINOLINE NUCLEUS
Joseph B. Dickey, Rochester, N. Y., and James G. McNally, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 29, 1945, Serial No. 638,498
1 Claim. (Cl. 260—155)

The azo compound having the formula:

2,448,872
TRANSMISSION
Ernest E. Eaton, Berrien Springs, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application April 20, 1945, Serial No. 589,399
7 Claims. (Cl. 74—325)

1. In a transmission, and clutch assembly including a bell housing for said clutch, a driven shaft in said assembly projecting rearwardly out of said housing, a depending housing secured to said bell housing having a rearward extension below the bell housing including a vertical control tower, a bowl-shaped transmission housing secured to the underside of said depending housing and carrying a transmission main shaft disposed beneath said driven shaft in vertical alinement therewith, a countershaft disposed in said bowl-shaped housing above and laterally offset relative to said main shaft, gear trains between said shafts, and short stub shafts journalled in said depending housing and arranged in an inclined plane between said driven shaft and said countershaft and carrying intermediate gears for driving said countershaft from said driven shaft.

2,448,873

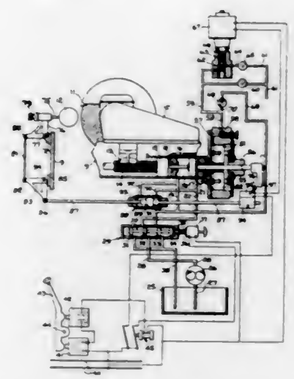
PHENOXYETHYL LACTATE AND A CELLULOSE COMPOUND PLASTICIZED THEREWITH

Martin L. Fein, Riverside, N. J., and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application April 17, 1945, Serial No. 588,882
9 Claims. (Cl. 106—179)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A plastic composition essentially consisting of a cellulose derivative taken from the group consisting of cellulose ethers and esters; and an ester of a polylactic acid of the formula:

$$CH_3CH(OH)COO—CH(CH_3)—COO—CH_2—CH_2—OR$$



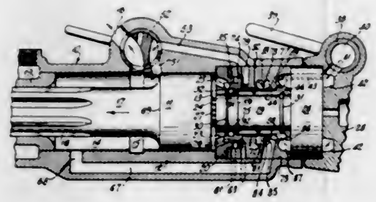
where R is a lower alkyl substituted phenyl radical; the said polylactic acid ester being present in an amount to plasticize the cellulose derivative.

2,448,874

HYDRAULICALLY OPERATED WHEEL FEEDING MECHANISM

Carl G. Flygare and Charles C. Alvord, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application November 2, 1946, Serial No. 707,400
5 Claims. (Cl. 51—2)



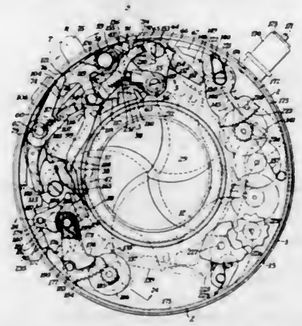
1. In a grinding machine having a rotatable grinding wheel, a transversely movable wheel slide therefor, and a feeding mechanism for said slide to feed the slide rapidly toward and from a work piece to be ground, means to slow down the rapid approaching feed to a shoulder grinding feed, means including a work engaging feeler engageable with the work piece to be ground control means movable with said feeler automatically to slow down the shoulder feed to a predetermined body feed when the grinding wheel engages the periphery of the work to be ground, and means to move said feeler to and from an operative position which is operated in timed relation with the wheel feeding mechanism so that the feeler is moved into an operative position in engagement with the work when the wheel is moved toward the work piece.

2,448,875

VALVE FOR ROCK DRILLS

Henry O. Fossum, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey

Application February 23, 1944, Serial No. 523,523
1 Claim. (Cl. 121—19)



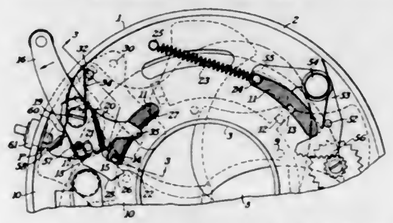
In a fluid pressure actuated rock drill comprising a cylinder having a piston reciprocable therein, a valve chest provided with a bored surface in its rear portion adapted for seating, an annular distributing valve mounted in said chest for axial reciprocation and having at its forward extremity a bored surface and adjacent its rear extremity a peripheral surface adapted to cooperate with said bored seating surface in the valve chest, a bushing coaxially disposed within the valve and spaced therefrom to provide an annular passageway therebetween and having a peripheral surface adapted to cooperate with the bored surface of the valve, means for delivering live air constantly to the rear end of the annular passageway, a rear cylinder port or ports connecting the front end of the annular passageway with the rear end of the cylinder and adapted to be uncovered by the valve in its rearward movement, a front cylinder passage connecting the rear end of the annular passageway with the front end of the cylinder and arranged to be uncovered upon forward movement of the valve, means for applying a pressure to the valve tending to hold the valve in each of its extreme positions, and means for tripping the valve automatically in response to the movements of the piston, said tripping means comprising an internal flange on the valve extending toward said bushing, the front face of the flange having a larger area than the rear face and being in constant communication with said annular passageway whereby the resultant static pressure on the flange tends to unseat the valve when in its forward position, the inner edge of the flange being closely spaced from the bushing whereby in the rear position of the valve the impinging of air against the rear face of the flange and the reduction of pressure on the front face of the flange combine to produce a resultant of force on the flange tending to unseat the valve, said valve chest being provided with an auxiliary exhaust port connecting to the atmosphere an exhaust groove adjacent the outlet passage to the front end of the cylinder, said valve being provided adjacent its rear peripheral seat with a portion of reduced diameter or neck adapted to connect said outlet passage to the exhaust groove upon reciprocation of the valve to its rearward position whereby to provide an auxiliary exhaust passage to diminish the compression of air by the piston near the end of the forward stroke.

2,448,876

HIGH-SPEED SYMMETRICAL OPENING PHOTOGRAPHIC SHUTTER

Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application May 21, 1945, Serial No. 595,033
49 Claims. (Cl. 95—63)



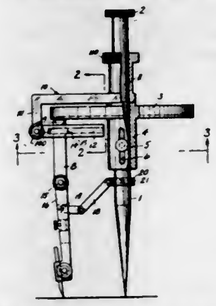
1. In a camera shutter of the type including an apertured casing, two interconnected blade rings movably mounted in the casing, shutter leaves operatively connected to the blade rings for movement to make an exposure through the shutter casing aperture, the combination with said blade rings, of a master member, means for producing exposures of different durations including a pivoted lever movably carrying the master member, a striking surface on the master member having an arcuate path of movement, means for setting and releasing the master member, an arm carried by a blade ring having different contact surfaces thereon and positioned to co-act with the master member striking surface, and means for moving the pivoted lever to select the contact surface of the arm to be struck by the striking surface of the master member, to operate the blade rings to make an exposure.

2,448,877

BULB EXPOSURE MECHANISM FOR CAMERA SHUTTERS

Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application May 23, 1947, Serial No. 750,009
6 Claims. (Cl. 95—60)



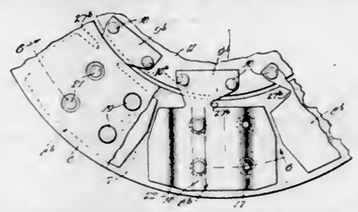
1. In a camera shutter of the type including an apertured casing, a plurality of shutter blades mounted in the casing, cover blind pivotally mounted in the casing, the combination with said shutter blades and cover blind, of mechanism for operating the shutter blades and cover blind in timed relation for normal exposures, said mechanism including a trigger, a setting device for setting the shutter for different exposures including "bulb" and means carried by the setting device for moving the cover blind from an operative to an inoperative position for making "bulb" exposures whereby actuation of the trigger may make a "bulb" exposure with the shutter leaves alone.

2,448,878

DRAFTSMAN'S COMPASS

Frederick Fuller, Middletown, N. Y.

Application November 17, 1944, Serial No. 563,824
2 Claims. (Cl. 33—27)



1. A draftsman's compass comprising a centering shaft pointed at its end, a form plate mounted on the shaft and having a guide of the contour of the figure to be drawn and being non-rotatable relatively to the shaft, a stylus-carrying leg having a follower movable along the guide during revolution of the leg around the axis of the shaft, a support for the leg rotatably mounted on the shaft to revolve the leg around the shaft, said supporting including a guide for permitting radial shifting of the leg as the follower moves along portions of the guide of the form plate nearer or farther from the axis of the shaft, said support including a hub rotatably mounted on the shaft, an arm extending radially from the hub and having an angular portion extending crosswise of the edge of the form plate and an inwardly extending arm extending under the form plate and formed with a slot, said leg having a follower movable in the slot, the inwardly extending arm being adjustable toward and from the form plate to permit the follower to be located in and removed from the guide of the form plate.

2,448,879

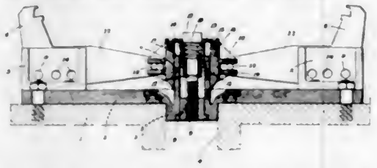
FRICTION CLUTCH PLATE

David E. Gamble, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

Application June 12, 1937, Serial No. 147,936
7 Claims. (Cl. 192—107)

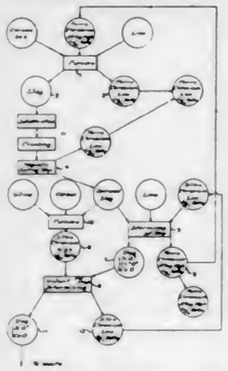
1. A friction clutch element comprising a mounting member of relatively heavy sheet metal, a plurality of spring metal cushions having a

substantially lesser weight per unit area than that of said mounting member, occupying an annular region lying beyond the outer radial limit of said mounting member, and each having an integral portion overlapping and securely attached to said mounting member, each of said portions being connected to its respective cushion by a neck region of substantially less width than that of either said attaching portion or the cushion, and friction facings carried by said cushions, in lateral register with said annular region.



2,448,880
FRICTION CLUTCH PLATE
David E. Gamble, Tucson, Ariz., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Original application June 12, 1937, Serial No. 147,936. Divided and this application April 21, 1948, Serial No. 22,342
7 Claims. (Cl. 192—107)

1. A friction clutch comprising a pair of axially spaced friction facings, and a plurality of spring metal cushions, each of said spring metal cushions including a central region and a wing portion extending circumferentially on each side of said central region, said wing portions being bowed in a generally circumferential direction, said cushions being arranged in registering pairs and disposed with their central regions in opposition and the concave sides of their wing portions facing in opposite directions, certain of said cushions being in engagement with and attached to only one of said friction facings and other cushions being in engagement with and attached to only the other of said friction facings, said certain cushions and said other cushions being yieldably engageable with each other to resist axial movement of the friction facings in relation to each other under clutch packing pressure.

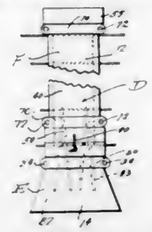


2,448,881
MULTIPLE JAW CHUCK
Edwin A. Glynn, Lodi, Calif., assignor to Super Mold Corporation of California, Lodi, Calif., a corporation of California
Application May 31, 1946, Serial No. 673,559
4 Claims. (Cl. 279—106)

1. A chuck comprising a base, a plurality of closely spaced jaws pivoted to the base about the outer periphery thereof, each jaw having an inwardly projecting arm, and means for exerting a down pressure on the inner ends of all the arms simultaneously; such means including an upstanding sleeve on the base, another sleeve slidable over the first named sleeve, means on said

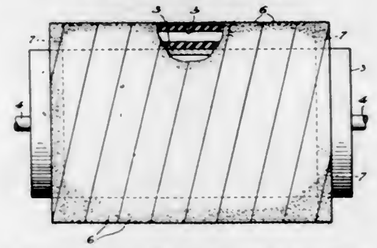
other sleeve pivotally connected with the ends of said arms, and means to advance and retract said other sleeve.

2,448,882
METHOD FOR DEIRONING CHROMIUM ORE
André Greffe, La Bathie, France, assignor to Societe D'Electro-Chimie, D'Electro-Metallurgie et des Acieries Electriques D'Ugine, Paris, France, a corporation of France
Application July 4, 1945, Serial No. 603,278
In France December 13, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 13, 1963
2 Claims. (Cl. 75—27)



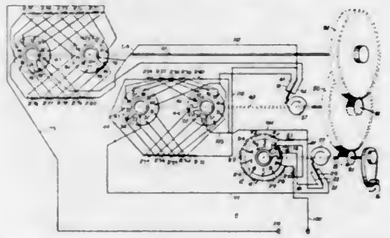
1. A process for the production of a chromium alloy containing less than 2% iron from natural iron and chromium ore, which comprises melting said ore and reducing it by metallic chromium in the presence of lime, thereby producing on the one hand an overlying layer of molten slag having a chromium oxide content higher than that in said ore and an iron content lower than that in said ore and on the other hand an underlying layer of molten ferro-chromium, separating the layer of molten ferro-chromium from the layer of molten slag, allowing the slag to freeze, thereafter crushing it and submitting it to a magnetic sorting operation to remove ferro-chromium dispersed in the slag, and submitting this deironed slag to a reduction operation.

2,448,883
CONCRETE POST FORM
Robert L. Hall, Thompsonville, Ill.
Application September 20, 1944, Serial No. 554,991
1 Claim. (Cl. 25—125)



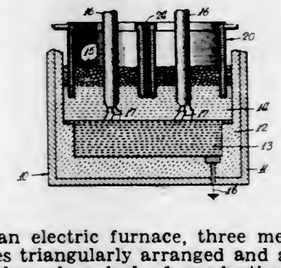
In a concrete post form construction the combination of a base unit comprising a pair of facing sections each providing frusto-pyramidal shaped compartment which open to each other, strap means surrounding said sections to connect them together, said base unit having an upper facing

socket therein of less depth than the compartment depth thereof, an upper post unit comprising a pair of sections having compartments facing each other, strap means surrounding said sections



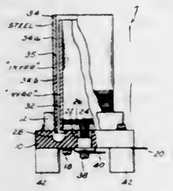
of the upper post unit and connecting them together, the said sections of the upper post unit having a lower reduced end firmly seated at its lower margin in and upon the bottom of the socket of the base unit.

2,448,884
ABRASIVE ROLL
Alfred E. Hamilton, Pittsburgh, Pa.
Application March 19, 1946, Serial No. 655,485
2 Claims. (Cl. 51—192)



1. An abrasive roll comprising a hub portion, a pneumatic drum normally closely fitting the peripheral surface of the hub, and an abrasive strip surrounding the drum and wound in a helical direction, the end portions of the strip at each end of the drum being folded backwardly between a preceding strip-turn and the periphery of the drum, whereby, upon inflation of the drum, such turned-back ends will be gripped against the periphery of the drum.

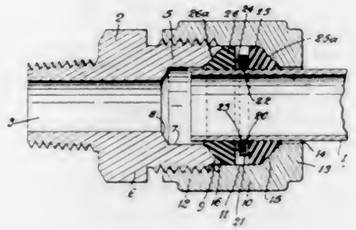
2,448,885
ELECTRIC SYSTEM TO CONTROL IMPEDANCES
Frederick J. Hooven, Dayton, Ohio
Application September 29, 1945, Serial No. 619,336
10 Claims. (Cl. 201—48)



1. A continuously variable system comprising a group of electrical circuits of a first order of values, at least one additional group of electrical circuits of the next higher order of values, a continuously adjustable control shaft, a first control member operable by said control shaft through a cycle of movement to progressively connect with all of the circuits of said first order of values, a second control member for connecting with said circuits of the higher order of values, means for operating said second control member in coordinated relation with said first control member, switch means actuated respectively by said control members for progressively connecting with said electrical circuits of both said first and said higher order of values in uniform increments not greater than those of said first order of values and means establishing a continuously closed circuit through said switch means including said electrical circuits of both said first order of values and of said higher order of values.

2,448,886
ELECTRIC FURNACE
Robert K. Hopkins, New York, N. Y., assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application May 19, 1945, Serial No. 594,704
2 Claims. (Cl. 13—9)

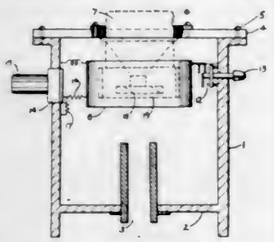
1. In an electric furnace, three metal fusing electrodes triangularly arranged and adapted to extend through a bed of conductive material, and three electrically neutral intermating closely adjoining tubular electric shields insulated from ground and other potentials and from each other, and peripherally enveloping the respective parts of said electrodes passing through the level of said bed, whereby current leakage between said electrode parts through said bed of conductive material is prevented, said shields conjointly defining an outer peripheral wall and walls extending radially inwardly therefrom.



2,448,887
CAPACITOR
Harry M. Huckleberry, Rodgers Forge, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 14, 1944, Serial No. 554,084
6 Claims. (Cl. 175—41)

1. A capacitor comprising, a first cylindrical electrode of conductive material, a second cylin-

drical electrode constructed for a portion of its length from a first conductive material having one thermal expansion coefficient and for the remainder of its length from a second conductive material having a different thermal expansion coefficient, one of said electrodes being surrounded by the other, said second electrode being greater in length than said first electrode, means for concentrically supporting said cylindrical electrodes and adjusting the ratio between the area of said second electrode of said first material and the area of said second electrode of said second material in register with said first electrode, and means for making electrical connection to each of said electrodes.

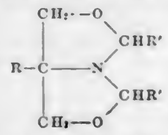


2,448,888
FITTING
Dibrell P. Hynes, Evanston, Ill., assignor to Chicago Forging and Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application April 5, 1946, Serial No. 659,825
5 Claims. (Cl. 285—90)

1. In a pressure joint, a tube, a pressure housing for receiving and surrounding said tube, said housing including a plurality of relatively movable chamber elements, one of said elements having an aperture through which the end of the tube extends, an anchorage on said tube including a deformable gripping ring and a circumferentially flanged member surrounding and confining the outer edge of said gripping ring, and means for providing a seal between said tube and said housing including bodies of flexible sealing material surrounding said tube and opposed to opposite sides of said anchorage, said relatively movable elements being adapted to subject said sealing bodies to sufficient compression to deform said gripping ring into tube gripping position.

2,448,889
PROXIMITY FUSE TESTING APPARATUS
Nels Johnson, Lower Merion Township, Montgomery County, and William E. Bradley, Swarthmore, Pa., assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 16, 1944, Serial No. 554,384
11 Claims. (Cl. 73—1)

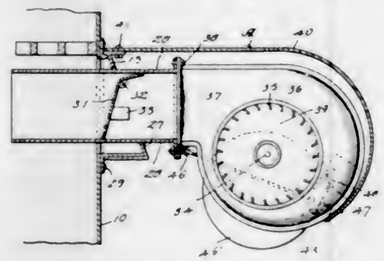
1. A testing unit for testing a radio proximity fuse unit and its antenna comprising a metallic housing for electrically shielding the fuse unit, a ring shaped coupling element surrounding the antenna of said fuse unit tightly coupled to said antenna at the operating frequency of said fuse, means for inserting an impedance between said coupling element and said housing to simulate the radiation resistance of said antenna, and



means for balancing out the capacitance between said coupling ring and said housing.

2,448,890
CONDENSATION PRODUCTS OF POLYHYDROXY ALKYLAMINES WITH ALDEHYDES
William B. Johnston, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 4, 1941, Serial No. 413,652
8 Claims. (Cl. 260—307)

1. The condensation product of an aldehyde with a polyhydroxy alkylamine of the general formula



$$\begin{array}{l} CH_2OH \\ | \\ R-C-NH_2 \\ | \\ CH_2OH \end{array}$$

where R is a member of the group consisting of H, alkyl and alkylol radicals said condensation product having the general formula:

in which R is as defined above and R' is the residue of the aldehyde employed in the reaction.

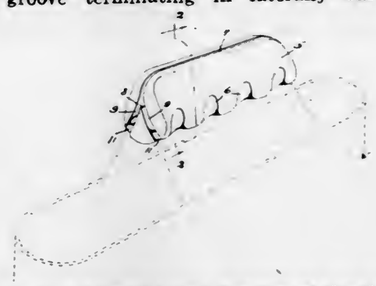
2,448,891
FORCED-DRAFT AIR SUPPLY AND CONTROL MEANS FOR FURNACES
Harry P. Katz, Cleveland, Ohio
Application November 20, 1943, Serial No. 511,126
4 Claims. (Cl. 110—72)

1. In combination with the ash-pit door of a furnace, a forced draft unit mounted thereon in

communication with the atmosphere and the interior of the furnace, the unit comprising a duct having one end communicating with the furnace, a blower means associated therewith having an intake communicating with the atmosphere, and shutter means for the duct, biased so as to automatically close in the absence of draft, said shutter means being displaceable to open position in the presence of a draft from the blower means, the blower means having a discharge pipe leading to the duct, and a shield extending from the duct rearwardly and downwardly over the blower means, devices positioning said shield attached adjacent the lower end thereof and to the duct, and a closure mounted on said shield for the intake and adjustable relatively thereto.

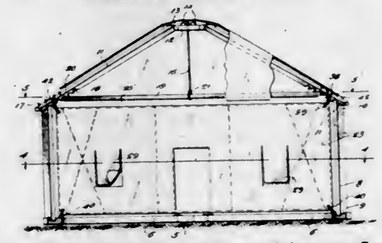
2,448,892
OXIDATION OF CELLULOSE
William O. Kenyon and Edward C. Yackel, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application January 1, 1945, Serial No. 571,012
3 Claims. (Cl. 8—116)

2. A process of preparing oxidized cellulose in woven form which comprises immersing air-dry woven cellulose in a solution of nitrogen dioxide in carbon tetrachloride for 1–16 hours whereby a substantial carboxyl content is imparted to the cellulose.



2,448,893
CAP FOR FLASKS OR THE LIKE
Charles Lamar, Brooklyn, N. Y.
Application May 12, 1947, Serial No. 747,526
8 Claims. (Cl. 215—43)

1. A combination funnel and cup comprising a body portion, a lid, and a double hinge, the body portion having side walls, a bottom, an open ended nozzle extending downwardly from the bottom, the lid having a centrally disposed stopper projecting therefrom and a pin extending through the stopper and lid securing them together, the pin having an enlarged head resting on and covering the end of the stopper removed from the lid, the stopper and pin head being capable of fitting slidably in the nozzle, the double hinge having a connecting member rotatably joined at one end to the body portion and at the other end to the lid, the lid being adapted to be rotated into position with its stopper and pin head in the nozzle, closing its open end.



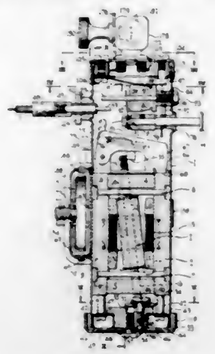
2,448,894
SHOPPING BAG HANDLE
Anthony J. Laus, Pittsburgh, Pa.
Application July 2, 1947, Serial No. 758,589
4 Claims. (Cl. 16—114)

1. A removable handle for cord shopping bag handles, comprising a body portion having a groove formed longitudinally thereof, the groove being extended inwardly from the edge thereof, said groove terminating in laterally curved

branches in which the cord handles of the shopping bag are held.

2,448,895
COLLAPSIBLE HOUSE
John T. Lawrence, Inman, S. C.
Application April 25, 1945, Serial No. 590,132
7 Claims. (Cl. 135—1)

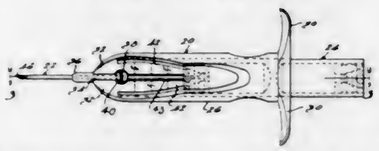
2. A collapsible house comprising a flexible wall assembly, an elevated supporting frame and means supporting the wall assembly by the elevated frame, said supporting frame consisting of a hub and a plurality of hinged rafters, a base structure, prop means between the base structure and the rafters and tie means between the flexible wall assembly and the rafters, and a spreader interposed between the rafters, said rafters being provided with notches for receiving the ends of the spreader, said hub structure of the supporting frame provided with a depending element secured to the intermediate portion of the spreader.



2,448,896
SYNTHETIC VANILLA FLAVOR
Charles Levy, Paterson, N. J.
No Drawing. Application June 13, 1945, Serial No. 599,311
1 Claim. (Cl. 99—140)

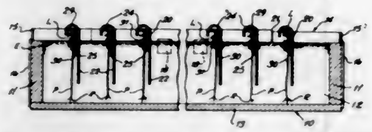
A flavoring compound, comprising a quantity of vanillin, a quantity of caramel substantially equal to that of said vanillin, a quantity of coumarin equal to substantially one-fourth the quantity of said vanillin, a quantity of alcohol equal to substantially four times the quantity of said vanillin, and water in a quantity sufficient to raise the volume to one gallon, said vanillin in said compound comprising one-half ounce.

2,448,897
SURGE GENERATOR
Stanley D. Livingston, Freeport, N. Y.
Application December 31, 1946, Serial No. 719,389
6 Claims. (Cl. 171—209)



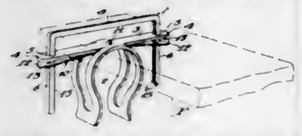
5. An electric generator, including, in combination: a permanent magnet field; pole shoes; an

elongated armature adapted to cooperate with the pole shoes; a leaf spring; means whereby the leaf spring causes movement of the armature and creates a difference of potential; a shifting bar,



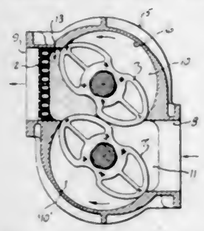
said shifting bar adapted to receive the one end of the leaf spring; means for oscillating the shifting bar whereby the spring is flexed, said means including a rotatable knob adapted for manual operation.

2,448,898
HYPODERMIC NEEDLE
Marshall L. Lockhart, Rutherford, N. J.
Application April 21, 1945, Serial No. 589,563
1 Claim. (Cl. 128—215)



In combination a hypodermic syringe including a holder comprising a pair of substantially parallel and spaced jaws connected to each other to yieldingly resist separation, adjacent inner faces of said jaws being transversely curved to present longitudinally extending channels and each of said faces being interrupted by a notch which, in the different jaws, are aligned to provide a common opening, a needle including a straight cannula and a manipulating and mounting portion therefor disposed intermediate the ends of said cannula, said cannula having a piercing point at least at one of its ends, said portion including a cylindrical shank of constant diameter and which shank is of greater diameter than the distance between the inner faces of said jaws whereby it may be received and retained between the same with the curved inner jaw faces yieldingly engaging the outer shank face, a head adjacent one end of said shank and disposed within said notch, the diameter of said head being such that it extends beyond the plane of said jaws to provide a portion by means of which said cannula may be rotated to cause the piercing point thereof to extend in a desired direction with reference to said holder, the curved surface of said shank providing a rotatable bearing with the holder jaws and also providing a surface acting as a cam to spread said jaws as said cannula is rocked through an arc with respect to said holder, whereby with such spreading the needle may be removed from between said jaws.

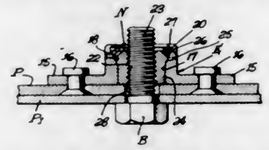
2,448,899
SEEDLING PLANTING DEVICE
Henry A. Macro, Sheridan, N. Y.
Application October 2, 1946, Serial No. 700,614
5 Claims. (Cl. 111—2)



1. A seedling planting device, comprising a strip having means for mounting the ends thereof adjacent the earth surface, and means for anchoring plants thereto, said strip having an overhanging cover portion to protect the plants, and an elastic strip mounted against said first named strip to secure the plants therebeneath in spaced relation beneath said overhanging cover portion.

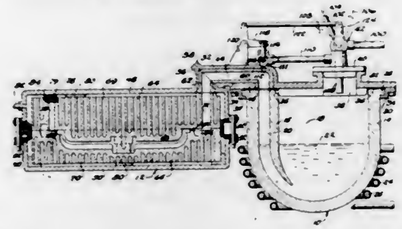
2,448,900
TICKET HOLDER
Belmont P. Mayo, Providence, R. I.
Application March 23, 1946, Serial No. 656,758
4 Claims. (Cl. 211—49)

2. In a device of the type specified, a rest for receiving the end of a pad of tickets, a clamping element having a crossbar with legs depending therefrom through openings in the ends of the rest, said legs formed with teeth, and resilient means for engaging the teeth on the legs of the clamping element to lock it in adjusted position in relation to the rest.



2,448,901
INTERENGAGING IMPELLER ROTARY POSITIVE DISPLACEMENT BLOWER
Robert P. McCulloch, Fox Point, and John L. Ryde, Milwaukee, Wis., assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application August 12, 1943, Serial No. 498,274
1 Claim. (Cl. 230—141)

A positive displacement type blower comprising a housing having cylindrical communicating bores; intake and discharge passages radial to said bores and communicating therewith at opposite sides of said housing, said passages having their axes offset with respect to each other; and a pair of cooperating rotors rotatable in said bores each arranged proximate the inward end of a passage and having intermeshing lobes which

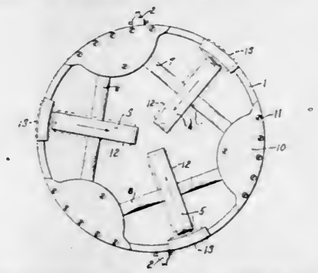


define bucket spaces with the walls of said bores, each rotor having its axis aligned with and intersecting the axis of its proximate passage, said rotor axes being parallel to each other in a common plane, and the axes of the passages being offset on opposite sides of a median plane between the rotor axes and approximately perpendicular to the aforesaid common plane of the rotor axes, whereby each passage opens substantially entirely into a respective bore.

2,448,902
NUT LOCK CONSTRUCTION
Wendell R. McKenzie, Claremont, Calif., assignor to Bank of America National Trust and Savings Association, Los Angeles, Calif., a National Banking Association
Application April 3, 1944, Serial No. 529,307
5 Claims. (Cl. 151—19)

1. In a nut lock construction, the combination of: an outer nut holding shell member having an inner end adapted to be seated against the surface of a part to be clamped, said shell having a bore extending therethrough including a cylindrical portion at the inner end and an enlarged frusto-conical seat portion at the outer end with its largest diameter nearest said outer end; an inner nut member disposed in said shell member, said nut member being split throughout its length along one side thereof and also having a cylindrical neck portion normally of slightly larger diameter than the shell bore, said nut having a frusto-conical head to seat on the frusto-conical portion of the bore of said shell; screw threads formed in the bore of said inner nut member adapted to be engaged by the threads of the bolt which it is to receive; and means holding one of said members against turning relative to the other.

2,448,903
DISPLACEMENT TYPE CASTING APPARATUS
Raymond J. Miller, Detroit, Mich.
Application December 15, 1944, Serial No. 568,253
2 Claims. (Cl. 22—69)



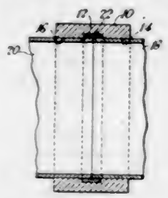
2. In a displacement type casting device having a crucible including a fluid tight closure, a mold associated with the crucible and including a casting cavity, feeder forming means interconnecting the space within the crucible with the casting cavity, fluid supply means to subject the space within the crucible to the pressure of an inert non-oxidizing gas, valve means controlling said fluid supply means and movable from charging to casting positions to subject the space within the crucible to increased pressure, vent forming means communicating with the casting cavity at a point remote from the connection therewith of the feeder forming means, auxiliary fluid supply means communicating with the feeder forming means to flush the casting cavity with inert non-oxidizing gas to displace oxygen laden air therefrom, valve means controlling the auxiliary fluid supply means and movable between closed and open positions, the combination therewith of motion transmitting means actuated by the first mentioned valve means to maintain the second mentioned valve means in the open position when the first mentioned valve means is in the charging position and to close the second mentioned valve means when the first mentioned valve means is in the casting position.

2,448,904
DEVICE FOR PRACTICING GOLF
Samuel Alexander Millner, Jacksonville, Fla.
Application March 31, 1945, Serial No. 585,839
3 Claims. (Cl. 273—35)

1. An apparatus for guiding a golf club head in practice swings, comprising a support, a universal joint fixed thereto at shoulder height of a player, a guide member composed of a rod having a portion of major length suspended from said joint and a minor portion pivotally suspended from said major portion and extending to a level adjacent that at which the club head is to engage a golf ball, a universal joint carried on the lower end of said minor portion of the arm having a part adapted for attachment to a golf club head.

2,448,905
SELF-COMPENSATING GYRO ASSEMBLY
Brian B. K. Morse, Holyoke, Mass.
Application April 9, 1947, Serial No. 740,433
4 Claims. (Cl. 74—5)

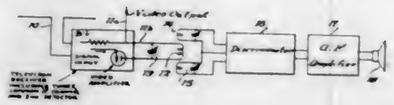
1. A self-compensating gyro assembly which comprises an odd plurality of gyro-rotors mounted on shafts rotatably supported in and by a



gimbal ring, the axes of said shafts forming an equilateral triangle, and means to simultaneously drive all of said rotors at the same speed and in the same direction.

2,448,906
ARTIFICIAL FLAME
Philip Munao and Carmelo C. Munao, Brooklyn, N. Y.
Application May 15, 1946, Serial No. 670,005
1 Claim. (Cl. 272—8)

As a new article of manufacture, an artificial flame and log assembly comprising a log structure, a flame-shaped covering of light transmitting plastic material thereon and a hidden light source, said flame-shaped covering having a surface facing said hidden light source and receiving radiation therefrom for transmittal into the body of said covering, said face being sub-divided into several separate sections confronting the light source at distinct places, said plastic covering having embedded therein rods of plastic material, each having a refractive index different from the refractive index of the main body of said plastic material and each being constructed of material having the light transmitting properties of polymethyl methacrylate.



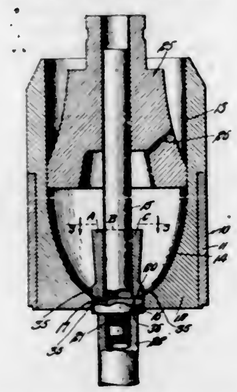
2,448,907
PIPE JOINT
William R. Ost, Verona, N. J., assignor to Walworth Patents Inc., Boston, Mass., a corporation of Massachusetts
Application January 25, 1944, Serial No. 519,618
2 Claims. (Cl. 285—115)

1. A joint for tubular members comprising a sleeve member within which adjacent ends of the tubular members are entered in abutting relation, said sleeve member having an internal recess which spans said abutting end faces, and a brazing alloy amalgamating said sleeve to the tubular members and connecting said abutting end faces to form a continuous conduit substantially uninterrupted on the interior surface, said alloy being initially contained in said recess.

2,448,908
TELEVISION RECEIVER
Louis W. Parker, Woodside, N. Y.
Application July 13, 1944, Serial No. 544,726
26 Claims. (Cl. 178—5.8)

7. The method of receiving a television signal frequency band including related video and sound signals on separated carriers, the video carrier being amplitude modulated and the sound carrier being frequency modulated with the carriers separated by a substantially constant frequency difference, which comprises the steps of amplifying the two carriers in a common channel to different average amplitudes such that when the video carrier is to be modulated m percent, the sound carrier may have a maximum amplitude not in excess of $(100-m)$ percent of the average amplitude of the video carrier, heterodyning the video

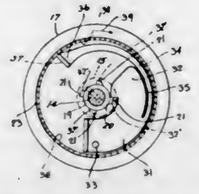
and the sound carriers with each other to produce a beat note having a frequency equal to the difference between the original separation of the video and the sound signal carriers, simultaneously detecting the amplitude modulated video carrier to derive a video component, and amplifying the video component together with said beat note, and then separating out the beat note to derive the sound signal therefrom, and passing the video component to a video signal reproduction system and the sound signal to an audio signal reproducer.



2,448,909
METHOD OF REMOVING INSULATION FROM METALLIC ELECTRIC CONDUCTORS
Yaro Piskac and Raymond E. Smiley, Maple Heights, Ohio, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
No Drawing. Application April 27, 1945, Serial No. 590,746
2 Claims. (Cl. 134—38)

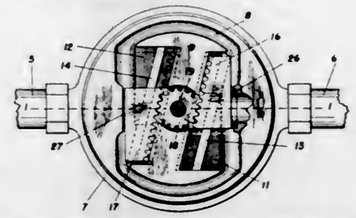
1. The method of removing insulation of vinyl acetate resin material from metallic electric conductors which comprises forming an aqueous solution of from ten to fourteen grams per 25 cubic centimeters of chromium trioxide, heating said solution to a temperature within a range of from 190° to 226° Fahrenheit and immersing a portion of said conductor with its insulation in said solution for a period of time approximating thirty seconds to remove said insulation without damage to said conductor or its metallic surface.

2,448,910
CHLORINATED PARAFFIN WAX AMINES FOR CONTROLLING FUNGI AND BACTERIA
Thomas E. Reamer, Albany, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 27, 1944, Serial No. 528,348
7 Claims. (Cl. 167—38.6)



1. A method of controlling fungi and bacteria comprising exposing them to mixtures of aliphatic compounds having at least 12 carbon atoms and not more than about 40 carbon atoms and containing per average molecule more than one amino group, at least one olefinic double bond, combined chlorine only in the form of 0.5 to 1.5 non-ionizable chlorine atoms, and an oleophilic hydrocarbon chain of at least 8 carbon atoms linked in an amino group.

2,448,911
STOPPER PRESS DIE
John O. Reid, Jersey City, N. J., assignor to Joseph Dixon Crucible Company, Jersey City, N. J., a corporation of New Jersey
Application September 1, 1945, Serial No. 614,049
10 Claims. (Cl. 25—44)



1. A stopper press die comprising a mold, a plunger movable thereinto to compress the material in the mold, a pin movable upwardly through the bottom of the mold, and means on the pin and surrounding the lower portion of the pin for forming an annular undercut recess in the bottom of the stopper formed in the mold.

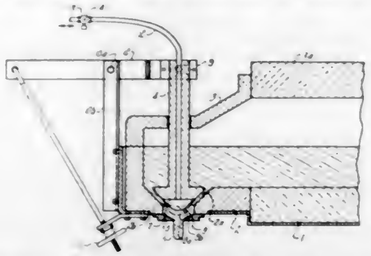
2,448,912
OVERRUNNING CLUTCH
Thomas I. Ress and John W. Lang, Jr., Chicago, Ill., assignors to De Vry Corporation, Chicago, Ill., a corporation of Illinois
Application January 12, 1945, Serial No. 572,479
4 Claims. (Cl. 192—41)

1. In combination, a stationary bearing, a shaft having an end portion rotatably journalled in said bearing, a pulley mounted on said shaft for free rotation with respect thereto, a latch member pivotally carried by the pulley for rotation therewith and having a drag arm, a member fixed to the bearing and having a portion thereof adapted to have dragging engagement with respect to said drag arm when said pulley is rotated in one direction, and means on said shaft and rotatable therewith and adapted for latched engagement with said latch member when said latch member is pivoted in a direction opposite to the rotation of the pulley in said one direction to provide together with said latch member a connection between the shaft and said pulley, said means being adapted to pivot said latch member in an opposite direction to the aforesaid pivotal movement of said latch member by the inertia of said shaft when said pulley becomes inert, to disengage the latched connection between said means and said latch member to permit free rotation of the pulley relative to the shaft.

2,448,913
VALVE
John Roberts, San Francisco, Calif.
Application December 28, 1945, Serial No. 637,551
1 Claim. (Cl. 251—54)

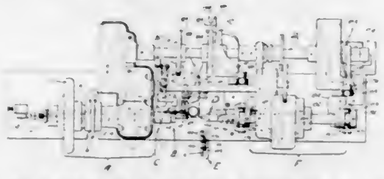
In a valve of the character described, a casing, opposed inlet and outlet valve seats formed in said casing, a pair of wedge-shaped valves slidably mounted in said casing, inclined guides formed in said casing and inclined with respect to said valve seats whereby when said valves are moved on said guides said valves will be moved toward or away from said seats, and means for moving said valves simultaneously, said means comprising a rotatable member positioned between said valves and in the same plane as the axis of said valve seats and having driving engagement with said valves to transmit simultaneous movement to each of said valves.

2,448,914
CIGARETTE EJECTING DEVICE
Fred Roth, Brooklyn, N. Y.
Application June 21, 1946, Serial No. 678,514
13 Claims. (Cl. 312—75)



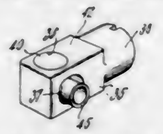
1. A cigarette dispensing container comprising a receptacle, a forwardly inclined panel hinged to a wall of the receptacle for vertical swinging movement and upon which cigarettes are supported for forward gravitational feed, detent means for preventing feeding movement of the cigarettes, means for yieldably resisting downward swinging movement of said panel, and cam means associated with said panel for feeding a cigarette over said detent means when the panel moves downwardly.

2,448,915
APPARATUS FOR FEEDING GLASS
Arthur W. Schmid, Brookside Farm, Pa.
Application January 15, 1944, Serial No. 518,335
2 Claims. (Cl. 49—55)



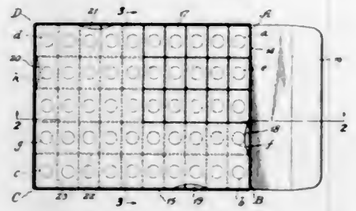
1. Apparatus for feeding suspended mold charges comprising a forehearth, a feeder boot therefor having a funnel-shaped aperture terminating in a cylindrical wall of an impulse chamber and having an orifice ring at the bottom thereof, a hollow adjustable valve complementary in shape to the wall of the funnel-shaped aperture having a blunt end of substantially the di-

ameter of the cylindrical wall of the funnel-shaped aperture and forming a wall of said impulse chamber, means communicating with the hollow interior of said valve for transmitting positive and negative air pressures to said impulse



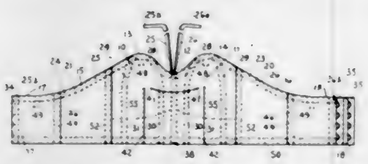
chamber above the orifice ring in such proportion as to maintain an air bubble above the glass in the impulse chamber, and means for adjusting the valve to regulate the flow of glass to said chamber.

2,448,916
HEATER FOLDING MACHINE
Gerhard Gunther Schneider and Frank L. Donohue, Maplewood, N. J., assignors to National Union Radio Corporation, Newark, N. J., a corporation of Delaware
Application November 7, 1944, Serial No. 562,356
14 Claims. (Cl. 140—71.5)



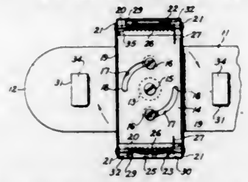
1. In a machine of the kind described, the combination comprising means for folding wire upon itself to form a folded filament, said means including a rotatable arbor around which the wire is wound, means to rotate said arbor and to simultaneously feed said wire longitudinally of the axis of rotation of said arbor to form it into a flattened helix means for partially collapsing said arbor for releasing the folded filament from said folding means, means for receiving and transferring the folded filament in the folded condition from said folding means to a receptacle, and means for automatically operating said folding means and said transferring means in timed relation.

2,448,917
UNIVERSAL COUPLING FOR LINEAR ACTUATORS
William K. Schon, Piqua, Ohio, assignor to Lear, Incorporated, Piqua, Ohio, a corporation of Illinois
Application February 16, 1945, Serial No. 578,301
14 Claims. (Cl. 287—97)



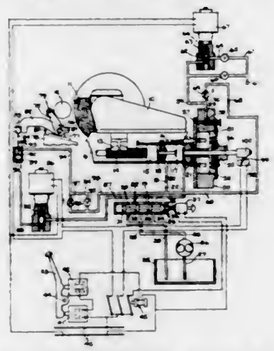
1. A coupling comprising, in combination, a first connection member formed with a bore therein and passages opening externally therefrom; a pin oscillatably mounted in said bore; and a second connection member extending through said pin and passages perpendicularly to said bore.

2,448,918
PELLET CONTAINER AND SELECTOR
Frank L. Sessions, Lakewood, Ohio
Application January 15, 1945, Serial No. 572,760
5 Claims. (Cl. 206—42)



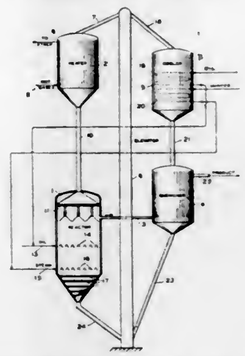
1. A pellet container and selector comprising a box having partitions forming a plurality of open-top pockets arranged in crisscrossed rows; and a loose, removable selector card above said partitions, covering all of said pockets; said selector card having a coupon portion comprising detachable coupons, each coupon being dimensioned and positioned to cover one pocket and said coupon portion of said card covering only the pockets lying wholly or partly in the same one quarter corner portion of said box.

2,448,919
STRAPLESS BRASSIÈRE
Louis Shulman, New York, N. Y.
Application October 23, 1946, Serial No. 705,091
1 Claim. (Cl. 2—42)



A strapless brassière having two breast receiving pockets and a top edge portion which is low between said pockets and curved upwardly at the top portions of said pockets and then downwardly to the end portions of the brassière, tapes mounted along said top edge portion in order to form a curved passage for each of said pockets for drawstrings, said tapes and passages extending from the center of the brassière at said low point between said pockets upwardly in a curved path to the top portions of said pockets, and then downwardly in a curved path to the end portions of the brassière, a drawstring extending through each of said curved passages and having free outer ends at the center of said brassière and having their inner ends attached to the end portions of said brassière, and stiffening members mounted on said pockets and extending from the bottom of each pocket along the sides of the pocket and arching towards points in the vicinity of the central portion of the top of the pocket in order to maintain the curvature of the top edge portion of the brassière when said drawstrings are drawn tight to hold the brassière on the body of a wearer.

2,448,920
COLLAPSIBLE VIEW FINDER
George P. Silberstein, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 8, 1946, Serial No. 675,409
10 Claims. (Cl. 33—64)

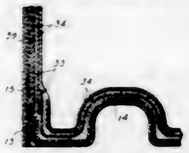


5. In a photographic device, the combination with a camera body, of a view finder comprising a base plate, a stud on said body on which said base plate is mounted so that it may be swung from a position substantially parallel with the optical axis of said camera to a position normal thereto, finder elements hingedly mounted to the opposite ends of said plate, spring means for automatically moving said elements in erected relation when said plate is swung to said first position, lugs carried by said body adjacent said plate, and a cam formed on each of said elements and adapted to engage one of said lugs when said plate is moved to said normal position, said lugs and cams cooperating to move said elements about their hinges when said plate is being swung to said normal position to move said elements to a collapsed position.

2,448,921
HYDRAULICALLY OPERATED FEEDING MECHANISM
Herbert A. Silven, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application November 1, 1946, Serial No. 707,214
8 Claims. (Cl. 51—2)

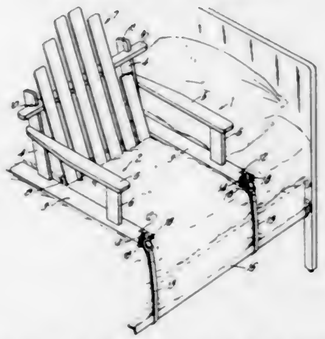
1. In a grinding machine having a rotatable grinding wheel, a transversely movable slide therefor, and a feeding mechanism for said slide to feed said slide rapidly toward and from a work piece to be ground, means to slow down the rapid approaching feed to a predetermined grinding feed to grind a shoulder on a work piece, and means including a work engaging feeler engageable with the work piece to be ground automatically to slow down the grinding feed to a slower predetermined grinding feed when the grinding wheel engages the peripheral portion of the work to be ground.

2,448,922
CONTINUOUS CRACKING PROCESS
Thomas P. Simpson and Sylvander C. Eastwood, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application January 23, 1946, Serial No. 642,833
5 Claims. (Cl. 196—55)



1. A process for conducting a high temperature vapor-phase cracking of hydrocarbons in the presence of steam during a short interval of time which comprises contacting said hydrocarbons in liquid phase with a mass of highly heated granular refractory material in a reaction zone to vaporize and rapidly raise the temperature of said reactants to reaction temperature, contacting water with said granular material in said reaction zone to produce steam and mix the same with said vaporized hydrocarbons, removing vapors from said reaction zone and passing such heated vapors into contact with a mass of cold granular refractory material in a quenching zone to thereby quench the vapors and halt said reaction, continuously removing granular material from said reaction zone and said quenching zone, transferring a portion of granular material so removed to a heating zone, transferring another portion thereof to a cooling zone, heating refractory material in said heating zone to an elevated temperature and transferring refractory material so heated to said reaction zone, cooling refractory material in said cooling zone by indirect heat exchange with liquid hydrocarbons and with water and transferring the cooled refractory material to said quenching zone, transferring liquid hydrocarbons heated by indirect heat exchange with hot granules in said cooling zone to said reaction zone for contact with granular material therein as aforesaid and transferring water heated by indirect heat exchange with hot granules in said cooling zone to said reaction zone for contact with granular material therein as aforesaid.

2,448,923
CASKET AND METHOD OF MAKING THE SAME
Max Skolnik, Chicago, Ill.
Application June 5, 1944, Serial No. 538,835
6 Claims. (Cl. 27—3)



4. A casket comprising a shell formed of a laminated sheet material composed of an outer sheet of felt paper impregnated with a high melting point pitch, an inner shell of unimpregnated paper and an intermediate layer of high melting point pitch binding the sheets of paper together,

a stiffening body secured to the interior of the shell, and a layer of magnesium oxychloride ce-

ment adhered to the outer face of the shell and forming a smooth hard paint base.

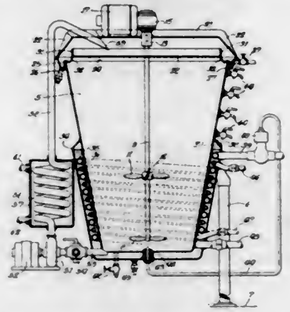
2,448,924
BED REST
Warren R. Smith, Crown Point, N. Y.
Application May 30, 1945, Serial No. 596,745
5 Claims. (Cl. 5—327)

1. A device of the character described comprising a substantially rigid element adapted to form a back support with its bottom resting on the surface of a bed, and two elements entirely separate and disconnected from each other and from said back support element adapted to form chair-like side arms; each of said side arm elements having an upstanding member rigidly attached thereto at the back thereof, and said back support element having a transverse member provided with notches therein adapted to engage the upstanding members of said side arm elements to form a chair-like assembly and to slide up and down on said members to vary the inclination of said back support.

2,448,925
MOTOR SYSTEM USING VOLTAGE REGULATING TRANSFORMER
Joseph G. Sola, River Forest, Ill., assignor, by mesne assignments, to Chicago Title and Trust Company, Chicago, Ill., a corporation of Illinois, trustee
Application March 21, 1946, Serial No. 655,963
8 Claims. (Cl. 318—389)

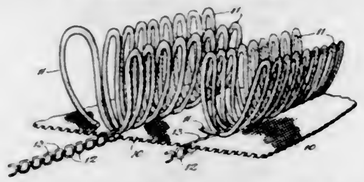
1. In a motor control system for energizing a motor from a transformer incapable of supplying the inrush starting current required by said motor but capable under normal loading of providing substantially constant secondary voltage over a wide range of variations in the primary voltage, the combination of means providing a primary energizing circuit for said motor including the primary winding of said transformer and a pair of contacts operable to open and close said circuit, means permanently connecting said motor to the secondary winding of said transformer to provide a secondary energizing circuit, means responsive to the sum of the voltages across said primary and secondary circuits when said motor is at a standstill for closing said contacts to effect starting and acceleration of said motor from said primary circuit, and means responsive to the current in said primary circuit for maintaining said contacts closed until said motor attains a predetermined speed, said voltage and current-responsive means being ineffective to maintain said contacts closed when said motor attains said speed, whereby upon opening of said contacts said motor is energized solely from said secondary energizing circuit.

2,448,926
PREFABRICATED DOUBLE WALL STRUCTURE
Emmet G. Stack, Marshfield, Oreg.
Application October 8, 1943, Serial No. 505,565
1 Claim. (Cl. 20—2)



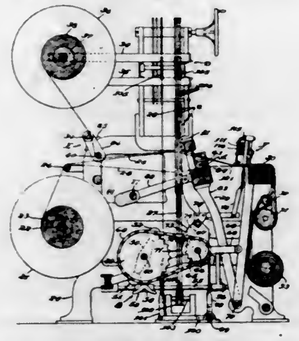
In a curved double wall structure, adjacent panels having adjacent ribs each including two courses of boards glued together side by side, one course being of greater width than the other and each course built up of short sections disposed end to end, those in one course overlapping those in the other to break joint therewith, each panel also having an outer covering secured to the outer face of its mentioned rib and an inner lining secured to the opposite face thereof with the narrow course of the rib forming a spacer between said lining and the covering, and means to secure together the wide courses of adjacent ribs.

2,448,927
METHOD OF AND APPARATUS FOR PROCESSING YEAST
Albert M. Fischer, Chicago, Ill., assignor of forty per cent to John E. Mistarz, Chicago, Ill.
Application June 19, 1942, Serial No. 447,660
13 Claims. (Cl. 195—134)



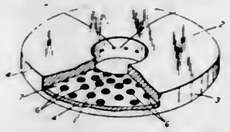
1. The method of treating brewers pitching yeast which comprises rotating a batch of such yeast substantially horizontally in a stationary conically tapered treatment tank having its large end uppermost, so as to produce a slower rate of rotation of the yeast-water mixture on the top level than on the lower levels in close proximity to the agitator, whereby all impurities throughout the body of the mixture, including those in contact with the side walls of the tank, which are of lighter specific gravity than that of healthy yeast cells are caused to flow to the surface and to move outwardly under centrifugal force, and then causing these impurities to be discharged from the upper portion of said conical tank by in-flowing water into the lower portion of said tank.

13. In apparatus for treating brewers pitching yeast, the combination of a stationary tank of conical taper with its axis vertically disposed and having its smaller diameter at the bottom, said tank adapted to contain a batch of yeast-water mixture, power driven agitator means in the lower portion of said tank imparting horizontal rotary motion to the entire batch of yeast and water within the tank at a velocity tending to cause impurities of lighter specific gravity than healthy yeast cells to move outwardly under centrifugal force and to flow to the surface, the conical shape of said tank causing the upper level of the batch to have a slower rate of rotation than lower levels thereof, said tank having relatively smooth in-



ner walls whereby such impurities as are impelled outwardly into contact with said walls below the surface will be deflected upwardly toward the surface a spill edge adjacent the upper portion of said tank over which said impurities are adapted to be discharged, a valve controlled water inlet pipe for introducing water into the lower portion of the tank without disturbing the rotary motion of the batch for controlling the level of the batch so as to govern the rate of spill over said spill edge, a screen disposed above said spill edge of the tank, and circulating means including a pump for drawing the yeast-water mixture from said tank and discharging it up over said screen for precipitation down through said screen back to said tank.

2,448,928
RUG
William F. Stahl, Kenilworth, Ill., assignor, by direct and mesne assignments, to Libertyville Textiles, Inc., Libertyville, Ill., a corporation of Illinois
Application September 28, 1945, Serial No. 619,133
3 Claims. (Cl. 2—278)

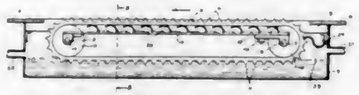


1. A rug, comprising a finished fabric base, pile warp threads forming loops, and stitching threads extending through the base and around the lower portions of the loops to secure them to the base, said stitching threads being covered with a resilient material which yields upon the pulling of the loops.

2,448,929
LOOM
Robert E. Walliser, Libertyville, Ill., assignor, by mesne assignments, to Libertyville Textiles, Inc., Libertyville, Ill., a corporation of Illinois
Application February 24, 1945, Serial No. 579,537
5 Claims. (Cl. 139—38)

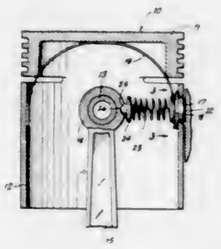
1. In a loom of the character set forth, equipped with means for advancing ground warp and pile warp threads, means for raising and lowering said ground warp and pile warp threads, and with shuttle means for periodically weaving a weft thread between said warp threads, a plurality of needles mounted for movement in vertical planes always parallel with vertical planes passing through said warp threads, said needles being also mounted for turning movement, said needles being provided with hooked ends, means for rotating said needles when said pile warp threads are raised to bring said hooks into a position behind a plurality of pile warp threads, and means for advancing said needles as said pile warp threads are lowered to form a loop in each of said pile warp threads.

2,448,930
POROUS FILTER
Edward Arthur Stokes, Guildford, England, assignor to Vokes Limited, Guildford, England
Application November 13, 1944, Serial No. 563,236
In Great Britain December 15, 1943
3 Claims. (Cl. 210—205)



1. A method of forming a hollow filtering element which includes inserting a suitable foraminated spacing layer between two layers of ceramic material in plastic state, moulding the element with the spacing layer in position so as to produce a filling of the interstices in the spacing layer of the plastic ceramic material integral with that of the two layers and removing the filling layer by heat.

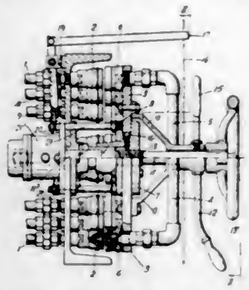
2,448,931
SELF-CLEANING DOOR MAT
Carl O. Swanson, Minneapolis, Minn.
Application November 30, 1944, Serial No. 565,873
8 Claims. (Cl. 15—97)



1. A self-cleaning door mat comprising a frame set in a floor substantially flush with the surface

thereof, said frame comprising spaced parallel, pedestrian supporting bars, a series of endless power actuated belts stretched over rollers below the floor surface and having their upper runs extending between said bars, said belts having integrally formed lugs adapted to project above the level of the upper edges of the bars to clean

pedestrian shoes, a receptacle under and substantially coextensive with the length of the frame, fluid supply means to the receptacle for washing the belts and lugs as the belts travel their under runs between said rollers, and means for wiping surfaces of the belts and lugs after they have been washed and before they return to shoe cleaning elevation.

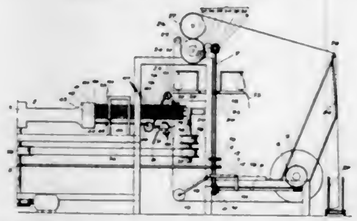


2,448,932
PISTON DEVICE
Charles M. Thomas, St. Louis, Mo.
Application May 5, 1945, Serial No. 592,121
14 Claims. (Cl. 309—5)

1. In a device for taking up lost motion in pistons operating within cylinders, a sleeve adapted to be inserted in an opening through the piston wall, projections on the outside of the sleeve for engagement with the inner surface of the piston to delimit outward movement of the sleeve relative to the piston, and a wear block slidably supported within the sleeve, said wear block being of less thickness than the axial length of the sleeve, whereby the sleeve and the wear block form a spring receiving pocket on the inner portion of the device.

2,448,933
CHANGE-OVER MECHANISM FOR FLUID-FLOW SYSTEMS
Percival Edward Thomas, London, England, assignor to Sterling Industries Limited, London, England
Application January 20, 1947, Serial No. 722,981
In Great Britain February 5, 1946
10 Claims. (Cl. 284—1)

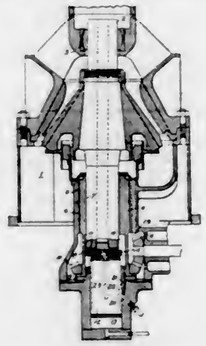
1. A fluid flow change over device comprising a plurality of supports one carrying at least one self-closing valve terminating a fluid flow line and the other carrying a plurality of self-closing valves terminating respectively different flow lines and means to move the supports relatively to one another to bring the self-closing valves



respectively on them selectively into opening fluid flow co-operation.

2,448,934
SLITTING MACHINE
Henry E. Van Derhoef, Rochester, N. Y., and Malcolm P. Davis, Sarasota, Fla., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 15, 1946, Serial No. 662,172
4 Claims. (Cl. 164—61)

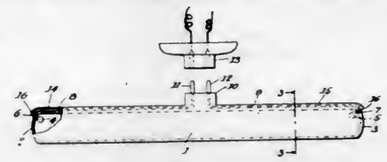
1. A slitting machine comprising, in combination, a support, a track carried thereby, a carriage movably mounted on the track, a roller carried by the carriage, a shaft, a slitting knife positioned coaxially of the roller and on the shaft, a stub shaft carried by the carriage, a slitting knife carried thereby, there being axial play in the stub shaft, helical meshing gears positioned one on the shaft coaxially with the roller and the other on the stub shaft to exert an end thrust on said stub shaft to operably engage the knife on the stub shaft with the knife coaxially mounted with respect to the roller.



2,448,935
SECTIONAL WEAVING LOOM
Pierre Georges Emile Auguste Vanlaer, Le Cannet-Rocheville, Alpes-Maritimes, France
Application December 13, 1946, Serial No. 716,053
In France October 15, 1946
9 Claims. (Cl. 139—18)

1. A sectional weaving loom with centrifugal weft drive comprising a central rotor, a number

of vertical warps, disposed tangentially to said rotor, rows of cams adjustably mounted on said rotor and adapted to shift the warp yarns and form the shed successively in each section; a horizontal impeller plate revolving at high speed for each section, travellers shot through the shed by a centrifugal effect produced by said impeller plates, means for guiding each traveller of one impeller plate to the impeller plate of the following section through the shed and means whereby the said travellers draw the weft yarns, pick by pick, between the warp yarns.



2,448,936
STEP BEARING FOR GYRATORY CRUSHERS
Claiborne C. Van Zandt, Oconomowoc, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application June 8, 1944, Serial No. 539,294
8 Claims. (Cl. 241—215)

1. In a gyratory crusher of the type having an axially slidable main shaft member with its lowed end gyrated about an axis of gyration by a gyrating mechanism and supported by a step bearing having an upwardly spherically surfaced laterally movable step washer member supported in thrust bearing relation on a substantially flat upper bearing surface of a step member, pressure lubricating and cooling means for said step bearing, comprising means forming a continuous passage for supply of lubricant under pressure from the frame of the crusher through the upper bearing surface of said step member directly to the space within the inner opening of said step washer member, and a plurality of ducts fully walled in by and extending through the body of said washer member from said inner opening outwardly in angularly spaced radiating relation and opening through the periphery of said washer member, said ducts serving to conduct cooling and lubricating fluid in heat transferring relation to the bearing surfaces of said washer member to cool said washer and lubricate the shaft gyrating mechanism.

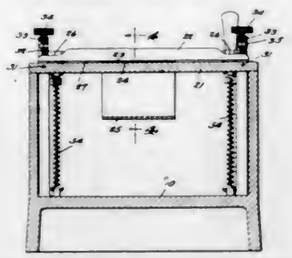
2,448,937
NEON LIGHT
George L. Walter, Los Angeles, Calif.
Application July 3, 1945, Serial No. 602,980
2 Claims. (Cl. 176—126)

1. A neon light comprising a tube closed at its ends, electrodes within said tube adjacent the ends thereof, electric conductors lying along the outer side of the wall of said tube and extending at their outer ends through the outer ends of said tube to said electrodes, respectively, a plug intermediate the ends of said tube including a pair of prong contacts, to which contacts the

inner ends of said conductors are connected, respectively, said tube being formed of glass, and the glass being cast over said conductors for sealing the same in the glass to prevent escape of gas from the ends of said tube past said electrodes.

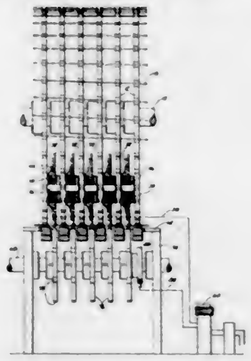
2,448,938
SANITARY PROTECTIVE APPLIANCE
Anthony Wayne, New York, N. Y.
Application September 25, 1945, Serial No. 618,466
1 Claim. (Cl. 128—285)

A protective appliance comprised of a shield and a hollow fingerlike element, the fingerlike element being foldable in accordion fashion and positioned on and joined to the face of the shield, the shield being formed with an opening into the fingerlike element and provided with an adhesive coating on its rear face said shield being formed with an integral non-adhesive lip or extension and a removable gauze cover over the adhesive coating, the said cover having an integral non-adhesive lip coextensive with said first lip suitable for gripping to facilitate the removal of the cover and the exposure of the adhesive coating, and said fingerlike element being collapsible against the face of said shield.



2,448,939
THIOGLYCOLIC AMIDE COUPLERS
Arnold Weissberger, Charles J. Kibler, and Richard V. Young, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 10, 1944, Serial No. 539,780
19 Claims. (Cl. 95—6)

1. The method of producing a colored photographic image in a silver halide emulsion layer which comprises incorporating in said layer a metallic salt of a coupler compound having the formula:

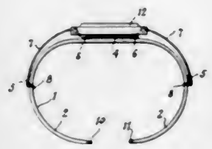


where R'' is selected from the class consisting of 2-hydroxy mononuclear aryl radicals, 5-hydroxynaphthyl radicals, 1-benzoyl acetanilido radicals, acetoacetylanilido radicals, omega-cyano acetophenone radicals, and 3-(1-phenyl-5-pyrazolone) radicals, R and R' are selected from the class consisting of hydrogen and alkyl groups, and X is selected from the class consisting of hydrogen and acetyl groups, exposing said layer and developing it with a primary aromatic amino developing agent.

2,448,940
MACHINE FOR MAKING PROTECTIVE SLEEVES
Robert Young Whittemore, Burlington, N. C., assignor to A. J. Whittemore & Sons, Inc., Burlington, N. C.
Application January 30, 1946, Serial No. 644,260
4 Claims. (Cl. 154—42)

1. A device for forming a sheet of material into a protective sleeve with the opposite ends of the sheet being beveled, comprising a frame, a longitudinal bar mounted on the frame, a clamp pivotally mounted at each side of the frame and having an inner free edge adapted to retain the beveled ends of the sheet in overlapped position after one of said ends has had an application of cement, a second bar resting on the overlapped ends, a U-shaped member pivoted on each end of the first-mentioned bar and swingable over an adjacent end of the second bar and means carried by each U-shaped member for applying pressure on the second bar, whereby to cause the second bar to press the overlapped ends of the sheet of material against the longitudinal bar.

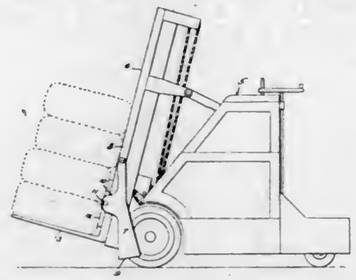
2,448,941
METHOD FOR FABRICATING WELDED WIRE FABRIC
Theodore Harry Wickwire, Jr., Ardmore, Pa., assignor to Theodore H. Wickwire, Jr., Sophie H. Wickwire, Roma A. Wickwire, and Hedge Wickwire, co-partners doing business as Theowick Company, Philadelphia, Pa.
Original application June 18, 1943, Serial No. 491,270, now Patent No. 2,410,766, dated November 5, 1946. Divided and this application June 25, 1945, Serial No. 601,400
4 Claims. (Cl. 140—112)



1. That improvement in the art of manufacturing welded wire fabric which includes continuously and simultaneously moving a plurality of wire strands, successively placing transverse wires across said strands, and electrically welding the transverse wires in succession by successively welding each transverse wire to each of the different wire strands.

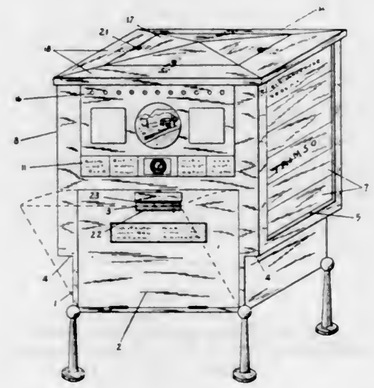
2,448,942
ALKYLATION OF PHENOLIC COMPOUNDS
De Loss E. Winkler and Robert H. Mortimer, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 9, 1944, Serial No. 534,816
13 Claims. (Cl. 260—621)

13. A process for the alkylation of a phenolic compound containing at least one hydrogen atom attached to the aromatic nucleus which comprises reacting in the vapor phase the phenolic compound with a member of the group consisting of the saturated aliphatic alcohols and the saturated aliphatic ethers in a mole ratio of about 1:3 to about 1:5 at a pressure of at least about 10 atmospheres but below about 100 atmospheres in the presence of a catalyst comprising an activated alumina.



2,448,943
WRIST WATCH BAND
Ivan Wolff, New York, N. Y.
Application June 29, 1945, Serial No. 602,192
6 Claims. (Cl. 224—4)

4. In a wrist band of the character described, a C-shaped band of stiff but springy material, a pair of strap members provided with loops at their ends, an expansible spring located between the strap members and having its ends attached to a loop at one end of each of the straps, a ring in the loop at the other end of each of the straps, said rings fitting around the band, shoulders on the band for limiting the movement of the rings toward the center of the band, and a watch engaged by the straps and held thereby against the outer face of the band.

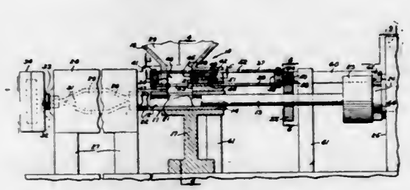


2,448,944
UNLOADING DEVICE FOR MOBILE TRACTORS
Robert L. Woodward, Jr., Nashville, Tenn.
Application May 23, 1946, Serial No. 671,781
4 Claims. (Cl. 214—82)

1. The combination with a pivoted load carrier of a mobile tractor, of an unloading mechanism embodying arms pivotally connected to the load carrier and adapted to contact the floor surface below the load carrier, a pusher plate secured to the arms and adapted to engage the load, moving the load from the load carrier, as the load carrier is lowered and the arms moved into contact with

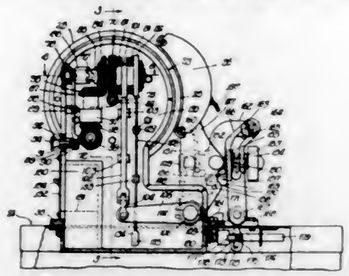
the floor surface, during the backing of the tractor.

2,448,945
COMBINED MAILBOX AND ILLUMINATED SIGN
Erhard Zacharias, New York, N. Y., assignor to Postal Advertising Corporation, New York, N. Y., a corporation of New York
Application June 22, 1944, Serial No. 541,530
2 Claims. (Cl. 40—132)



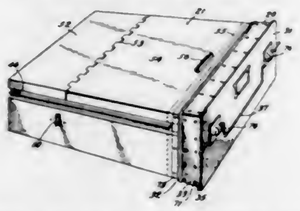
1. A combined postal mailbox and advertising device consisting of, first, a mailbox of usual shape, comprising a container for mail; second, compartments provided outside of said mailbox adjacent to the four side walls of the same; two of said compartments being formed partly by walls of the mailbox and partly by frames integral with said mailbox and formed by extensions projecting laterally and upwardly from two opposite side walls of the mailbox; third, of exchangeable advertising panels removably inserted in said compartments, said panels being preferably transparent to be illuminated by appropriate means placed in said compartments; fourth, a detachable hood covering the mailbox and all the compartments surrounding said mailbox, said hood being provided with doors, each of them situated in the path of one of the compartments carrying the exchangeable advertising panels, thereby permitting easy exchange of the same.

2,448,946
METHOD FOR INSOLUBILIZING HYDROLYZED ETHYLENE VINYL ESTER POLYMERS
Witty L. Alderson, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 20, 1944, Serial No. 541,269
5 Claims. (Cl. 260—86)



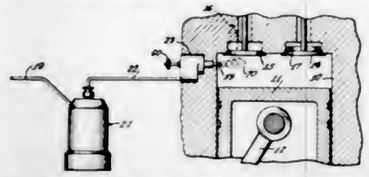
1. A process which comprises blending an organic solvent soluble completely hydrolyzed ethylene-vinyl ester polymer, in which the ratio of ethylene/vinyl organic ester is greater than 2.5:1, with from 2% to 25% by weight of said polymer of a compound selected from the group consisting of acyl peroxides and inorganic peroxides, and then heating the blend at a temperature of from 100° C. to 200° C. until said polymer becomes insoluble in organic solvent in which it was initially soluble, said polymer being that obtained by hydrolyzing the copolymerization product of ethylene and a vinyl alcohol ester of a saturated aliphatic monocarboxylic acid.

2,448,947
INJECTION MOLDING APPARATUS
Harry J. Arthur, Chicago, and Harrell S. McCrory, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 4, 1945, Serial No. 586,462
7 Claims. (Cl. 18—30)



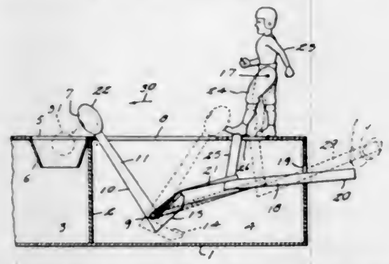
7. In an injection apparatus, a horizontal injection cylinder having an inlet, an injection plunger reciprocatable therein, a compound supply hopper having the outlet in spaced vertical alignment with an inlet of said cylinder, means including spaced vertical walls providing a passage between said outlet and inlet, a pair of spaced upper and lower slides having offset openings and reciprocatable as a unit on said means and spanning said passage, said slides and spaced vertical walls forming a chamber for receiving metered charges of compound from said hopper, an adjustable member in said means and between said slides forming one wall of said chamber for varying the normal capacity thereof, and an operative connection between said plunger and said slides for moving said slides during an advance of said plunger to variably uncover the opening in said upper slide to permit a metered charge of compound to be received in said chamber from said hopper while maintaining the bottom of said chamber closed by said lower slide, the volume of such charge depending on the degree of uncovering of said upper slide opening and controlled by the distance the plunger has advanced, the opening in said lower slide being positioned to open the chamber to the inlet of said cylinder during the retraction of said plunger after the upper slide has closed the hopper outlet.

2,448,948
IRONING MACHINE
Henry H. Babcock, Oak Park, Ill., assignor, by mesne assignments, to Conlon-Moore Corporation, Cicero, Ill., a corporation of Delaware
Application June 19, 1944, Serial No. 540,907
15 Claims. (Cl. 38—61)



6. In an ironing machine, a gear housing, a motor secured to said housing, a roll extending about and housing said motor mounted for rotation about a fixed axis, a main drive shaft substantially coaxial with the shaft of said motor driven thereby and extending into said gear housing, a countershaft substantially perpendicular to and driven by said main shaft, a roll drive shaft, means for optionally establishing driving connection between said countershaft and said roll drive shaft, a cooperating shoe movable to and from said roll, a rockably mounted shoe operating shaft, a sleeve loose on said countershaft comprising an eccentric, half-revolution clutch means for clutching and declutching said countershaft to and from said sleeve, and operating connections between said eccentric and said shoe operating shaft.

2,448,949
DRAWER FOR REFRIGERATED LOCKERS
William McKinley Baird, Chicago, Ill.
(Original application March 22, 1944, Serial No. 527,581. Divided and this application March 26, 1947, Serial No. 737,197
1 Claim. (Cl. 62—89)



A drawer for refrigerated lockers cooled by forced circulation of air comprising a front head portion having a pair of rearwardly extending fixed angle members, a rear imperforate container portion having a pair of fixed extensions extending forwardly beyond said container portion, the forward portions of said extensions contacting the rear portions of said angle members and leaving a space between said container portion and said front head portion for the downward passage of the forced air therethrough for cooling the front of said container portion, and means extending through said extensions and said angle members for rigidly attaching said container portion to said front head portion.

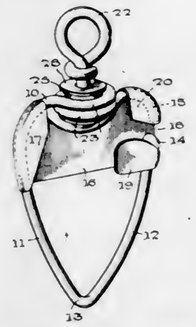
2,448,950
INTERNAL-COMBUSTION ENGINE AND METHOD OF OPERATING
Everett M. Barber, Wappingers Falls, and Jay B. Malin, Fishkill, N. Y., assignors, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 14, 1944, Serial No. 568,138
4 Claims. (Cl. 123—32)

1. In the operation of an internal combustion engine, wherein air containing insufficient fuel to support combustion is introduced into the cylinder combustion space and compressed therein, fuel is injected into a localized portion of the compressed air, the combustible fuel vapor-air mixture produced from said first increment of injected fuel is spark ignited substantially as soon as formed to establish a flame front, and the injection of fuel is continued after ignition while the locus of fuel injection and the compressed air are moved relatively to each other in an orderly manner during the period of fuel injection to thereby progressively impregnate with fuel fresh localized portions of the compressed air to form additional quantities of combustible fuel vapor-air mixture which are ignited by the flame and burned substantially as soon as formed, the improvement which comprises initiating injection of fuel on each cycle at a rate to impregnate the first increments of air with fuel at fuel-air ratios above the spark ignitible limit to provide for easy ignition of the first increment of injected fuel and the establishment of a flame front, and then decreasing the rate of fuel injection to impregnate succeeding increments of the air at fuel-air ratios below the spark ignitible limit but above the combustible limit, to thereby obtain improved fuel economy.

2,448,951
TOY BANK
Joseph L. Baum, Hartford, Conn.
Application June 6, 1946, Serial No. 674,710
3 Claims. (Cl. 46—4)

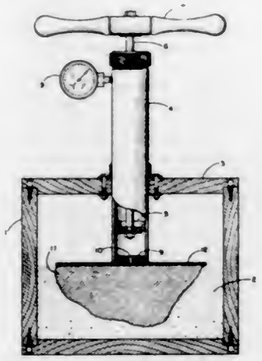
1. A toy bank comprising a receptacle formed with a coin receiving opening on the upper surface at one end thereof, an actuating crank having a vertical leg extending above said receptacle and a horizontal leg extending from one end of said receptacle, a pivot for said crank above said upper surface, a second crank having a vertical arm extending above said receptacle and a horizontal arm disposed within said receptacle, a pivot for said second crank within said receptacle engaging said vertical arm, a coin receiving member on the upper end of said vertical arm, a stop plate on the free end of said horizontal arm, a resilient member fixed at one end in said receptacle extending above said stop plate and fixed to a leg of said first crank for biasing the vertical leg toward the vertical arm, whereby said vertical leg may strike the vertical arm after the resilient member has been tensioned and released for rocking said coin receiving member toward the coin receiving opening, said plate engaging said resilient member after initial rocking of said second crank biasing said second crank to the initial position.

2,448,952
METHOD FOR OBTAINING DISPERSIONS OF POLYTETRAFLUOROETHYLENE-ETHYLENE COPOLYMERS
Kenneth L. Berry, Hockessin, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 26, 1945, Serial No. 607,256
2 Claims. (Cl. 260—31.8)



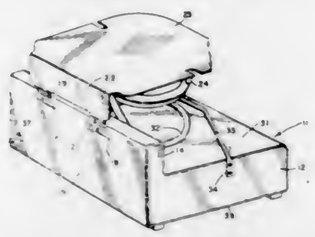
1. A process for obtaining a dispersion of tetrafluoroethylene/ethylene copolymer comprising finely divided particles of said copolymer suspended in a liquid organic medium, said process comprising dissolving tetrafluoroethylene/ethylene copolymer containing combined tetrafluoroethylene in major amount up to 85% by weight of said copolymer in an organic liquid which is heated substantially to its boiling point and which boils above 175° C. and which is a solvent for said copolymer at temperatures above 175° C. and a non-solvent for said copolymer below 175° C., maintaining the temperature of the solution at substantially its boiling point until any water contained in the solution is completely removed, cooling the solution slowly to the temperature of incipient gelation, and then while maintaining the solution at said last mentioned temperature vigorously agitating the solution until precipitation of the copolymer in finely divided form is substantially complete, and until said dispersion of the copolymer in said organic liquid is obtained, said organic liquid boiling above 175° C. being a neutral ester of a saturated dicarboxylic acid containing at least 5 carbon atoms, said ester being free of multiple carbon-to-carbon linkages and containing from 7 to 18 carbon atoms.

2,448,953
DOOR HOLDER
Enoch J. Blackmon, Sherman, Tex.
Application April 5, 1945, Serial No. 586,730
2 Claims. (Cl. 16—66)



1. A door holder including, a holder member adapted to be secured to a door frame and project horizontally therefrom, a vertically disposed pivot member at the outer end of the holder member spaced from the surface of the door frame and lying in a plane extending through the door hinges vertically to the plane of the door frame, an elongate tubular housing swingably secured at one end to the pivot member and swingable through an arc of approximately 180 degrees thereon, an elongate reciprocating member telescoping the housing and adapted to have its outer end pivotally secured to the free side of a door, a helical coiled tension spring completely enclosed in the housing and surrounding the inner portion of the reciprocating member and having one end secured to the housing adjacent the outer swinging end thereof, a spring connecting and adjusting member threaded onto the inner end of the reciprocating member, the other end of the elongate helical coiled tension spring being secured to said spring connecting member under tension whereby the spring resists further telescopic movement of the reciprocating member into the housing and normally urges the reciprocating member outwardly from within the housing, the connecting member being adjustable on the reciprocating member for adjusting the force exerted by the spring, the pivot element on which the housing is swingably mounted being spaced from the plane of the surface of the door a greater distance than the point of connection of the outer end of the reciprocating member with said door when the door is in the closed position, whereby the force of the tension spring is applied to the reciprocating member to normally urge the door toward closed position, and whereby the tension spring acts upon the reciprocating member to urge the door toward further open position when the door is swung open through an arc in excess of 90 degrees, the reciprocating member being movable freely with respect to the housing to permit the door to swing through an arc of approximately 180 degrees.

2,448,954
FISHING LINE SWIVEL
Channing M. Brown, El Paso, Tex.
Application November 17, 1944, Serial No. 563,924
6 Claims. (Cl. 43—28)



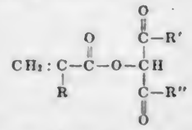
6. In a fishing line swivel, a length of wire in the form of a loop having end portions of different width and side portions converging from the wider end to the opposite end with the ends of the wire spaced apart to form an entrance to said loop at the side and adjacent said wider end of the loop, that portion of the wire constituting the wider end having an open coil therein to form a circular opening in substantial alinement with the converging end of the loop, a cylindrical sleeve rotatable in said circular opening, means for limiting movement of the sleeve axially of said opening, an eye-member swiveled in said sleeve, and a plate extending across said loop, said plate spanning said entrance and having reversely bent edge portions engaged around said wider end of the loop at opposite sides of said coiled portion and around the sides of said loop.

2,448,955
METHOD AND APPARATUS FOR MEASURING PERMEABILITY
William A. Bruce, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 1, 1945, Serial No. 597,016
2 Claims. (Cl. 73—38)

1. A method for determining the permeability of a rock core from a fragment thereof which comprises selecting a fragment of said core of irregular configuration having at least one substantially flat face, arranging said fragment in a bed of loose particles with said substantially flat face exposed, building up a vacuum on said substantially flat face and observing the rate at which said vacuum is dissipated.

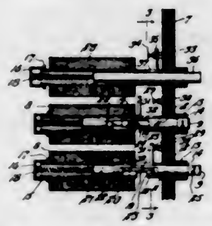
2,448,956
ELECTRIC PORTABLE STOVE
Edmund J. Christensen, Chicago, Ill.
Application August 22, 1946, Serial No. 692,357
2 Claims. (Cl. 219—37)

1. In a portable electric heating apparatus, a rectangular base structure affording a vertically projecting back bar, a rod type heating spiral having a plurality of heat elements and terminal wires extending into said back bar and obtaining electrical source connection therethrough, a supporting bail transverse of said base and anchored to side walls thereof in space relation to a floor panel of said base, and a reflector shelf having severable connection with the rear portion of said vertically projecting back bar and horizontally disposed above said heating element so as to reflect radiant heat downwardly while simultaneously affording lateral support to devices to be heated convectionally.



2,448,957
KNIFE HAVING REPLACEABLE BLADES
Joseph Ciarlone, Fitchburg, Mass.
Application June 24, 1947, Serial No. 756,593
2 Claims. (Cl. 30—329)

1. A knife having removable and replaceable blades comprising a blade holder of thin elongated form, a handle thereon, the holder having a slot along a narrow edge thereof, a flat pin on the holder and traversing the slot, and a thin flexible blade having a substantially circular opening at one end, said opening having a neck just receivable on the pin in edgewise condition relative thereto, the blade being pivotable on the pin down into the slot and the slot having a width to frictionally grip and hold the blade.

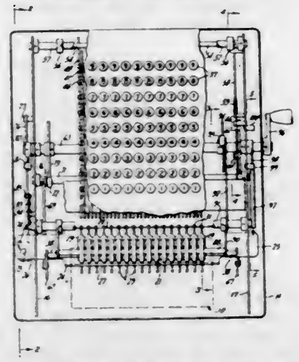


2,448,958
DIKETO ACRYLATES
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application December 8, 1945, Serial No. 633,879
3 Claims. (Cl. 260—486)

1. The acrylic acid and substituted acrylic acid esters having the general formula

where R is selected from the group consisting of hydrogen, chlorine, and methyl and ethyl radicals and R' and R'' are selected from the group consisting of alkyl and aryl radicals.

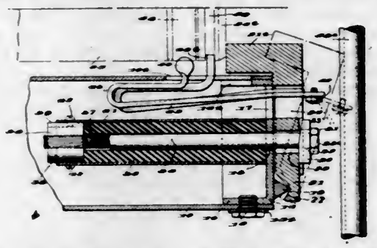
2,448,959
SOLENOID WITH PLUNGER AND LATCH
David Conlan, Brooklyn, N. Y., assignor to Conlan Electric Corporation, Brooklyn, N. Y., a corporation of New York
Application February 27, 1945, Serial No. 580,007
4 Claims. (Cl. 175—341)



1. Apparatus of the character disclosed comprising a tubular support, a solenoid winding about the same, a solenoid plunger operable in said tubular support, a magnetic latch pivoted on said plunger, an abutment on the tubular support engageable by the end of said pivoted latch to hold the plunger in retracted relation, a spring confined in said tubular support in back of said plunger for projecting the latter when the latch is released and means for limiting the projecting movement of the plunger.

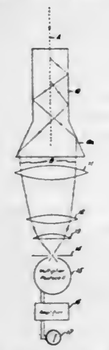
2,448,960
METHOD OF MAKING A HYDROCARBON CONVERSION CATALYST
Gerald C. Connolly, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 2, 1942, Serial No. 460,484
3 Claims. (Cl. 252—250)

1. Process of preparing a catalyst adapted for the conversion of hydrocarbon oils, which comprises intimately mixing solid aluminum hydrate with a gelatinous hydrous oxide of silicon and with sulfuric acid, thereafter drying the acid-treated mixture to an extent sufficient only to concentrate the acid substantially and to form aluminum sulfate, adding a volatile base to the partially dried mixture, and thereafter washing and drying the resulting product.



2,448,961
KEY PUNCH
Lester L. Curtis, Newark, N. J., assignor to The McBee Company, Athens, Ohio, a corporation of Ohio
Application January 18, 1947, Serial No. 722,790
20 Claims. (Cl. 164—112)

1. Apparatus for notching a card or the like provided with perforations disposed in parallel adjacency to its edge comprising a support for such card, punch and die means, key operated means for selectively determining the positioning of said punch and die means with respect to the perforations of a card on said support, means for actuating said punch and die means to notch a card on said support to selected perforations, and means for relatively shifting said punch and die means and said support a distance substantially equaling the center to center distance between adjacent card perforations.



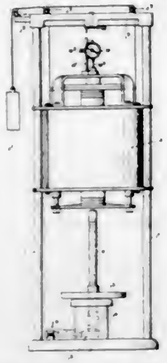
2,448,962
ROCKET STOP ASSEMBLY
Walter H. D'Ardenne, Jenkintown Manor, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 25, 1946, Serial No. 699,298
14 Claims. (Cl. 89—1.7)

1. A rocket stop assembly for muzzle loading electrically fired rocket launchers comprising a resiliently mounted rocket stop member adapted to be positioned near the rear end of the

launcher, and means mounted on said member for making electrical firing contact with a rocket in firing position in said launcher.

2,448,963
DETECTION OF HIGH-SPEED CHARGED PARTICLES
Robert H. Dicke, Princeton, N. J.
Application May 19, 1947, Serial No. 749,109
2 Claims. (Cl. 250—83.3)

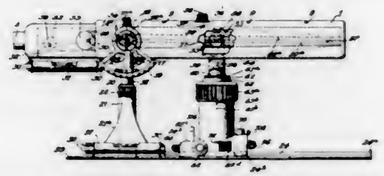
2. Apparatus for detecting high speed charged particles comprising a rod of transparent, optically isotropic, dielectric material having an end portion conically expanded at an angle to the longitudinal axis of the cell determined by the relation



$$\cos 2\phi = 1/\beta\, n$$

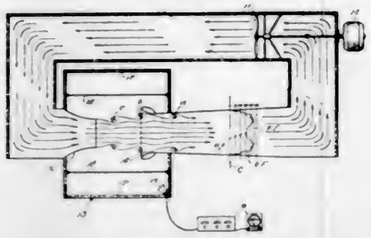
wherein ϕ is the angle, β is the ratio of the speed of the particle to the speed of light and n is the index of refraction of the dielectric material, a photocell, means for directing light emitted from the expanded end portion of the rod upon the photocell, and means for registering impulses generated in the photocell.

2,448,964
APPARATUS FOR TESTING MOLDING SAND
Harry W. Dietert, Detroit, Mich.
Application April 10, 1944, Serial No. 530,404
3 Claims. (Cl. 73—16)



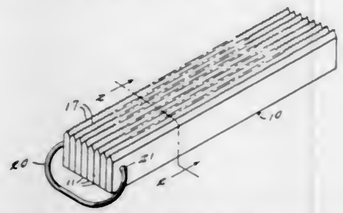
1. In an apparatus for testing the expansion of compacted molding sand when heated, an electric furnace having a tubular resistor for forming therein a heating chamber, a refractory tube extending downward from the upper end of said furnace into said heating chamber, a refractory rod slidable within said tube and forming with its lower end an abutment for the compacted sample to be tested, a spring sleeved upon

said rod with its upper end engaging a collar thereon, said spring being located within a recess in said tube and abutting against a shoulder of said tube for counterbalancing the weight of said rod, a gage mounted on said furnace in operative relation to the upper end of said rod to measure the displacement thereof, a second refractory rod extending upward within said



heating chamber and forming an opposite abutment for the sample to be tested, an open-ended refractory tube in which the sample is compacted telescopically engaging said refractory rods, and means for supporting said furnace for relative movement with respect to said second refractory rod to afford access to the open ended refractory tube containing the sample.

2,448,965
AUTOMATIC RECORDING STADIA INSTRUMENT
Donald H. Drayer, Brookmont, Md.
Application September 9, 1943, Serial No. 501,705
18 Claims. (Cl. 346—2)

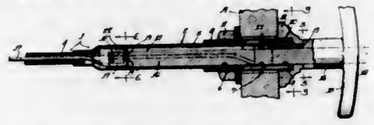


14. In an instrument of the class described, an assembly having a base with a plane under surface adapted to be supported upon a plane horizontal supporting surface capable of receiving indicia thereon, an optical system in the said instrument having an optical axis and fiducial element therein movable relative to said axis so as to be alignable in conformity with the apparent position of a distant object viewed by the said optical system, printing means, means to modify the position of the said fiducial element relative to said axis and printing means, said modifying means also being mechanically linked to said printing means whereby the said printing means will designate a value determined at least in part by the position of the said fiducial element, said printing means being supported above the said supporting surface and movable relative thereto and into engagement therewith to print thereon indicia indicative at least in part of position of said fiducial element within the said optical system.

2,448,966
CONTROL OF VORTEX FLOW BY PRESSURE WAVES
Elisha N. Fales, Washington, D. C.
Application November 19, 1941, Serial No. 419,809
8 Claims. (Cl. 73—147)

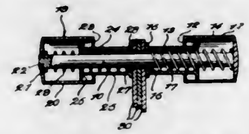
1. The method of reducing the intensity of vortices in fluid flowing under such conditions that vortices are formed, comprising causing pressure waves originating in said vortices to impinge upon surfaces so located as to reflect portions of said waves to the point of origin of and in out-of-phase relation to the vortices being formed by the conditions creating such vortices.

2,448,967
BILLIARD CUE TIP FILE
Grigsby J. Fleshman, Oak Hill, W. Va.
Application June 17, 1946, Serial No. 677,315
1 Claim. (Cl. 69—20)



A cue tip file comprising a body comprising a series of longitudinally extending parallel cutting blades, each of said blades having a cutting edge of triangular cross section forming a series of parallel spaced apart longitudinal grooves between each of said blades, said blades formed with triangular teeth along the upper edge thereof, the teeth of adjacent blades being aligned transversely of said body forming a series of transverse longitudinally spaced apart pyramidal teeth on said body, said longitudinal grooves being of a depth greater than the height of said teeth whereby material removed by said teeth may pass freely from said file.

2,448,968
CONTROL DEVICE
George E. Franck, Riverside, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 13, 1945, Serial No. 604,898
8 Claims. (Cl. 74—502)

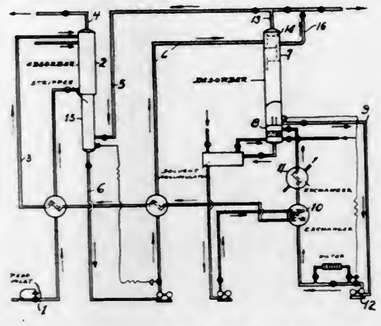


1. A control device comprising a stationary tubular support, an actuator extending through the support and fitted therein so as to be capable of moving lengthwise and turning about its axis relatively thereto, said support containing an eccentrically disposed bore section, a locking block located in said eccentric bore section and

engaged with the side of the actuator, the sides of the actuator and block in engagement with each other being so shaped that the block may remain stationary when the actuator moves lengthwise but must turn with the actuator when

the latter turns, and the parts being so proportioned that when the actuator is in one angular position it can move freely and when it is turned from that position the block binds in the support and locks the actuator.

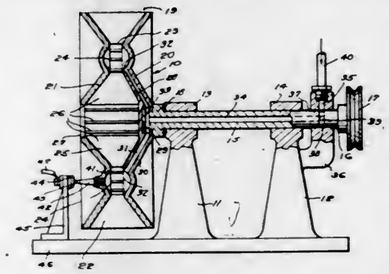
2,448,969
KEY RETAINER
Roy Bentley French, Superior, W. Va.
Application June 18, 1946, Serial No. 677,559
2 Claims. (Cl. 70—456)



1. A key retainer comprising a bar upon which keys are adapted to be supported, a head at one end of the bar, a keeper detachably secured to the end of the bar opposite the head, a spring pressed plunger encircling the bar and telescopically entering the head and a spring pressed plunger encircling the bar and entering the keeper said plungers engaging opposite sides of one or more keys supported on the bar and holding said keys substantially midway between opposite ends of the bar and cooperating flanges on the head, the keeper and the plungers to limit the movements of the plungers toward one another.

2,448,970
PRESERVING TINNED CRUSTACEAN MEAT
James J. Ganucheau, New Orleans, La., assignor to Southern Shell Fish Company, Inc., New Orleans, La., a corporation of Louisiana
No Drawing. Application March 19, 1946, Serial No. 655,600
4 Claims. (Cl. 99—188)

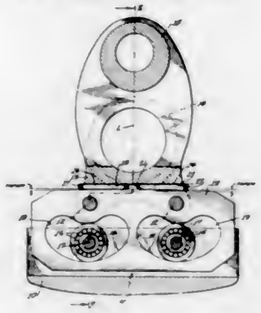
1. The method of canning the meat of crabs and other crustaceans which consists in depositing the meat in a can, depositing in the can a regulating mixture of a solution of common salt containing disodium phosphate and citric acid to cover the meat in the can, said mixture having a hydrogen-ion concentration between 4 and 6.5 pH, and thereafter sealing the can and subjecting the same to a sterilizing temperature.



2,448,971
PROCESS FOR STRIPPING IN BUTADIENE EXTRACTION
Richard A. Given, Lake Charles, La., and William S. Craft, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application January 4, 1944, Serial No. 516,930
2 Claims. (Cl. 260—681.5)

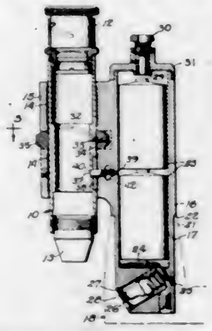
1. In a process for the extraction of butadiene from a mixture of hydrocarbons containing both butadiene and butene by means of an ammoniacal cuprous acetate solution in which the ammoniacal cuprous acetate solution containing the dissolved butadiene and butene after it has contacted and has been separated from the said mixture of hydrocarbons is stripped of butene by passing in countercurrent flow to the butadiene, the improvement which comprises heating the stripped ammoniacal cuprous solution to remove and separate a substantial fraction of the dissolved butadiene, passing the heated solution into the top section of a desorber above an upper plate thereof, removing

the butadiene vapor from the top section of the desorber and, recycling this butadiene vapor for said stripping of the ammoniacal cuprous salt solution of the butene, passing the heated stripped ammoniacal cuprous acetate solution after the separation of the first fraction of butadiene down said desorber in countercurrent flow to a second fraction of butadiene obtained by further heating the heated stripped solvent to desorb the remaining fraction of butadiene in a lower part of the desorber below said upper plate of the said desorber, and removing this butadiene as a side stream from the desorber below said upper plate.



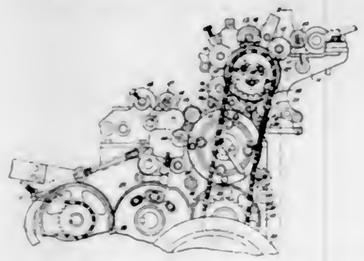
2,448,972
INTERNAL-COMBUSTION ENGINE (TURBINE TYPE)
Edward W. Gizara, Amsterdam, N. Y.
Application October 20, 1944, Serial No. 559,591
3 Claims. (Cl. 60—41)

2. A turbine formed of one piece including a casing, a series of drive vanes, a suction fan, a baffle plate, a shaft and a gas inlet all formed in one single unit, said casing comprising a pair of spaced walls, said vanes connecting said walls, said baffle plate fan and one of said walls being connected, a circular combustion chamber formed by said walls, and surrounding said fan, said



vanes surrounding said combustion chamber, said baffle plate and one of the walls forming a circular gas feed space inlet to the combustion chamber.

2,448,973
DYNAMIC DAMPER SUPPORT
Alfred T. Gregory, Massapequa, and Chester C. De Pew, Farmingdale, N. Y., assignors to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y., a corporation of Maryland
Application February 22, 1945, Serial No. 579,234
5 Claims. (Cl. 74—604)

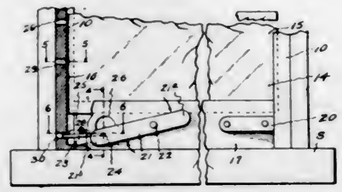


1. In a support for a dynamic damper having an oscillating mass for counteracting torsional vibrations in a shaft, the combination of a radial member on said shaft providing an abutment, a second member carrying the oscillating mass and providing an abutment, at least one fastening element securing said members together with their abutments in opposed relation in said plane, and means interposed between said abutments exerting a substantially constant pressure forcing said members apart.

2,448,974
MICROSCOPE MOUNTING WITH SELF-CONTAINED ILLUMINATOR
Eric S. Guttmann, Burbank, Calif., assignor to Albert S. Polan, E. G. Polan, L. M. Polan, Charles M. Polan, and Lake Polan, Jr., a copartnership doing business as Zenith Optical Company, Huntington, W. Va.
Application August 23, 1945, Serial No. 612,228
3 Claims. (Cl. 88—39)

1. A microscope comprising a b e providing an upstanding tubular projection open at its upper end and having laterally opening windows adjacent the bottom of the base, a hollow post shaped at its lower end to fit into said projection and be supported thereby in upright position while free to turn about its longitudinal axis, an electric lamp in the bottom of said post adapted to direct light laterally through one of said windows when alined with one of the latter, said post being adapted to receive batteries adapted for connection with said lamp, an arm projecting laterally from the upper end portion of said post and having a bore extending vertically therethrough parallel to the post axis, and a microscope having its sleeve projecting slidably through said bore and supported by said arm.

2,448,975
INKER
Charles W. Harrold and Henry F. Meyer, University Heights, Ohio, assignors to Harris-Seybold Company, a corporation of Delaware
Application September 5, 1942, Serial No. 457,494
25 Claims. (Cl. 101—349)



1. In an inker for a printing press, a plurality of parallel vibrating rollers, a gear on each of said rollers, an ink transmitting roller surrounded by said vibrating rollers, means for driving said ink transmitting roller, a wobble gear concentric with said last-named roller meshing with and driving each of said first-named gears, and interengaging means on said wobble gear and each of said first-named gears for reciprocating the vibrating rollers.

2,448,976
POLYMERIZATION OF ALPHA ALKYL STYRENES
Randall G. Heiligmann, Yeadon, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application July 20, 1945, Serial No. 606,294
8 Claims. (Cl. 260—91)

1. A process for polymerizing an alpha alkyl styrene in which the alkyl group contains not more than 3 carbon atoms, which comprises contacting said alpha alkyl styrene with a hydrogenating catalyst and an alkali metal hydrocarbon compound where the alkali metal is directly bonded to a hydrocarbon radical, at a temperature between 50° F. and 300° F. and a pressure between 500 and 2000 lbs. per square inch in the presence of an inert solvent.

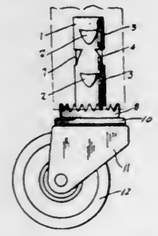
2,448,977
WINDOW LIFT AND FASTENER
Albert Hoekstra, San Antonio, Tex.
Application August 25, 1944, Serial No. 551,215
1 Claim. (Cl. 292—66)

A sash fastener comprising a support, a sash lift pivoted on the front surface thereof, said support having a socket formed therein and extending rearwardly from said front surface between the pivot point of said sash lift and the end of said support, said support having a slot formed therein and extending from the base of said socket through said end, said slot having two spaced walls and an inner third wall, a latching member pivoted to one end of said sash lift having a first portion extending through said socket and a second portion integral with

the first portion and at right angles thereto and extending through said slot in a direction parallel to the front surface of said support, and a stop pin extending across said slot between the spaced walls thereof and at a substantial distance greater than the transverse dimension of the latching member from the third wall thereof and serving with said third wall to limit the transverse movement of said second portion of the latching member.

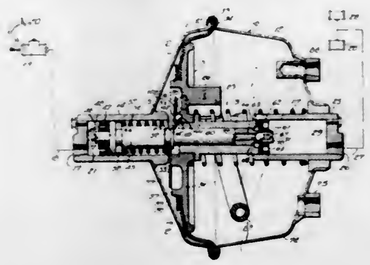
2,448,978
MIXTURE OF HYDROLYZED ETHYLENE-VINYL ESTER COPOLYMER AND N-SUBSTITUTED POLYAMIDE
Fred Wayne Hoover, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 14, 1944, Serial No. 568,195
12 Claims. (Cl. 260—45.2)

1. A composition of matter which on heating is rendered insoluble in organic solvents, said composition consisting of a homogeneous blend comprising an intimate mixture of an N-substituted polyamide and a hydrolyzed ethylene/vinyl ester copolymer in which the vinyl ester is that of a saturated primary monocarboxylic acid, said hydrolyzed copolymer having hydroxyl groups on from 5% to 45% of the carbon atoms in the copolymer chain, said N-substituted polyamide and hydrolyzed copolymer being present in the proportion by weight of from 1:200 parts of the N-substituted polyamide to 200:1 parts of said copolymer, said N-substituted polyamide being a synthetic polymeric linear polycarbonamide of intrinsic viscosity of at least 0.4 which contains amide groups as an integral part of the polymer chain, and in which at least 5% of said amide groups have been converted to groups of the formula



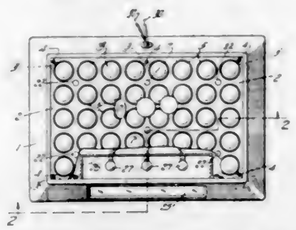
wherein R is the radical of a monohydric alcohol from which a hydroxyl has been removed, the average number of carbon atoms in the segments of the chain separating the amide groups in said N-substituted polyamide being at least two.

2,448,979
PROCESS FOR THE PRODUCTION OF β,β'-DICYANO DIETHYL ETHER
Heinrich Hopff and Wilhelm Rapp, Ludwigshafen-on-Rhine, Germany; vested in the Attorney General of the United States
No Drawing. Application May 23, 1941, Serial No. 394,840. In Germany June 19, 1940
7 Claims. (Cl. 260—465.6)



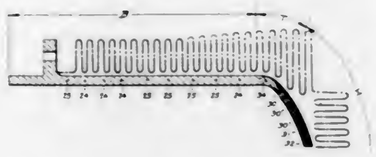
7. Process which comprises reacting two mols of acrylonitrile with one mol of water in the presence of an alkaline catalyst.

2,448,980
STEM AND SOCKET COMBINATION
Richard Leighton Hough, Brantford, Ontario, Canada
Application October 1, 1945, Serial No. 619,551
6 Claims. (Cl. 16—38)



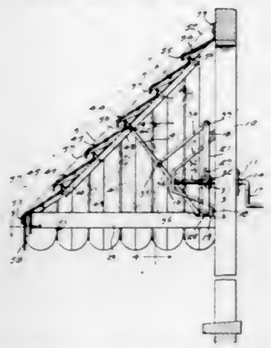
1. For use with a stem having a lug extending from its side, a socket having staggered rows of raised portions on its inner surface extending around the inside of the socket and forming spiral and annular channels therebetween for the passage of the lug.

2,448,981
BOOSTER BRAKE MECHANISM
Jeannot G. Ingres, Richmond, Va., assignor to Empire Electric Brake Company, Newark, N. J., a corporation of New Jersey
Application April 25, 1945, Serial No. 590,233
12 Claims. (Cl. 121—41)



1. A fluid pressure motor comprising a casing having a pressure responsive unit therein, a pair of valves carried by said unit and operable for controlling pressures in said casing, and a plate mounted for bodily movement with said unit and forming an operating lever for said valves, said plate being mounted to rock successively on two axes in its own plane to successively operate said valves to energize said motor.

2,448,982
COIN TRAY
Theodore E. Jensen, Albany, N. Y.
Application April 2, 1946, Serial No. 659,052
8 Claims. (Cl. 177—346)



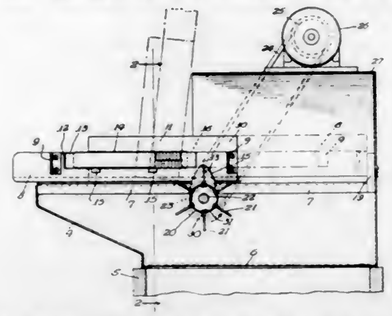
3. A coin tray comprising a casing having a top of electrical conducting material forming the bottom of said tray and provided with a multiplicity of spaced openings therein, depressible buttons formed of electrical conducting material mounted in said openings and projecting substantially above the bottom of said tray, means in said casing comprising comparatively light, easily yielding springs normally holding said buttons projecting above the bottom of said tray, means electrically insulating said tray bottom from said buttons, means electrically connecting said buttons together, and means, including an electrically actuated signal, adapted to be connected to a source of power to form a closed electric circuit when said tray bottom and any of said buttons are electrically connected; the spaces between said buttons being substantial but somewhat less than the diameter of the smallest coin expected to be deposited on said tray; whereby a coin deposited on said tray will be partially supported on the bottom of said tray and partially supported on at least one of said buttons and will electrically connect said button and the bottom of said tray.

2,448,983
ENGINE CYLINDER
Halex Johnson, Jackson Heights, N. Y., assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y., a corporation of Maryland
Application May 2, 1944, Serial No. 533,685
6 Claims. (Cl. 309—2)

2. As an article of manufacture, a one-piece internal combustion engine cylinder part formed of metal, having a substantially uniform chemical composition throughout and comprising a straight-sided tubular barrel portion having substantially the physical characteristics of cast steel, a dome-shaped head portion having substantially the physical characteristics of wrought steel, and an intermediate portion between said barrel and head portions having physical characteristics changing progressively from substantially cast steel adjacent said barrel portion to substantially wrought steel adjacent to said head portion.

2,448,984
AWNING
Edmund Kraus, San Antonio, Tex.
Application May 16, 1945, Serial No. 594,012
5 Claims. (Cl. 20—57.5)

1. In an awning structure having a plurality of intermediately pivoted louvres and a transverse beam pivotally connected to one end of said louvres, actuating means for rocking said louvres, said means comprising an actuating handle having a threaded shank extending through the wall of a building, a support on the outward side of said wall for the support of the outer end of said threaded shank, an arm pivoted at its lower end to said support, cooperating means carried by said shank and said arm for rocking said arm on rotation of said shank, a pivot member pivotally connected at the lower end to said support, a link connecting the upper end of said arm to the upper end of said member, and a forked member pivotally connected at its lower end to said pivot member and pivotally connected at its upper end to said transverse beam intermediate the length thereof.



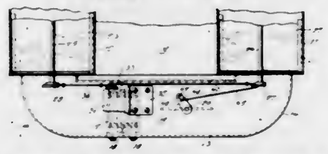
2,448,985
MANUFACTURE OF ABRASIVE PRODUCTS
Joseph N. Kuzmick, Clifton, and De Witt Bell, Fair Lawn, N. J., assignors to Raybestos-Manhattan, Inc., Passaic, N. J., a corporation of New Jersey
No Drawing. Application August 7, 1943, Serial No. 497,851
6 Claims. (Cl. 51—298)

1. The method of making an abrasive product bonded with a phenol-aldehyde synthetic resin modified by a rubber-like synthetic, which consists in making a bond by mixing a phenol-aldehyde resin component in the liquid state with a rubber-like synthetic selected from the group consisting of a partially polymerized chloroprene and a copolymer of butadiene and acrylic-acid nitrile, the rubber-like synthetic being dissolved and swelled by the liquid resin and the rubber-like synthetic acting to modify the bond characteristics of the resin, in mixing said bond with abrasive grains and in then shaping and curing the mix.

2,448,986
COMB DECAPPER
Walter C. Ladwig, Elmhurst, Ill.
Application September 14, 1944, Serial No. 554,133
8 Claims. (Cl. 6—12)

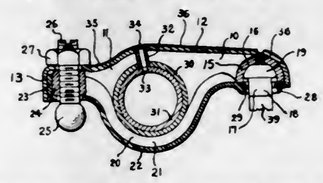
1. A honeycomb decapper comprising a rotatable member with blunt teeth spaced apart and

staggered, a carriage movable over the member, means for loosely supporting a honeycomb frame in the carriage, and projecting means at the



ends of the member for engaging the crosspiece of a frame to lift it in the carriage out of the path of the teeth.

2,448,987
SYNTHETIC DRYING OILS FROM A DITHIOL AND DIVINYLACETYLENE
Carl M. Langkammerer, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 29, 1944, Serial No. 556,487
12 Claims. (Cl. 260—79)



1. A process for preparing a film-forming, air-drying polymeric thio ether which comprises heating at a temperature of from 60° C. to 105° C. reactants comprising one mole of a dithiol and from 0.8 to 1.2 moles of divinylacetylene in the presence of a catalyst and in the presence of a cosolvent for the catalyst and reactants until the dithiol is essentially all combined with the divinylacetylene and until the reaction product has a viscosity of at least one poise at 25° C., and stopping the reaction before gelation takes place, said catalyst being selected from the group consisting of alkali metal hydroxides and alkali metal hydrosulfides.

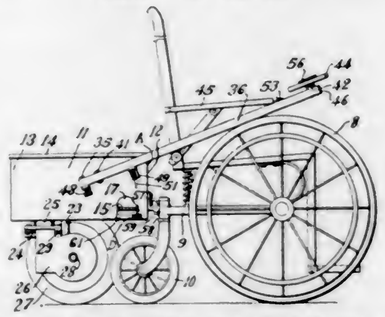
2,448,988
HEATING SYSTEM
Julius La Raus, Westport, Conn.
Application December 13, 1945, Serial No. 634,840
3 Claims. (Cl. 237—2)

3. A hot air system for the heating of space and domestic hot water, comprising a furnace provided with a burner, and air supply and air return chambers, ducts leading from such chambers for the space heating, dampers in each of said ducts arranged to close the same, and a by-pass duct connecting such chambers, coils for the heating of the domestic hot water within the by-pass duct, a damper arranged to close the by-pass duct, damper closing means arranged to completely close the air supply and return ducts and open the by-pass duct when in one position, and to open the former ducts and substantially close the latter duct when in another position, a thermostat responsive to the temperature in the space to be heated and an Aquastat responsive to the temperature of the domestic hot water, and a circuit controlling operation of the burner and the damper closing means and including the thermostat and the Aquastat, the thermostat being arranged to start burner operation and open the air supply and return duct dampers while closing the by-pass damper, the Aquastat being arranged to close the former dampers and open the latter when the space heating requirements have been satisfied and the domestic water calls for heat.

2,448,989
ENGINE ROCKER ARM
James M. Leake, Monroe, Mich.
Application February 18, 1946, Serial No. 648,327
7 Claims. (Cl. 74—519)

1. An engine rocker arm comprising a central bearing support, an arm member extending in substantially opposite directions therefrom, said arm member comprising an upper inverted U-shaped stamping and a lower U-shaped stamping said upper and lower stampings being telescoped and fused together to form a box section construction, an internally threaded member secured between the side walls of said lower U-shaped stamping at one end thereof, a contacting bearing adjustably secured in said internally threaded member, a concave portion provided in the under side at one end of said upper inverted U-shaped member, a concavo-convex bearing member secured in said concave portion, and a self-aligning contacting bearing swivelably secured in said concavo-convex bearing member.

2,448,990
MATCH PACKAGE
Arthur O. Levine, Brooklyn, N. Y.
Application May 22, 1946, Serial No. 671,510
2 Claims. (Cl. 46—11)

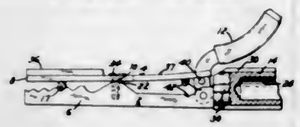


1. An article of manufacture of the class described comprising a match strip consisting of a plurality of match stems carried by a match book having a flap, said flap having a pictorial display of a figure upon one face thereof, said flap having apertures formed therein at selected locations relative to the pictorial illustration, and said match stems being extended through the apertures in diverging relation with their match heads protruding outwardly to complete the pictorial illustration on the flap to simulate limbs of said figure and to limit the outward swing of the flap relative to the book.

2,448,991
PRODUCTION OF N-ISOPROPYL-METHACRYLAMIDE
Joy G. Lichty, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application November 27, 1944, Serial No. 565,417
1 Claim. (Cl. 260—561)

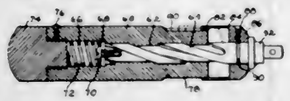
A method of preparing N-isopropyl-methacrylamide which comprises mixing isopropyl alcohol with methacrylonitrile at an elevated temperature in the presence of an acid catalyst.

2,448,992
PROPELLING POWER UNIT FOR INVALID WHEEL CHAIRS
Homer Love, Cecil E. Britain, Bowen D. Langton, and Ralph E. Van Gundy, Wichita, and Charlie E. Van Gundy, Valley Center, Kans.
Application June 16, 1947, Serial No. 754,970
1 Claim. (Cl. 180—23)



In a propelling power unit for a wheel chair comprising one wheel and housing for the same, means to connect the housing rockably to a conventional wheel chair without disconnecting any parts of the wheel chair, a motor and gear means to drive the wheel, hinge means to rockably attach the wheel to the housing centrally thereof, a sprocket wheel mounted on the rockable portion of the hinge means to turn the wheel on its diametrical axis to guide the wheel chair, an arm adjustable secured to the housing and extending forwardly to terminate adjacent the side of the wheel chair, a sprocket wheel rotatably mounted in the forward end of the arm, a steering wheel to affect rotation of last said sprocket wheel, chains engaging over their respective sprocket wheels, cables to connect the chains with each other for imparting rotation of the steering wheel to the hinge means, switches mounted on the forward end of the arm and electric wiring to connect the batteries and motor for reversed and forward motion of the chair, and struts for the housing to retain the housing upright when disconnected from the wheel chair.

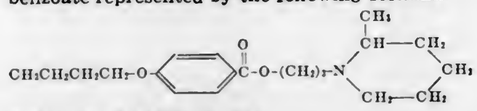
2,448,993
GRAIN REFINING MAGNESIUM ALLOYS
Charles H. Mahoney, Harley C. Lee, Allan L. Tarr, and Pierre E. Le Grand, Boulder City, Nev., assignors, by mesne assignments, to Reconstruction Finance Corporation, a corporation of the United States
No Drawing. Application August 26, 1944, Serial No. 551,422
7 Claims. (Cl. 75—67)



1. The method of producing magnesium base alloys of fine grain structure which comprises melting a magnesium base alloy and subjecting the molten alloy to the action of finely divided carbon.

2,448,994
WELDING ROD HOLDER
Archie W. McClary, Oakland, Calif.
Application June 28, 1946, Serial No. 679,935
5 Claims. (Cl. 219—8)

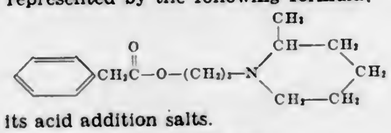
1. An electrode holder comprising a working arm terminating at one end in an electrode-engageable jaw, a flexible resilient working arm disposed with one end thereof facing said electrode-engageable jaw and constituting an opposing jaw for said holder, means for fulcruming said flexible resilient working arm at an intermediate point thereof to said first working arm to permit rocking of said flexible resilient working arm thereon, and means for flexing said flexible resilient working arm against an electrode disposed between said jaws, said flexing means including a lever pivoted at a point spaced from said flexible resilient working arm and extending toward and beyond the same, and means on said lever intermediate its pivot axis and said flexible resilient working arm adapted to engage said flexible resilient working arm in the course of movement of said lever about its pivot axis, said flexible resilient arm being sufficiently flexible to permit movement of said engaging means to a position beyond dead center.



2,448,995
IMPACT SCREW DRIVER
Jesse C. McCorkhill, Xenia, Ohio
Application August 9, 1944, Serial No. 548,729
1 Claim. (Cl. 145—53)

In a device for actuating a screw member or other turnable fastening means, the combination including a tubular member having an internal bore provided with spiral grooves, said bore terminating in an enlarged portion terminating in a threaded portion, a spindle member provided with spiral portions seated in the spiral grooves of the tubular member, means fixedly attached to the spindle member and including a washer seated in the enlarged portion of the cylindrical bore, a hammer-engaging capping member threadedly engaging the threads of the tubular member, a compression spring positioned between the capping member and the washer for urging the spindle member into extended position, the spindle member projecting beyond the tubular member, the portion of the spindle member projecting beyond the tubular member being provided with an annular groove, a ferrule terminating in a tubular flange rotatably mounted on the spindle member near the end of the spindle member, the flange telescopically engaging the tubular member, means for preventing rotation of the ferrule relative to said tubular member, means extending from the ferrule into the annular groove for preventing longitudinal movement of the spindle member with respect to the ferrule without rotation thereof, and a collar fixedly attached to the spindle member beyond the ferrule, the tubular member cooperating with the spindle to translate longitudinal impacts by a hammer applied to the capping member into rotary impulses applied to the screw member or other fastening means.

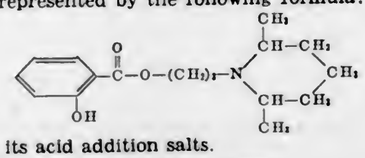
2,448,996
3 - (2' - METHYL PIPERIDINO) - PROPYL-p-n BUTOXY BENZOATE AND ACID ADDITION SALTS THEREOF
Samuel M. McElvain, Madison, Wis., and Thomas P. Carney, Indianapolis, Ind.
No Drawing. Application June 30, 1945, Serial No. 602,655
2 Claims. (Cl. 260—294)



1. 3-(2'-methylpiperidino)-propyl p-n-butoxybenzoate represented by the following formula

and its acid addition salts.

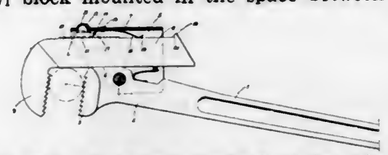
2,448,997
PIPERIDINE PROPANOL ESTERS OF PHENYLACETIC ACID
Samuel M. McElvain, Madison, Wis., and Thomas P. Carney, Indianapolis, Ind.
No Drawing. Application June 30, 1945, Serial No. 602,656
2 Claims. (Cl. 260—294)



1. 3-(2'-methylpiperidino)-propyl phenylacetate represented by the following formula:

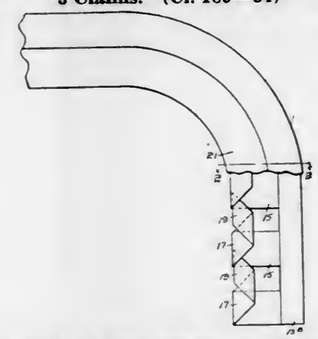
and its acid addition salts.

2,448,998
3 - (2',6' - DIMETHYLPIPERIDINO) - PROPYL SALICYLATE AND ACID ADDITION SALTS THEREOF
Samuel M. McElvain, Madison, Wis., and Thomas P. Carney, Indianapolis, Ind.
No Drawing. Application June 30, 1945, Serial No. 602,658
2 Claims. (Cl. 260—294)



1. 3-(2',6'-dimethylpiperidino)-propyl salicylate represented by the following formula:

and its acid addition salts.

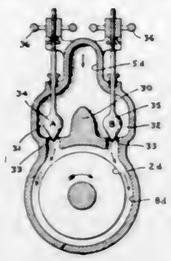


2,448,999
PIPE WRENCH HAVING A PIVOTED YOKE CARRYING AN ADJUSTABLE JAW
Lawrence C. Mead, Turlock, Calif.
Application June 12, 1944, Serial No. 539,804
3 Claims. (Cl. 81—103)

1. A wrench comprising a handle, a fixed jaw on one end of the handle, a yoke pivoted on the handle adjacent the fixed jaw, a shank slidable in the yoke, a jaw depending from the outer end of the shank and adapted to cooperate with the fixed jaw, the back of the shank being spaced from the back of the yoke and provided with a row of teeth, the back of the yoke being provided with a semi-spherical cavity in its inner face to provide a seat for a pawl block head, a pawl block mounted in the space between the

back of the shank and the back of the yoke and provided with a row of teeth for engagement with the teeth on the back of the shank, a semi-spherical head on the block seated in the cavity in the back of the yoke, and a spring fixed on the inner surface of the back of the yoke and engaging the end of the block to hold the head in frictional engagement with the walls of said cavity.

2,449,000
CORE FOR CLOSURE FRAME TRIM ELEMENTS
Oliver B. Merrill, Amesbury, Mass.
Application December 11, 1946, Serial No. 715,365
3 Claims. (Cl. 189—34)



1. A core for a trim element which is mounted on a closure frame and adapted to cooperate with a portion of the closure for the frame, which core comprises an elongated strip of material of substantial width lying substantially in a plane but capable of being bent curvilinearly in that plane, the strip formed of sheet material and comprising a substantially continuous portion along one side from which projects a series of independent spaced tongues having terminal extensions of generally rhomboidal shape which are bent and reversely rebent between the ends and along their proximal ends respectively, the distal portion of each overlapping an adjacent tongue of the series and extending beneath the proximal bent over portion of the extension of said adjacent tongue on the opposite side from the similarly bent over distal portion of that extension.

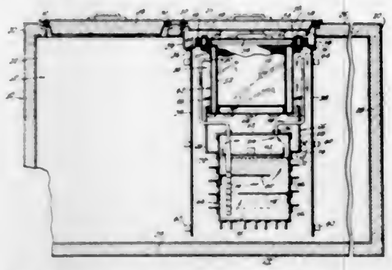
2,449,001
PRODUCTION OF 1,3-DIOLS
Louis A. Mikeska and Erving Arundale, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 27, 1944, Serial No. 537,739
8 Claims. (Cl. 260—635)

1. A method for producing 1,3-diols which comprises reacting an olefin with an aldehyde at

elevated temperatures and pressures in the presence of sulfuric acid from .01 to 5% concentration, the weight of the water present in said sulfuric acid being at least 3 times the weight of the aldehyde charged.

2,449,002
APPARATUS FOR REGULATING CENTRIFUGAL MACHINES
Lewis F. Moody, Princeton, N. J.
Application August 30, 1946, Serial No. 693,995
1 Claim. (Cl. 103—97)

In a multi-stage centrifugal pump for handling liquids subject to cavitation, the combination of a housing, a plurality of rotary stage impellers in said housing, said housing having suction and discharge passages connecting in fluid communication the discharge of the individual stages with the suction of the other stages, said housing having a first suction passage for the first stage impeller, said suction passages except the first having needle valve seats therein, said seats being disposed so that fluid flowing therethrough is tangential to the impeller, needle valves cooperating with the seats to vary the effective cross section thereof, and means outside of the housing and connected to the valves for regulating the movements of the valves.

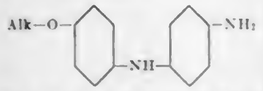


2,449,003
WATER-SOLUBLE ESTERS OF RIBOFLAVIN AND PREPARATION OF SAME
Anthony M. Moos, New York, and Sidney D. Upham, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 9, 1945, Serial No. 587,434
12 Claims. (Cl. 260—211)

1. A method of preparing polycarboxylic acid esters of riboflavin which comprises heating riboflavin and a polycarboxylic acid in phenol at a temperature within the range of 100° to 185° C.

2,449,004
PREPARATION OF SUBSTITUTED STYRENES
Charles E. Morrell, Westfield, and Ober C. Slotterbeck, Rahway, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,744
12 Claims. (Cl. 260—669)

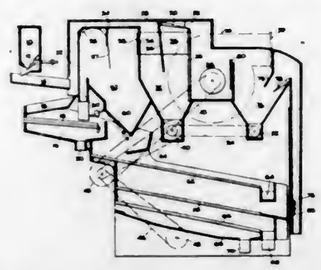
1. The method of producing an alpha methyl styrene which comprises contacting a mixture of an isopropyl benzene and steam with a dehydrogenation catalyst under dehydrogenating conditions of temperature and pressure the said catalyst consisting essentially of a major portion of magnesium oxide, a minor portion of iron oxide, a minor portion of copper oxide, and a minor portion of potassium oxide.



2,449,005
SHIPPING CONTAINER REFRIGERATED BY DRY ICE
Andrew J. Nicholas, North Haven, Conn., assignor to The Grenby Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application May 23, 1946, Serial No. 671,864
11 Claims. (Cl. 62—91.5)

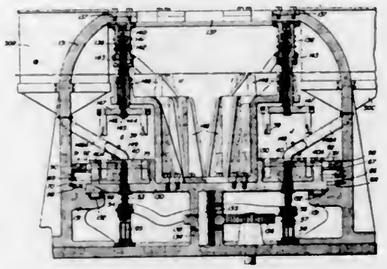
1. In a refrigerator having a load-carrying compartment for storage of articles in a refrigerated gaseous atmosphere, a substantially gas-tight container for solidied CO_2 located within said compartment, a container having a secondary refrigerant therein located within said compartment substantially out of direct heat-exchanging relationship with solidified CO_2 in said first-named container, means to conduct evaporated gaseous CO_2 from said first-named container into heat-exchanging relationship with said secondary refrigerant, and means for continuously discharging said gaseous CO_2 after heat-exchange with said secondary refrigerant into an upper region of said refrigerated compartment whereby to cause forced circulation of the atmosphere in said compartment.

2,449,006
ALKENOXY AMINO DIPHENYLAMINES
Robert P. Parker, Somerville, and John J. Denton, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 3, 1944, Serial No. 543,434
8 Claims. (Cl. 260—571)



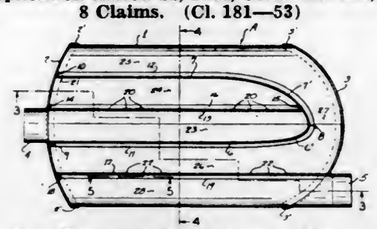
1. Chemical compounds represented by the formula

in which Alk is a radical selected from the group consisting of allyl, methallyl and beta-chloroallyl radicals.



2,449,007
METHOD AND APPARATUS FOR SEPARATING PEANUTS FROM DEBRIS
Frederick J. Paul, Fredonia, N. Y., assignor to Huntley Manufacturing Company, Brocton, N. Y.
Application November 2, 1944, Serial No. 561,574
6 Claims. (Cl. 202—19)

5. An apparatus for sizing and cleaning nut produce from field debris, said apparatus comprising in combination pneumatic draft means for initially separating relatively light weight debris from said produce, means for gravity segregating the produce from the relatively heavy weight debris, pneumatic draft means for lifting



the segregated produce from the heavy debris, means for sizing said lifted produce, pneumatic draft means for finally segregating light weight debris from the sized produce, and means for selectively regulating the effective draft intensities of the pneumatically segregating processes.

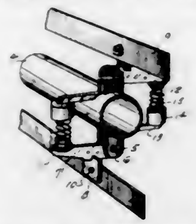
2,449,008
MEANS FOR FORMING PRESSED ARTICLES FROM POWDERS
Joseph S. Pecker and Henry A. Simpson, Philadelphia, Pa.; said Simpson assignor to said Pecker
Original application October 18, 1940, Serial No. 361,656. Divided and this application December 27, 1943, Serial No. 515,790
10 Claims. (Cl. 18—20)

6. In a machine of the character described, an intermittently rotatable head, cavity dies carried thereby, fixed bearing members forming supports for the head, means for intermittently rotating the head, hoppers and means for supporting the same above said head, the latter having communication with the dies during the dwells of the rotatable head, punches supported above the dies and positioned to register therewith during the dwells, means for reciprocating the punches during the dwells of the head, die plungers carried by the head and means for causing said plungers to reciprocate within the dies, fixed cams, the same being positioned so as to impart motion to the die plungers during the moving of the head, mandrels spaced from said plungers and located within each die, fixed cams for operating the mandrels for causing said mandrels to enter and withdraw from each die during the moving of the head.

2,449,009
MUFFLER
Carl Peters, St. Louis, Mo.
Application March 11, 1946, Serial No. 653,661
8 Claims. (Cl. 181—53)

1. A muffler comprising an outer housing, and a plurality of partitions arranged within said outer housing which divide the interior of the muffler into a plurality of communicating passageways through which gases and sound waves accompanying said gases pass, there being a centrally located passageway which receives gases and sound waves entering the muffler, opposed intermediate passageways at opposite sides of said centrally located passageway, opposed outer passageways located outwardly of said intermediate passageways from one of which gases are discharged from the muffler, and a connecting passageway which connects said outer passageways, the partition located between said centrally located passageway and one of said intermediate passageways, and the partition between the other of said intermediate passageways and the other passageway from which gases are discharged from the muffler each having a multiplicity of apertures formed therethrough which are distributed over a substantial surface portion thereof and through which gases and accompanying sound waves pass, and the partition between the other of said outer passageways and the adjacent intermediate passageway having apertures formed therethrough only adjacent to an end thereof, the arrangement and relation of said passageways and the disposition of the apertures of said apertured partitions being such that the direction of travel of gases and sound waves passing through the muffler is repeatedly reversed.

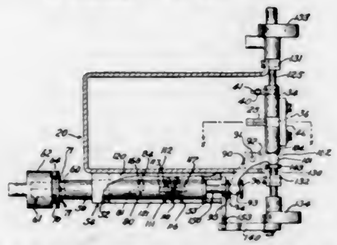
2,449,010
METHOD OF STABILIZING HYDROCARBONS
Richard F. Robey, Cranford, John Fedirko, Elizabeth, and Allan E. Barnett, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 3, 1947, Serial No. 789,574
8 Claims. (Cl. 260—666.5)



1. A composition containing a hydrocarbon susceptible to peroxide formation and dissolved therein a small amount of a phenolic type antioxidant with a small amount of a compound of a metal having a standard oxidation potential between 0 and —0.7.

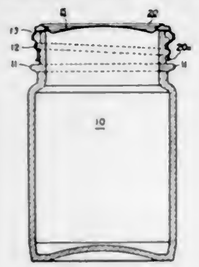
2,449,011
METHOD FOR PRODUCING ACYLAMINO DIANTHRIMIDE ACRIDONES
Mario Scalera, Somerville, and Asa W. Joyce, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 1, 1944, Serial No. 538,346
2 Claims. (Cl. 260—276)

2. A method of preparing a mono alpha acylamino dianthrimide acridone which comprises



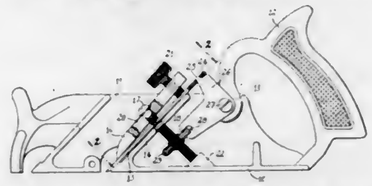
subjecting an orthocarboxy alpha monoacylamino dianthrimide to ring closure in the presence of benzoyl chloride in an organic solvent and a minor amount of sulfuric acid with respect to the dianthrimide.

2,449,012
PIPE EXCHANGER SCRAPER
Thomas E. Schley, Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application July 19, 1945, Serial No. 605,975
3 Claims. (Cl. 257—102)



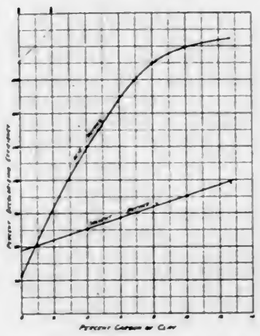
3. A wall scraper assembly for removing deposits from the interior wall of the interior pipe of a double pipe heat exchanger and the like, comprising a centrally located, axially extending scraper shaft and a plurality of axially extending scraper blades carried thereby, each blade being supported by a plurality of mounting means, each mounting comprising a pivot support affixed to said shaft; a generally T-shaped rocker arm having one T arm end pivotally mounted in said pivot support with the other T arm end extending as a lever in a direction generally at right angles to a line drawn through the shaft center and pivot center, the shank of the T extending toward the pipe wall along a line generally parallel to said center line, means for affixing the blade to the shank of the T-shaped rocker arm, and spring retaining means upon the lever extremity of said T-shaped rocker arm; a spring support affixed to said shaft and extending therefrom in alignment with the lever extremity of said T-shaped rocker arm, spring retaining means upon the extremity of said spring support; and a compression spring mounted between the two said spring retainers and acting to rotate the rocker arm about its pivot and to force the scraper blade into engagement with the interior pipe wall.

2,449,013
CIRCUIT BREAKER-HOLD-IN MECHANISM
William M. Scott, Jr., Bryn Mawr, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 29, 1943, Serial No. 504,285
18 Claims. (Cl. 200—109)



1. In a circuit breaker having a pair of cooperable contacts; means responsive to predetermined circuit conditions for effecting disengagement of said contacts; an axially movable member and a manually operable rotatable member rotatable from a neutral to an operating position and connected to said axially movable member, said axially movable member on moving to one of its positions locking said contacts against disengagement, said manually operable member on being manually released automatically returning to its neutral position.

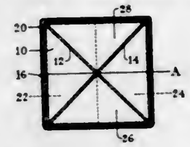
2,449,014
CONTAINER CLOSURE
Stewart Shaffer, Muncie, Ind., assignor to Ball Brothers Company, a corporation of Indiana
Application June 13, 1946, Serial No. 676,447
9 Claims. (Cl. 215—56)



9. A closure for an opening in a container comprising, a lid of flexible metal construction, said lid having a substantially continuous rim portion thereabout constructed and arranged to rest upon and closely abut a lip edge of the container opening, said lip being provided with spaced-apart depending portions on opposite sides and about the continuous rim portion thereof and located in a spaced relationship with respect to opposite sides of the lip edge of the container, said retainer element being constructed and arranged to receive said lid therein, said retainer element having a side skirt portion constructed and arranged to adjustably engage the container adjacent the opening therein for tightening said retainer element down on the container, said retainer element having a transverse rim portion connected to the side portion thereof and projecting toward the opening of the container, the side portion of said retainer element adjacent the transverse rim portion thereof having a spaced-apart relationship with respect to an outer peripheral edge of said lid when said lid and retainer element are in a mounted relationship with respect to the container, the transverse rim portion of said retainer element having a substantially continuous ridge portion located substantially centrally thereof for imparting flexibility thereto, the transverse rim portion of said retainer element having a rim-engaging flange portion that extends inwardly and thereunder to provide a bead, said bead being in a spaced-apart flexible relationship with respect to the transverse rim portion such that the latter has a spaced-apart relationship with respect to said lid, and said bead being constructed and arranged to engage said lid entirely inside and adjacent to a longitudinal plane of an inner side wall of the lip edge of the container opening, and the whole being constructed and arranged in such a manner that said lid is free to tilt between the flange portion of said retainer element and the lip edge of the container when said retainer element is tightened down on the container.

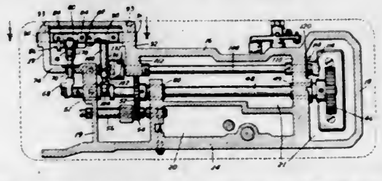
2,449,015
RABBET PLANE
Herbert G. Shaw, Derby, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application September 7, 1945, Serial No. 614,867
7 Claims. (Cl. 145—13)

3. A plane comprising a body, a frog, a blade, and a clamp plate, a screw securing said plate to the frog and projecting through the latter, a nut threadedly mounted on said screw, means connecting the nut with the blade to adjust the position of the latter longitudinally of the frog upon rotation of the nut, and a handle, said connecting means comprising a bell crank lever pivoted on the handle.



2,449,016
ACTIVATION OF PETROLEUM ADSORBENTS
Thomas P. Simpson, John W. Payne, and Peter D. Valas, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application December 11, 1943, Serial No. 513,936
1 Claim. (Cl. 196—147)

In a method of treating acid refined petroleum oils, the improvement which comprises treating said acid refined oils with a finely divided porous adsorptive clay-type inorganic material carrying an outer layer deposit of not less than 2½% of activated carbon resulting from the incomplete combustion and removal of petroleum oil.

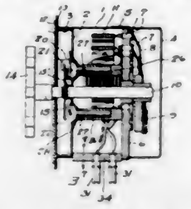


2,449,017
HASSOCK
Jacob M. Smiler, Philadelphia, Pa.
Application February 13, 1946, Serial No. 647,324
1 Claim. (Cl. 155—169)

A hassock comprising a hollow corrugated casing open at its top, a covering of soft pliable material on the outside of said casing, a covering of leatherlike material on the outside of said soft pliable material, a plurality of interlocking filler sheets of heavy cardboard within said casing and extending to a short distance of the top of the casing, a hollow support within said casing and mounted above said filler sheets, a cushion mounted within said support and being located within

said casing, and a covering for the cushion, the top of said cushion being positioned on substantially the same level as the top of the casing.

2,449,018
SEWING MACHINE
Clarence C. Smith, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application September 7, 1946, Serial No. 695,487
6 Claims. (Cl. 112—215)

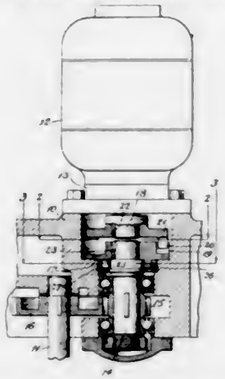


1. In a sewing machine a frame, a feed-dog, an operating shaft, a feed-rocker for imparting movement to said feed-dog, an eccentric on said operating shaft, a pitman connecting said eccentric with said feed-rocker, said pitman including telescoping members having a free-sliding connection one with the other and one of said telescoping members being freely pivoted to said feed-rocker, a slotted guiding member, a regulating shaft rotatably mounted in said frame and having said slotted guiding member secured thereto in a position wherein the longitudinal axis of the slot in said slotted guiding member extends transversely of the longitudinal axis of said regulating shaft, a block freely pivoted on said one of said telescoping members and having at least two parallel sides extending into the slot in said slotted guiding member for sliding motion longitudinally of said slot as an incident to swinging of said telescopic pitman to impart endwise motion to said one member of said telescopic pitman and thereby to impart an oscillating motion to said feed-rocker to variable extents dependent upon the angular relationship between the longitudinal axis of the slot in said slotted guiding member and the longitudinal axis of said telescopic pitman, a lever secured to said regulating shaft, and means including an adjustable abutment carried by said frame for holding said lever in fixed but adjustable positions to regulate the extent of oscillating motion imparted to said feed-rocker.

2,449,019
ATTENUATOR
John P. Smith, Jr., Verona, N. J., assignor to Daven Company, Newark, N. J., a corporation of New Jersey
Application November 11, 1944, Serial No. 562,989
4 Claims. (Cl. 201—48)

1. In an attenuator, a housing, a closure head rigidly connected to one end thereof, a removable

closure cap over the other end of the housing, electrical current resistance means within said housing, said housing provided with a slot cut therein, a terminal plate having terminals thereon connected to said resistance means, said terminal plate having grooves in its edges which slidably receive the edge portions of said housing along said slot, a contact carrying plate in said



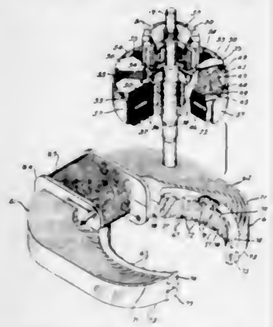
housing, said contact plate and said rigidly connected head engaging said terminal plate to hold it against sliding movement, a shaft extending axially through said closure plate, into said housing and through said contact plate, a detent gear on said shaft outwardly of said closure plate, and means formed on said detent gear and engaging said closure plate to limit the degree of insertion of the shaft into the housing.

2,449,020

POWER DRIVE

Louis Spraragen, Bridgeport, Conn., assignor to Automatic Locking Devices, Incorporated, Bridgeport, Conn., a corporation of Connecticut

Application June 14, 1943, Serial No. 490,769
2 Claims. (Cl. 192—8)



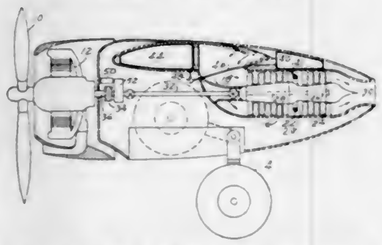
1. A power drive comprising a motor having a drive shaft; a driven shaft to perform work; a power transmitting shaft between the motor drive shaft and the driven shaft; a self-acting brake acting on the transmitting shaft to lock the same comprising a fixed hollow brake drum, a cam member secured to the transmitting shaft, interponents between the interior wall of the brake drum and the cam member, resilient means adapted to wedge the interponents between the said wall of the brake drum and the cam member to stop the transmitting shaft and lock the same against continued turning, the wedging action of the interponents increasing upon increasing torque being applied to the driven shaft; rotatable unlocking means movable relative to the transmitting shaft for moving said interponents against the force of said resilient means to render said interponents inoperative when power is being transmitted therethrough; and means connecting the motor with the transmitting shaft and including means for moving the unlocking means continuously in advance of said transmitting shaft to unlock the latter and maintain it unlocked while power is being transmitted through said drive and allowing retrograde movement of the unlocking means with resulting locking of the transmitting shaft when the torque applied by the motor becomes less than the torque applied by the resilient means.

2,449,021

DYNAMOELECTRIC MACHINE

Maurice D. Stahl, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application June 8, 1942, Serial No. 446,174
5 Claims. (Cl. 172—36)



1. A dynamo-electric machine, comprising an armature, and a laminated field core having ends thereof forming pole faces, and spaced means each having opposed recesses and projections to anchor said ends of said laminations and to space the latter in predetermined relation with respect to each other at said pole faces.

2,449,022

FUEL SYSTEM FOR AIRCRAFT POWER PLANTS FOR AIRCRAFT PROPULSION AND BOUNDARY LAYER AIR CONTROL

Edward A. Stalker, Bay City, Mich.

Application March 12, 1945, Serial No. 582,394
1 Claim. (Cl. 244—40)

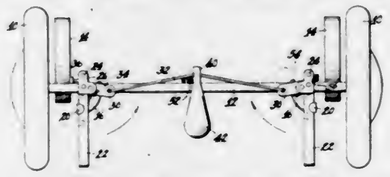
In an aircraft adapted for operation with boundary layer control and having a source of propulsive power for propelling the aircraft in normal flight, the combination of a wing having a slot in its surface leading into the wing interior, a main fuel tank for supplying fuel directly to said propulsive power source, means communicating with said slot for inducting the boundary layer air on said wing surface provided for operation of the aircraft with boundary layer control including a second power source for operating said inducting means, a separate auxiliary fuel tank, means continuously communicating between said main tank and said auxiliary tank for supplying said auxiliary tank from said main tank, means for supplying fuel from said auxiliary fuel tank directly to said second power source, and means preventing return flow of fuel from said auxiliary tank to said main tank to assure the presence of fuel in said auxiliary tank notwithstanding depletion of fuel in said main fuel tank for the operation of said second power source to enable the operation of the aircraft with boundary layer control.

2,449,023

AUSTENITIC ALLOY STEELS

Alfred Everett Thornton, Sheffield, England, assignor to Thos. Firth & John Brown Limited, Sheffield, England, a British company

No Drawing. Application July 2, 1946, Serial No. 681,135. In Great Britain July 9, 1945
8 Claims. (Cl. 148—31)



1. A high expansion austenitic steel suitable for use in the manufacture of internal-combustion engines and containing carbon between 0.35% and the usual upper limits of carbon in austenitic steels, manganese from 3.5 to 6%, chromium from 3 to 7%, nickel from 9 to 16%, copper from 0.5 to 12%, silicon 0 to 2.0%, a small proportion of a carbide forming element taken from the group consisting of vanadium, tungsten, titanium and columbium, the remainder being substantially all iron and the steel having been normalized at a minimum of 700° C. to obtain optimum physical properties.

2,449,024

SAFETY STAND

William C. Troendle, Gardner, Mass., assignor to Thayer Company, Gardner, Mass., a corporation of Massachusetts

Application January 25, 1947, Serial No. 724,448
10 Claims. (Cl. 188—20)

1. In a device of the class described, an axle, a pair of wheels on the axle, a safety stand element pivotally mounted on an axis transverse of the axle, a treadle, a lever operatively connected with the treadle and element to pivot the latter in one direction upon depression of the treadle, and a second treadle connected to said lever to pivot the latter and said element in the opposite direction, said treadles being relatively widely spaced and the lever extending between the treadles.

2,449,025

RUST-INHIBITING LUBRICANT

William R. Turner, Drexel Hill, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application July 21, 1943, Serial No. 495,793
4 Claims. (Cl. 252—33)

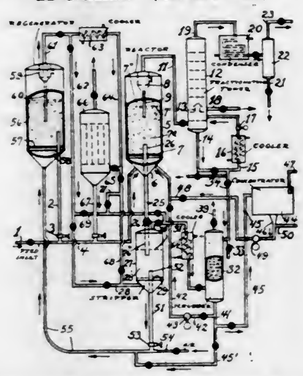
1. A rust-inhibiting lubricant comprising hydrocarbon lubricating oil, 0.25% to 3% of an alkaline earth metal petroleum sulfonate, and 0.01% to 3% of a pure aliphatic alcohol containing at least 5 carbon atoms.

2,449,026

PROCESS FOR PREPARING SALTS OF ALKYL PHENOL SULFIDES

Carll F. Van Gilder, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application April 20, 1944, Serial No. 531,992
6 Claims. (Cl. 260—609)



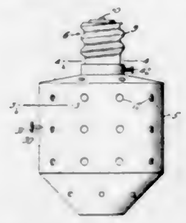
1. An improved process for manufacturing metal salts of the products resulting from the reaction of a sulfur halide with alkylated hydroxy aromatic compounds, which comprises neutralizing the reaction product in a mineral lubricating oil solution with a controlled amount of a basic metal compound, thereafter contacting the oil solution containing the neutralized material simultaneously with about 1 to 25% of carbon dioxide and 1 to 20% of water vapor, based on the metal salt present, and finally filtering the same, the amount of said basic metal compound being in excess of that theoretically required for neutralization but not sufficient to produce more than 2% by weight of precipitated colloidally dispersed metallic carbonate, based on the total weight of the reaction mixture, by reaction with the carbon dioxide and water.

2,449,027

CONVERSION OF HYDROCARBON OILS

Alexis Voorhies, Jr., East Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application June 4, 1946, Serial No. 674,342
11 Claims. (Cl. 196—52)

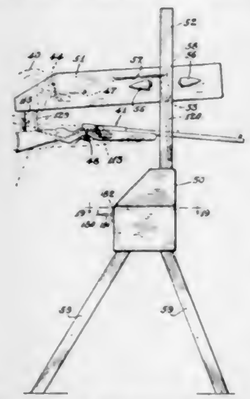


1. A process for the conversion of hydrocarbon oils which comprises passing the oil to be converted in vapor form through a conversion zone containing a subdivided conversion catalyst, removing gaseous conversion products containing entrained catalyst particles from the conversion zone, partially condensing the conversion products so withdrawn to form an initial condensate containing said entrained catalyst, separating said initial condensate from the remaining oil vapors, continuously withdrawing a stream of catalyst containing vaporizable hydrocarbons from the conversion zone, passing the catalyst so withdrawn into a stripping zone, passing a stripping gas through said stripping zone in contact with said catalyst to remove vaporizable con-

stituents from the catalyst therein, removing stripping gas containing entrained catalyst and hydrocarbon vapors from the stripping zone, passing the stripping gas so removed in contact with said first named condensate after separation from the remaining oil vapors to remove entrained catalyst contained in stripping gas.

2,449,028
PROCESS OF COMMINUTING IMPURE DDT
Isaac F. Walker, Hockessin, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 18, 1946, Serial No. 642,122
8 Claims. (Cl. 167—30)

1. A process which comprises comminuting in a high velocity gas disintegrator impure 1,1,1-trichloro-2,2-bis(p-chlorophenyl)ethane having a setting point of from 102 to 106° C. in the presence of a salt of an acid having an ionization constant of at least 3×10^{-7} at 25° C.



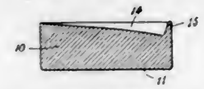
2,449,029
CURRENT-REGULATING PLUG AND SOCKET
Lincoln E. Wean, Philadelphia, Pa., and Lawrence J. McCarty, Merchantville, N. J.
Application September 22, 1944, Serial No. 555,342
2 Claims. (Cl. 171—119)

1. A current-regulating plug and socket comprising a casing having an input plug at one end adapted for removable reception in an outlet receptacle and an output socket at the other end adapted to removably receive an attachment plug, a transformer mounted in the casing and interposed in the circuit between said plug and said socket, said transformer comprising a primary winding connected to the contacts of said input plug and a contact of said output socket and a secondary winding having a plurality of taps, a series of fixed contacts mounted within the casing at one side of said transformer and connected to the respective taps, a movable contact movable longitudinally of the casing and selectively engageable with any desired one of said fixed contacts, manually operable means including an operating member accessible exteriorly and at one side of the casing for moving said movable contact, and an electrical connection between said movable contact and the remaining contact of the output socket.

2,449,030
TARGET PRACTICE APPARATUS
Irven H. Wilsey, Chicago, Ill.; Ruth Ann Wilsey executrix of said Irven H. Wilsey, deceased
Application March 9, 1942, Serial No. 433,961
3 Claims. (Cl. 273—101.2)

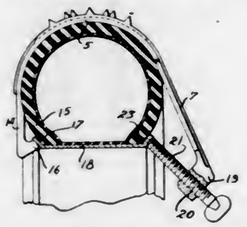
3. In an apparatus of the type set forth, the combination of a casing, an optical viewer, a moving picture screen in front of said viewer and adapted to be illuminated by images projected thereon from behind the screen, a gun disposed adjacent said casing and adapted to be gripped by the user when he is in position to peer through said viewer, a small-sized replica of the fore portion of said gun disposed in said casing so that the forward end thereof extends to within a short distance of said screen, means for supporting said gun for both horizontal and vertical swinging movement in the hands of the user to simulate

actual use, means supporting said replica for swinging movement both horizontally and vertically, means including a mechanical connection between said gun and said small-sized replica for moving the replica in unison with said gun and through substantially corresponding angles, both said screen and said replica being located within a few inches of the viewer, said viewer including optical eye pieces for bringing said screen and the fore portion of said replica into focus whereby said small-sized replica and the image on said screen appear to be full sized.



2,449,031
BRAKE CABLE ADJUSTER
James Morris Woodson, Greenwood, Va.
Application May 21, 1947, Serial No. 749,614
8 Claims. (Cl. 24—71.1)

1. Tightener for brake cords comprising two arms having adjacent ends pivotally associated to constitute a toggle joint, each of said arms having on one face oppositely disposed longitudinally spaced hooks and on the opposite face pivoted lugs, said lugs formed with oppositely threaded through orifices and a bolt having its end portions oppositely threaded to seat in said threaded orifices, whereby the angularity of said arms can be modified by rotation of said bolt.

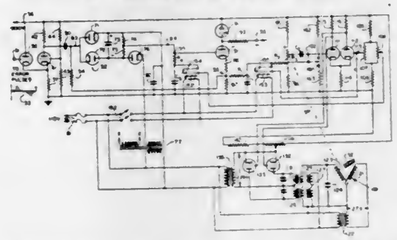


2,449,032
PLAYING BAR
Olen H. Yates, Pontiac, Mich.
Application June 5, 1945, Serial No. 597,693
5 Claims. (Cl. 84—319)

1. In a playing bar of the type described, a bar body having a longitudinal finger channel of substantially arcuate section along the top thereof to receive the first finger of the player, said channel terminating short of the forward end of

the bar body to provide a finger stop above the forward end of the said bar body.

2,449,033
ANTISKID TIRE CLAMP
David Younglove, Ilion, N. Y.
Application September 12, 1946, Serial No. 696,496
1 Claim. (Cl. 152—226)



A traction device for use on a tire and attachment to the out-turned side flanges of a tire-retaining rim comprising a hook-shaped member adapted to straddle the tire and provided on one end with gripping lugs adapted to seat against one of said flanges, said member having at its other end a reduced tongue adapted to extend alongside the other of said flanges, an end thumb screw in said tongue adapted to be turned against said other flange, said screw coacting with said lugs to clamp the member to the outer sides of said flanges.

2,449,034
TORQUE TOOL WITH RATCHET SIGNAL
Herman W. Zimmerman, North Newington, Conn.; Sylvia V. M. Zimmerman administratrix of said Herman W. Zimmerman, deceased
Application April 21, 1944, Serial No. 532,109
1 Claim. (Cl. 81—52.5)

A torque tool comprising in combination, a hub member having work engaging portions, a hand lever rotatable relative to said hub member, a flange on said hub member, a washer and a threaded member thereon, bearing collars on opposite faces of said hand lever of different material from the member on the hub and engaging said flange and washer respectively, means on said threaded means to vary the compression of said collars between said flange and washer, whereby the torque required to rotate said hand lever relative to said hub member may be regulated, ratchet means comprising a toothed wheel secured to the hub member and a resilient detent secured to said hand lever and engaging said toothed wheel to indicate when the frictional resistance has been exceeded and relative rotation of said hub member and lever is taking place, and sealing means for said threaded member in any predetermined adjusted position.

2,449,035
SMOOTHING SERVO
Francis P. Coffin, Jr., Schenectady, N. Y., and Frank E. Bothwell, Boston, and Prescott D. Crout, Lexington, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application April 12, 1946, Serial No. 661,594
4 Claims. (Cl. 318—18)

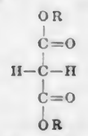
3. Apparatus for providing an output indicative of the trend of an input electrical error signal and substantially independent of discontinuous error signal jitter, comprising means for obtaining the integral of said error signal, means for obtaining a combined signal proportional to the sum of said error signal and said integral of said error signal, means for applying said combined signal to a resistance-capacitance network including a plurality of series resistance elements and shunt capacitance elements, said resistance-capacitance network providing the effects of inertia and damping, a potentiometer, one of said capacitance elements being connected to the movable tap of said potentiometer, said movable tap being operative from a position servo providing said output, said position servo being energized through said resistance-capacitance network.

2,449,036
MANUFACTURE OF PRIMARY AMINES
Maximilien Grunfeld, Lyon, France; vested in the Attorney General of the United States
No Drawing. Application February 8, 1941, Serial No. 378,061. In Great Britain November 2, 1939
Sections 3 and 14, Public Law 690, August 8, 1946
Patent expires November 2, 1959
8 Claims. (Cl. 260—583)

1. A process for the manufacture of hexamethylenediamine by liquid phase catalytic hydrogenation of adipic dinitrile which comprises subjecting the liquid adipic dinitrile to catalytic hydrogenation at a temperature below 100° C. and in the presence of a concentrated aqueous solution of a strong base, the amount of said strong base which is present being from about 0.1% to about 10% of the weight of the said adipic dinitrile employed.

2,449,037
METHOD OF SEISMIC EXPLORATION OPERATIONS
Travis O. Harkness, Shreveport, La., assignor, by mesne assignments, to C. H. C. Patent Corporation, Texarkana, Tex., a corporation of Texas
Application November 30, 1945, Serial No. 631,846
1 Claim. (Cl. 181—0.5)

A method of creating pulsations in the earth in seismic exploration operations comprising the steps of drilling a hole in the earth, setting a relatively malleable steel pipe having a gauge within the limits of .055 inch and .075 inch in the

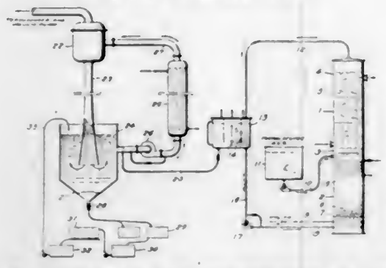


hole and detonating an explosive charge in the lower reaches of the pipe whereupon the pipe

will collapse inwardly adjacent the explosion substantially closing the pipe.

2,449,038
PREPARATION OF 3-SUBSTITUTED BENZOTETRONIC ACID AND SALTS THEREOF
Martin E. Hultquist, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 23, 1944, Serial No. 560,040
12 Claims. (Cl. 260—344.6)

12. The method of preparing 3-substituted benzotetronic acid and salts thereof which comprises mixing acetylsalicylyl halide with a compound having the formula



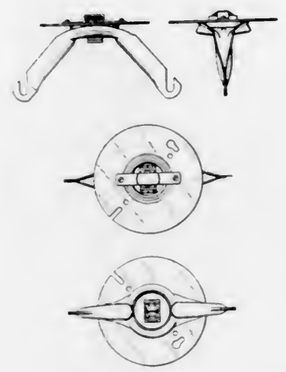
in which R is an alkyl radical, in the presence of water and an alkali metal hydroxide at a temperature not in excess of about 40° C.

2,449,039
THERAPEUTIC COMPOSITION
Raymond L. Libby, Poundridge, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 22, 1945, Serial No. 618,054
7 Claims. (Cl. 167—65)

6. A new article of manufacture comprising discrete particles of a stable, therapeutically active derivative of penicillin covered with a substantially water impermeable enteric coating, and a water insoluble assimilable glyceride, in which said enteric coated particles are suspended, the whole mixture being enclosed in a gelatin capsule.

2,449,040
MANUFACTURE OF HEXAMETHYLENE TETRAMINE
Pierre Schideler, New York, N. Y., and Charles Prescott Davis, Stamford, Conn., assignors to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application December 30, 1942, Serial No. 470,593
2 Claims. (Cl. 260—238)

1. A process for the manufacture of hexamethylene tetramine which comprises introducing ammonia and formaldehyde into a rapidly moving aqueous solution containing hexamethylene tetramine, reacting the formaldehyde and ammonia by passing the resulting solution through a cooled reaction zone, concentrating the reacted solution by low temperature evaporation, crystallizing hexamethylene tetramine therefrom, recirculating one portion of the mother liquor through the ammonia and formaldehyde addition zones and through the reaction zone, and passing the remainder of the mother liquor in heat exchange relation with the solution in the reaction zone to extract reaction heat therefrom.



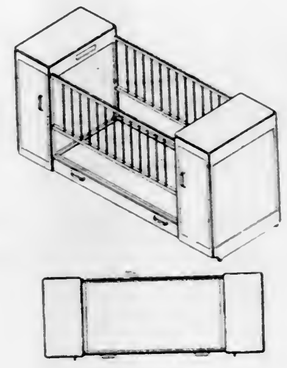
2,449,041
RIBOFLAVIN SOLUTIONS
Sidney D. Upham, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 12, 1946, Serial No. 661,877
1 Claim. (Cl. 167—81)

A storage-stable, sterile therapeutic vitamin preparation, suitable for either oral or parenteral use comprising propylene glycol as a solvent, and dissolved therein, to form a clear solution, sufficient riboflavin citrate to be the physiological equivalent of not less than 2 milligrams of riboflavin per cubic centimeter of solution.

DESIGNS

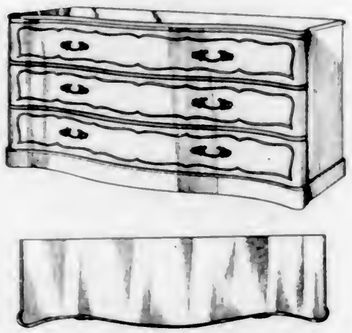
SEPTEMBER 7, 1948

150,820
DESIGN FOR A LIGHT FIXTURE SUPPORT
Ernst G. Anderson, deceased, late of Chicago, Ill., by E. Harold Anderson, administrator, Lake Bluff, Ill., assignor to Simplet Electric Co., Chicago, Ill., a corporation of Illinois
Application July 8, 1946, Serial No. 131,369
Term of patent 14 years
(Cl. D26—1)



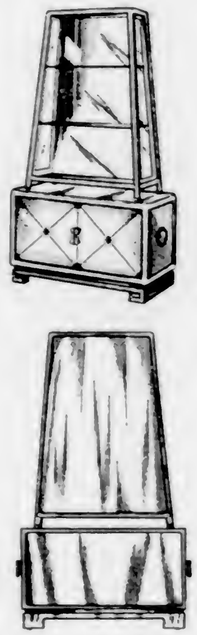
The ornamental design for a light fixture support, substantially as shown.

150,821
DESIGN FOR A TELEPHONE HOLDER
Raymond B. Bianchi, Chicago, Ill., assignor of one-half to Ned E. Cahen, Chicago, Ill.
Application May 18, 1946, Serial No. 129,842
Term of patent 3½ years
(Cl. D26—14)



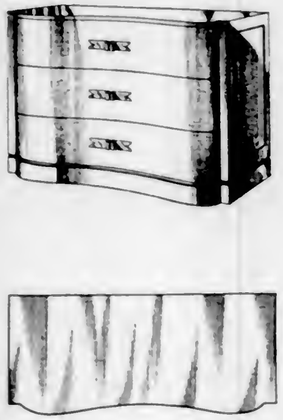
The ornamental design for a telephone holder, substantially as shown.

150,822
DESIGN FOR A NURSERY BED UNIT
Arthur M. Bleich, Cambridge, Ohio
Application October 21, 1946, Serial No. 134,136
Term of patent 14 years
(Cl. D5—5)



The ornamental design for nursery bed unit, substantially as shown.

150,823
DESIGN FOR A CHEST OR SIMILAR ARTICLE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 11, 1947, Serial No. 137,514
Term of patent 7 years
(Cl. D33—13)

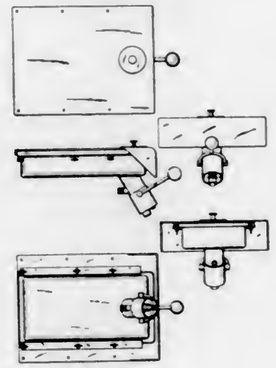


The ornamental design for a chest or similar article, substantially as shown.

150,824
DESIGN FOR A CREDENZA OR SIMILAR ARTICLE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 11, 1947, Serial No. 137,512
Term of patent 7 years
(Cl. D33—13)

The ornamental design for a credenza or similar article, substantially as shown and described.

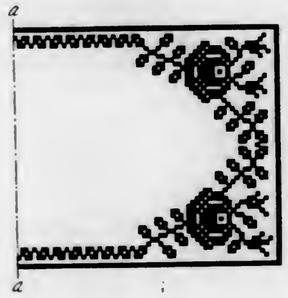
150,825
DESIGN FOR A CHEST OR SIMILAR ARTICLE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 11, 1947, Serial No. 137,515
Term of patent 7 years
(Cl. D33—13)



The ornamental design for a chest or similar article, substantially as shown and described.

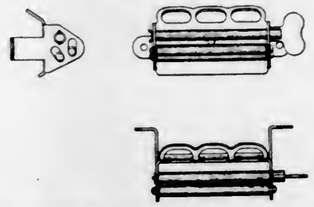
150,826
DESIGN FOR A COMBINED COMPACT AND SCENT SPRAY
Richard Bugbee, Milner, British Columbia, Canada
Application December 12, 1947, Serial No. 143,109
Term of patent 7 years
(Cl. D86—10)

The ornamental design for a combined compact and scent spray, as shown and described.

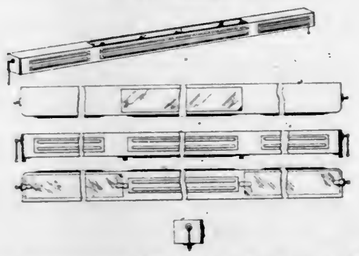


150,827
DESIGN FOR A BEVERAGE DISPENSER
Archibald R. Burgess, St. Louis, Mo., assignor to AMP Corporation, St. Louis, Mo., a corporation of Missouri
Application October 30, 1946, Serial No. 134,393
Term of patent 14 years
(Cl. D2—3)

The ornamental design for a beverage dispenser, substantially as shown.

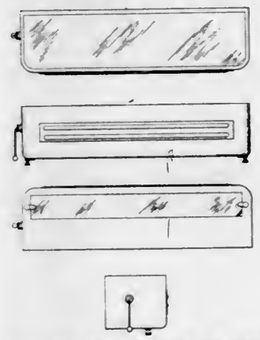


150,828
DESIGN FOR A CROCHETED DOILY OR THE LIKE
Mildred R. Craig, Erwin, W. Va.
Application May 8, 1947, Serial No. 138,922
Term of patent 3½ years
(Cl. D3—9)



The ornamental design for a crocheted doily or the like, as shown and described.

150,829
DESIGN FOR A TUBE AND TOOTHBRUSH HOLDER
Joseph W. Doucette, Waltham, Mass.
Application December 19, 1945, Serial No. 124,854
Term of patent 14 years
(Cl. D4—3)

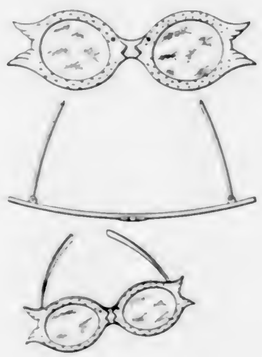


The ornamental design for a tube and toothbrush holder, as shown.

150,830
DESIGN FOR A LIGHTING FIXTURE
Charles A. Duepner, Minneapolis, Minn., assignor to Branham, Mareck & Duepner, Inc., Minneapolis, Minn., a corporation of Minnesota
Application November 9, 1946, Serial No. 134,638
Term of patent 3½ years
(Cl. D48—4)

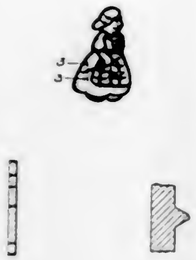
The ornamental design for a lighting fixture, as shown.

150,831
DESIGN FOR A LIGHTING FIXTURE
Charles A. Duepner, Minneapolis, Minn., assignor to Branham, Mareck & Duepner, Inc., Minneapolis, Minn., a corporation of Minnesota
Application November 9, 1946, Serial No. 134,638
Term of patent 3½ years
(Cl. D48—4)



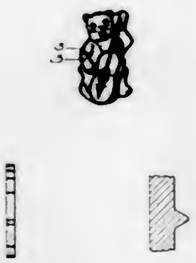
The ornamental design for a lighting fixture, as shown.

150,832
DESIGN FOR A CLOCK
Estelle M. Fenenbock, North Hollywood, Calif.
Application November 14, 1947, Serial No. 142,526
Term of patent 3½ years
(Cl. D42—7)



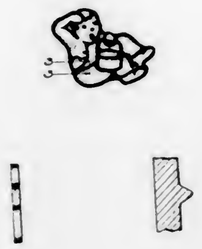
The ornamental design for a clock, substantially as shown.

150,833
DESIGN FOR SUN GLASSES
Lucian M. Flagg, Mount Penn, near Reading, Pa.
Application August 14, 1947, Serial No. 140,872
Term of patent 7 years
(Cl. D57—1)



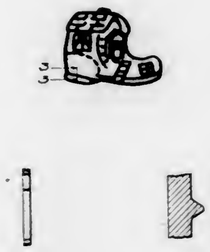
The ornamental design for sun glasses, as shown.

150,834
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,530
Term of patent 14 years
(Cl. D8—2)



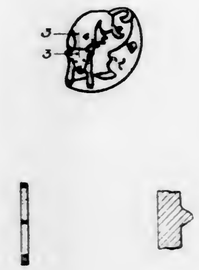
The ornamental design for a cooky, as shown.

150,835
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,531
Term of patent 14 years
(Cl. D8—2)



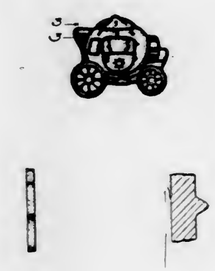
The ornamental design for a cooky, as shown.

150,836
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,532
Term of patent 14 years
(Cl. D8—2)



The ornamental design for a cooky, as shown.

150,837
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,533
Term of patent 14 years
(Cl. D8—2)



The ornamental design for a cooky, as shown.

150,838
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,535
Term of patent 14 years
(Cl. D8—2)

The ornamental design for a cooky, as shown.

150,839
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,536
Term of patent 14 years
(Cl. D8—2)

The ornamental design for a cooky, as shown.

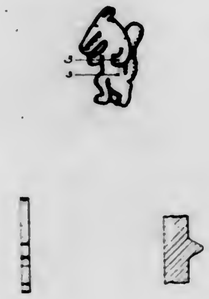
150,840
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application June 8, 1946, Serial No. 130,537
Term of patent 14 years
(Cl. D8—2)

The ornamental design for a cooky, as shown.

150,841
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies, Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 131,987
Term of patent 14 years
(Cl. D8—2)

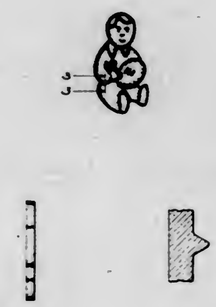
The ornamental design for a cooky, as shown.

150,842
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies, Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 131,988
Term of patent 14 years
(Cl. D8—2)



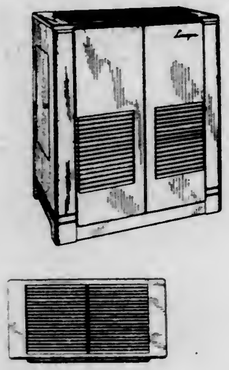
The ornamental design for a cooky, as shown.

150,843
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies, Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 131,990
Term of patent 14 years
(Cl. D8—2)



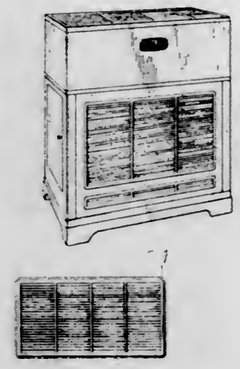
The ornamental design for a cooky, as shown.

150,844
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies, Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 131,991
Term of patent 14 years
(Cl. D8—2)



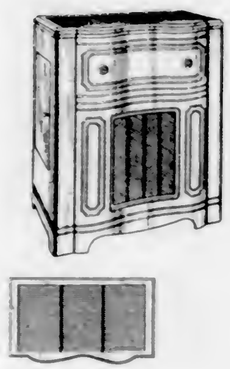
The ornamental design for a cooky, as shown.

150,845
DESIGN FOR A COOKY
Walter O. Forrer, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Tip Top Cookies, Inc., Ripon, Wis., a corporation of Wisconsin, and one-half to Kiddie Kookies Co., Fairwater, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 131,992
Term of patent 14 years
(Cl. D8—2)



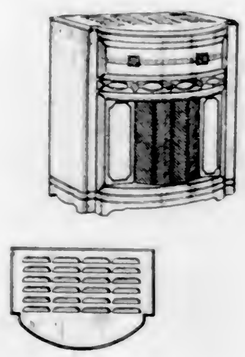
The ornamental design for a cooky, as shown.

150,846
DESIGN FOR A CABINET FOR SPACE HEATERS OR THE LIKE
Carl S. Greer, Jr., Albion, Mich., assignor to Gamble Stores Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application October 9, 1947, Serial No. 141,837
Term of patent 14 years
(Cl. D81—19)



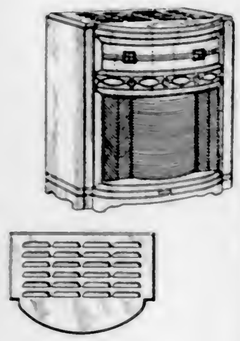
The ornamental design for a cabinet for space heaters or the like, substantially as shown and described.

150,847
DESIGN FOR A CABINET FOR SPACE HEATERS OR THE LIKE
Carl S. Greer, Jr., Albion, Mich., assignor to Lonergan Manufacturing Company, Albion, Mich., a corporation of Michigan
Application October 9, 1947, Serial No. 141,838
Term of patent 14 years
(Cl. D81—19)



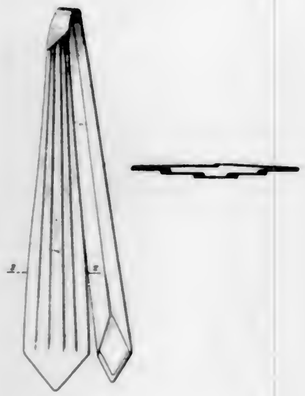
The ornamental design for a cabinet for space heaters or the like, substantially as shown and described.

150,848
DESIGN FOR A CABINET FOR SPACE HEATERS OR THE LIKE
Carl S. Greer, Jr., Albion, Mich., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois
Application October 9, 1947, Serial No. 141,839
Term of patent 14 years
(Cl. D81—19)



The ornamental design for a cabinet for space heaters or the like, substantially as shown and described.

150,849
DESIGN FOR A CABINET FOR SPACE HEATERS OR THE LIKE
Carl S. Greer, Jr., Albion, Mich., assignor to Lonergan Manufacturing Company, Albion, Mich., a corporation of Michigan
Application October 9, 1947, Serial No. 141,840
Term of patent 14 years
(Cl. D81—19)

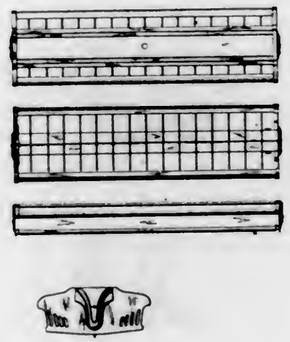


The ornamental design for a cabinet for space heaters or the like, substantially as shown and described.

150,850
DESIGN FOR A CABINET FOR SPACE HEATERS OR THE LIKE
Carl S. Greer, Jr., Albion, Mich., assignor to Lonergan Manufacturing Company, Albion, Mich., a corporation of Michigan
Application October 9, 1947, Serial No. 141,841
Term of patent 14 years
(Cl. D81—19)

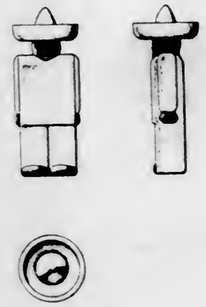
The ornamental design for a cabinet for space heaters or the like, substantially as shown and described.

150,851
DESIGN FOR A PLEATED NECKTIE
Jacob B. Grinoch, New York, N. Y.
Application March 5, 1947, Serial No. 137,363
Term of patent 14 years
(Cl. D3—16)



The ornamental design for a pleated necktie, as shown and described.

150,852
DESIGN FOR A COMB HOLDER
Adam J. Gurczak, Buffalo, N. Y.
Application April 29, 1947, Serial No. 138,683
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a comb holder, as shown.

150,853
DESIGN FOR A LIGHTING FIXTURE
Edwin F. Guth, Florissant, and Ervin C. Koegel, St. Louis, Mo., assignors to The Edwin F. Guth Company, St. Louis, Mo., a corporation of Missouri
Application October 6, 1947, Serial No. 141,764
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a lighting fixture, substantially as shown.

150,854
DESIGN FOR A CONTAINER FOR LIQUID COSMETICS
Mauro Herrera, Jr., Hollywood, Calif.
Application November 18, 1946, Serial No. 134,847
Term of patent 7 years
(Cl. D58—9)

The ornamental design for a container for liquid cosmetics, as shown.

150,855
DESIGN FOR A BROOCH PIN OR SIMILAR ARTICLE
Sylvia Hobe, New York, N. Y.
Application June 13, 1947, Serial No. 139,631
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch pin or similar article, substantially as shown.

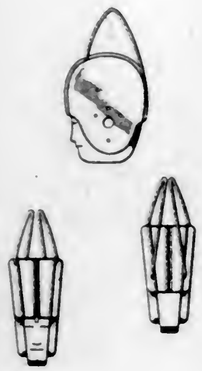
150,856
DESIGN FOR A BROOCH PIN OR SIMILAR ARTICLE
Sylvia Hobe, New York, N. Y.
Application June 13, 1947, Serial No. 139,632
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch pin or similar article, substantially as shown.

150,857
DESIGN FOR A BROOCH PIN OR SIMILAR ARTICLE
Sylvia Hobe, New York, N. Y.
Application June 13, 1947, Serial No. 139,633
Term of patent 3½ years
(Cl. D45—19)

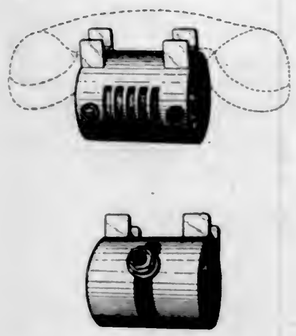
The ornamental design for a brooch pin or similar article, substantially as shown.

150,858
DESIGN FOR A BROOCH PIN OR SIMILAR ARTICLE
Sylvia Hobe, New York, N. Y.
Application June 13, 1947, Serial No. 139,634
Term of patent 3½ years
(Cl. D45—19)



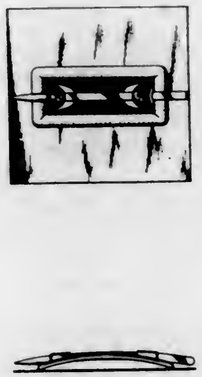
The ornamental design for a brooch pin or similar article, substantially as shown.

150,859
DESIGN FOR A BROOCH PIN OR SIMILAR ARTICLE
Sylvia Hobe, New York, N. Y.
Application June 13, 1947, Serial No. 139,635
Term of patent 3½ years
(Cl. D45—19)



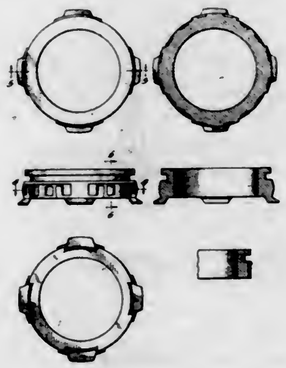
The ornamental design for a brooch pin or similar article, substantially as shown.

150,860
DESIGN FOR A HANDBAG
John I. Horner, Los Angeles, Calif.
Application November 7, 1947, Serial No. 142,372
Term of patent 14 years
(Cl. D87—3)



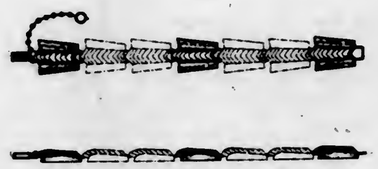
The ornamental design for a handbag, as shown.

150,861
DESIGN FOR A COMMUNICATIONS UNIT OR THE LIKE
Leo J. Hruska, Lutherville, and William W. Garbutt, Baltimore, Md., assignors to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application November 4, 1946, Serial No. 134,497
Term of patent 3½ years
(Cl. D26—14)



The ornamental design for a communications unit or the like, as shown and described.

150,862
DESIGN FOR A CARDED TWO-PIECE HAIR ORNAMENT
Jules Jackson, Great Neck, N. Y.
Application November 21, 1945, Serial No. 123,955
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a carded two-piece hair ornament, as shown.

150,863
DESIGN FOR A BASE FOR A LIPSTICK HOLDER
Richard C. Jones, Chicago, Ill., assignor to Associated Products, Inc., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,284
Term of patent 3½ years
(Cl. D86—10)

The ornamental design for a base for a lipstick holder, substantially as shown.

150,864
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,269
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

150,865
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,759
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,866
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,760
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,867
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,761
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,868
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,768
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,869
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,792
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

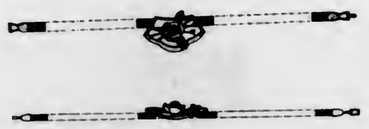
150,870
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,928
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,871
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,931
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,872
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,937
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

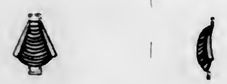
150,873
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,965
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,874
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 26, 1948, Serial No. 144,060
Term of patent 7 years
(Cl. D45—16)

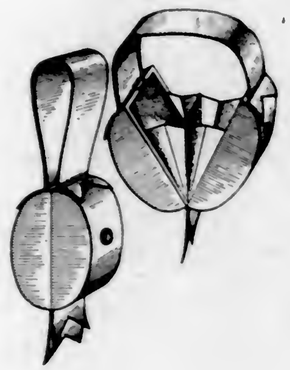
The ornamental design for a necklace or similar article, substantially as shown and described.

150,875
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 26, 1948, Serial No. 144,061
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

150,876
DESIGN FOR A JEWELRY FINDING
Adolph Katz, Providence, R. I., assignor to Coro, Inc., a corporation of New York
Application January 27, 1948, Serial No. 144,085
Term of patent 7 years
(Cl. D45—1)



The ornamental design for a jewelry finding, substantially as shown.

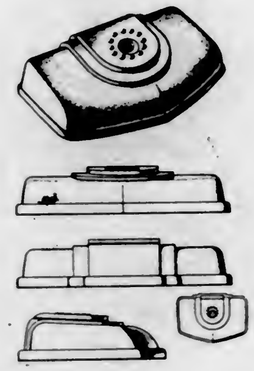
150,877
DESIGN FOR A LINK FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,087
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a link for a bracelet or similar article, substantially as shown.

150,878
DESIGN FOR A LADY'S HANDBAG
Anna Konelsky, New York, N. Y.
Application December 16, 1947, Serial No. 143,163
Term of patent 7 years
(Cl. D87—3)

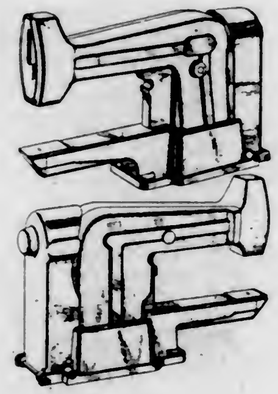
The ornamental design for a lady's handbag, substantially as shown.

150,879
DESIGN FOR A PERSONALIZED BIRTHDAY CANDLE
Leo Lion, New York, N. Y.
Application September 23, 1946, Serial No. 133,525
Term of patent 7 years
(Cl. D73—1)



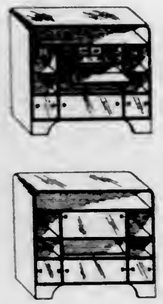
The ornamental design for a personalized birthday candle, as shown.

150,880
DESIGN FOR A BROOCH OR THE LIKE
Thornton J. Manry, Kansas City, Mo., assignor to The Green Company, Incorporated, Kansas City, Mo., a corporation of Missouri
Application October 13, 1947, Serial No. 141,878
Term of patent 14 years
(Cl. D45—19)



The ornamental design for a brooch or the like, as shown.

150,881
DESIGN FOR A DESK SET INKWELL
Robert A. May, Merion, and Harold E. Steinberg, Philadelphia, Pa., assignors to The Esterbrook Pen Company, Camden, N. J., a corporation of New Jersey
Application June 2, 1947, Serial No. 139,406
Term of patent 14 years
(Cl. D74—8)

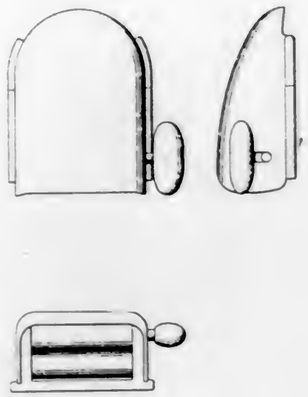


The ornamental design for a desk set inkwell, substantially as shown and described.

150,882
DESIGN FOR A SEWING MACHINE FRAME
Michael McCann, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 2, 1946, Serial No. 133,688
Term of patent 14 years
(Cl. D70—1)

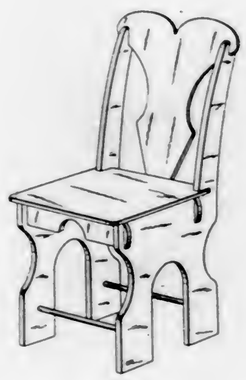
The ornamental design for a sewing machine frame, as shown.

150,883
DESIGN FOR A COMBINED DESK AND BOOKCASE
Paul L. Peterson, Los Angeles, Calif.
Application April 16, 1947, Serial No. 138,441
Term of patent 14 years
(Cl. D33—7)



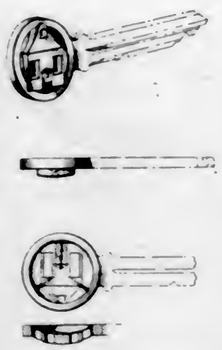
The ornamental design for a combined desk and bookcase, as shown.

150,884
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 29, 1947, Serial No. 136,504
Term of patent 7 years
(Cl. D45—19)



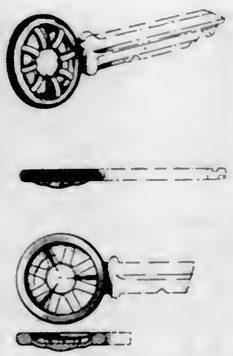
The ornamental design for a brooch or similar article, substantially as shown.

150,885
DESIGN FOR A DISPENSING DEVICE FOR COLLAPSIBLE TUBE
William E. Richardson, Detroit, Mich.
Application May 13, 1946, Serial No. 129,639
Term of patent 3½ years
(Cl. D4—3)



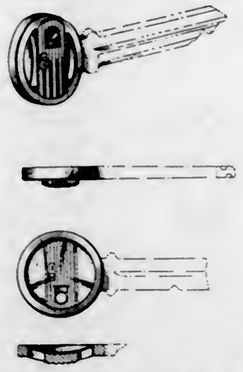
The ornamental design for a dispensing device for collapsible tube, substantially as shown.

150,886
DESIGN FOR A CHAIR
Walter C. Ross, Belleville, Ill.
Original application December 29, 1945, Serial No. 125,152. Divided and this application February 3, 1947, Serial No. 136,651
Term of patent 14 years
(Cl. D15—1)



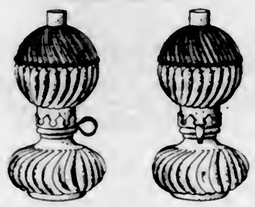
The ornamental design for a chair, as shown.

150,887
DESIGN FOR A KEY OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application September 6, 1946, Serial No. 133,110
Term of patent 14 years
(Cl. D50—4)



The ornamental design for a key or the like, substantially as shown and described.

150,888
DESIGN FOR A KEY OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application September 6, 1946, Serial No. 133,112
Term of patent 14 years
(Cl. D50—4)

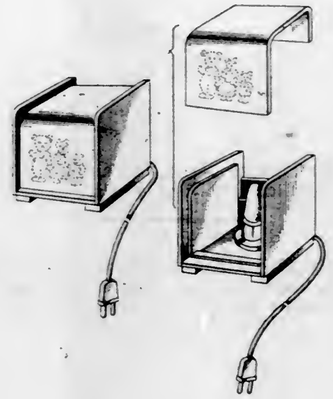


The ornamental design for a key or the like, substantially as shown and described.

150,889
DESIGN FOR A KEY OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application September 6, 1946, Serial No. 133,113
Term of patent 14 years
(Cl. D50—4)

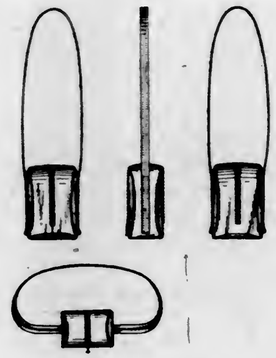
The ornamental design for a key or the like, substantially as shown and described.

150,890
DESIGN FOR A BOTTLE
Herbert Rubin, New York, N. Y.
Application January 4, 1947, Serial No. 135,945
Term of patent 3½ years
(Cl. D58—8)



The ornamental design for a bottle, substantially as shown.

150,891
DESIGN FOR A BOTTLE
Herbert Rubin, New York, N. Y.
Application January 4, 1947, Serial No. 135,946
Term of patent 3½ years
(Cl. D58—8)

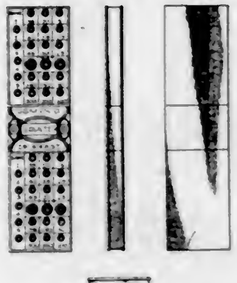


The ornamental design for a bottle, substantially as shown.

150,892
DESIGN FOR A LAMP OR THE LIKE
Irving Sacks, Brooklyn, N. Y.
Application March 6, 1947, Serial No. 137,408
Term of patent 3½ years
(Cl. D48—20)

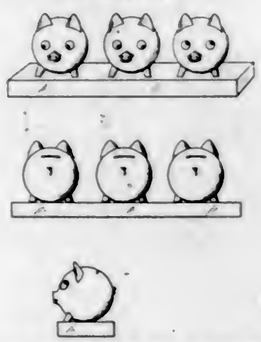
The ornamental design for a lamp or the like, substantially as shown and described.

150,893
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Jerome S. Singer, New York, N. Y.
Application November 4, 1947, Serial No. 142,299
Term of patent 14 years
(Cl. D87—3)



The ornamental design for a handbag or similar article, substantially as shown.

150,894
DESIGN FOR A FOLDING ROCKING CHAIR OR SIMILAR ARTICLE
Herman A. Smith, New York, N. Y.
Application March 21, 1947, Serial No. 137,794
Term of patent 7 years
(Cl. D15—6)



The ornamental design for a folding rocking chair or similar article, as shown.

150,895
DESIGN FOR A GAME COUNTING BOARD
Luther F. Stewart, Brownwood, Tex.
Application May 29, 1947, Serial No. 139,358
Term of patent 7 years
(Cl. D34—5)

The ornamental design for a game counting board, as shown and described.

150,896
DESIGN FOR A CHILD'S BANK
Katherine Heinrich Stovner, Denver, Colo.
Application March 24, 1947, Serial No. 137,843
Term of patent 7 years
(Cl. D34—11)

The ornamental design for a child's bank, as shown.

150,897
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,214
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,898
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,215
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,899
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,216
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,900
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,217
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,901
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,218
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress substantially as shown.

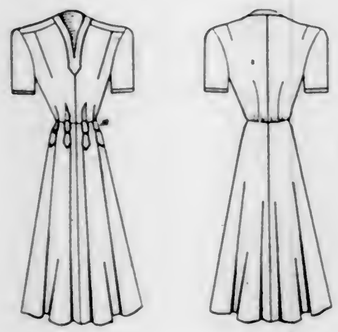
150,902
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,219
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,903
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,220
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,904
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,223
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

150,905
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,226
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

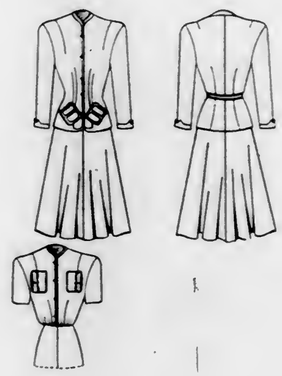
150,906
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,227
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

150,907
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,228
Term of patent 3½ years
(Cl. D3—26)

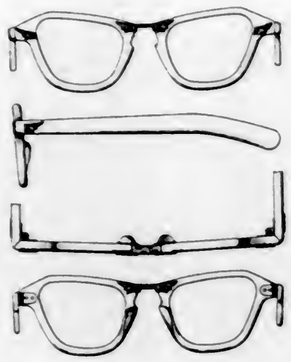
The ornamental design for a dress, substantially as shown.

150,908
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,229
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

150,909
DESIGN FOR A COAT
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,230
Term of patent 3½ years
(Cl. D3—4)

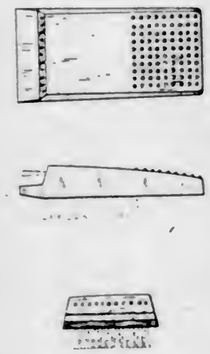


The ornamental design for a coat, substantially as shown.

150,910
DESIGN FOR A DRESS ENSEMBLE
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,231
Term of patent 3½ years
(Cl. D3—26)

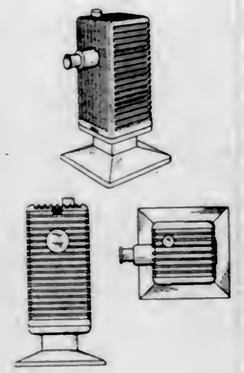
The ornamental design for a dress ensemble, substantially as shown and described.

150,911
DESIGN FOR A SPECTACLE FRAME
Vincent Tanasso, Harrison, N. Y.
Application November 13, 1947, Serial No. 142,513
Term of patent 7 years
(Cl. D57—1)



The ornamental design for a spectacle frame, as shown and described.

150,912
DESIGN FOR A COMBINED DRAWER PULL AND LABEL HOLDER
Gilbert Stanley Underwood, Washington, D. C.
Application December 9, 1946, Serial No. 135,360
Term of patent 3½ years
(Cl. D10—8)



The ornamental design for a combined drawer pull and label holder, as shown and described.

150,913
DESIGN FOR A HAND AND NAIL BRUSH
Franz Wagner, Chicago, Ill., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 14, 1946, Serial No. 133,948
Term of patent 3½ years
(Cl. D9—2)

The ornamental design for a hand and nail brush, substantially as shown and described.

150,914
DESIGN FOR A PICTURE PROJECTOR
Herman Wolfer, Trenton, N. J., and Milton Marder, Morton, Pa.
Application July 3, 1947, Serial No. 140,090
Term of patent 3½ years
(Cl. D61—1)

The ornamental design for a picture projector, as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

A B C Distributors: *See*—
Thornton Co., John C.

Airken, Inc., New York, N. Y. Diaper odor counteractant. Serial No. 550,641, Sept. 14. Class 6.

Allen Manufacturing Co., W. D., Chicago, Ill. Separable hose couplings, and hose menders. Serial No. 517,447, Sept. 14. Class 13.

Altone Chemical Company, Inc., New Orleans, La. Antiseptic mouth wash. Serial No. 552,104, Sept. 14. Class 6.

Amalgamated Dental Company, The, Limited, London, England. Chemical preparations. Serial No. 502,868, Sept. 14. Class 44.

American Alkyd Industries, Carlstadt, N. J. Synthetic varnishes. Serial No. 537,768, Sept. 14. Class 16.

American Cyanamid Company, New York, N. Y. Anti histaminic preparations. Serial No. 544,837, Sept. 14. Class 6.

American Glossite Co., Incorporated, Putnam, Conn. Mechanically grooved phonograph records. Serial No. 540,511, Sept. 14. Class 36.

American Varnish Company, The, Chicago, Ill. Varnishes; ready-mixed, dry, and paste paints; oil and varnish stains; etc. Serial No. 499,461, Sept. 14. Class 16.

Angier Corporation, Framingham, Mass. Adhesive-coated, strand-reinforced paper tape. Serial No. 531,286, Sept. 14. Class 5.

Argus, Incorporated, Ann Arbor, Mich. Photographic lenses. Serial No. 511,195, Sept. 14. Class 26.

Arma Textile Manufacturing Co., Manchester, N. H., and New York, N. Y. Interlining fabrics of combinations of cotton and wool, cotton and hair, wool and hair, etc. Serial No. 498,479, Sept. 14. Class 42.

Atlas Powder Company, Wilmington, Del. Lacquers; varnishes; paints, enamels, etc. Serial No. 514,930, Sept. 14. Class 16.

Avon Products, Inc., New York, N. Y. Shaving cream, shaving stick, toilet soap, etc. Serial No. 536,991, Sept. 14. Class 4.

Bally Manufacturing Co., Chicago, Ill. Ball rolling games having a board and balls. Serial No. 532,200, Sept. 14. Class 22.

Bancroft & Sons Co., Joseph, Wilmington, Del. Piece goods. Serial No. 529,344, Sept. 14. Class 42.

Bancroft & Sons Co., Joseph, Wilmington, Del. Piece goods. Serial No. 529,346, Sept. 14. Class 42.

Barret Textile Corporation, New York, N. Y. Plastic coated textile fabrics of cotton, wool, silk, etc. Serial No. 517,397, Sept. 14. Class 42.

Bartlett-Collins Company, Sapulpa, Okla. Oyster cocktail glasses, sherbet glasses, glass tumblers, etc. Serial No. 528,906, Sept. 14. Class 33.

Baxter Laboratories, Inc., Glenview, Ill. Injectable pyrogen. Serial No. 534,592, Sept. 14. Class 6.

Bell & Howell Company, Chicago, Ill. Projection lenses. Serial No. 529,562, Sept. 14. Class 26.

Bell & Howell Company, Chicago, Ill. Projector stands. Serial No. 529,571, Sept. 14. Class 26.

Bell & Howell Company, Chicago, Ill. Photographic lenses. Serial No. 531,293, Sept. 14. Class 26.

Bemis Bro. Bag Company, St. Louis, Mo. Bags made from laminated material composed of layers of textile and paper. Serial No. 526,844, Sept. 14. Class 2.

Benrose Fabrics Corporation, New York, N. Y. Textile fabrics in the piece of silk and synthetic fibers. Serial No. 536,490, Sept. 14. Class 42.

Bett-Morr Orchards, Inc., Charles-Town, W. Va. Fresh apples. Serial No. 532,798, Sept. 14. Class 46.

Big Giant, Inc., Fargo, N. Dak. Potato chips. Serial No. 522,314, Sept. 14. Class 46.

Blanke-Baer Extract & Preserving Company, St. Louis, Mo. Jellies, jams, fruit butters, etc. Serial No. 527,320, Sept. 14. Class 46.

Bob-O-Link, Inc., New York, N. Y. Curtains, and drapes of rayon, cotton, silk, etc. Serial No. 516,660, Sept. 14. Class 42.

Bolzelle & Eisinger Corporation, Rockville, Md. Bagatelle type amusement game. Serial No. 539,123, Sept. 14. Class 22.

Boles, Donald R., doing business as Boles Mfg. Co., Burbank, Calif. House trailers. Serial No. 537,869, Sept. 14. Class 19.

Boles Mfg. Co.: *See*—
Boles, Donald R.

Boorum & Pease Company, Brooklyn, N. Y. Loose leaf paper. Serial No. 533,130, Sept. 14. Class 37.

Botany Mills, Inc.: *See*—
Botany Worsted Mills.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial No. 550,116, Sept. 14. Class 42.

Botany Worsted Mills, now by change of name Botany Mills, Inc., Passaic, N. J. Woolen piece goods. Serial No. 511,448, Sept. 14. Class 42.

Boysen, Walter N., Co., Oakland, Calif. Paints both paste and liquid, varnishes, etc. Serial No. 522,721, Sept. 14. Class 16.

Brazier, John S., doing business as Brazier's Laboratory, Donaldsonville, La. Preparation for the relief of rheumatism, arthritis, and neuralgia. Serial No. 551,513, Sept. 14. Class 6.

Brazier's Laboratory: *See*—
Brazier, John S.

Brezner, N., & Co., Inc., Boston, Mass. Upper leathers. Serial No. 540,375, Sept. 14. Class 1.

Brno Arms Factory, National Corporation: *See*—
Zbrojovka Brno, N. P.

Bruce's Juices, Inc., Tampa, Fla. Canned citrus fruit meats in juice syrup. Serial No. 500,275, Sept. 14. Class 46.

Burrell-Dugger Company, Indianapolis, Ind. Poultry worming compound. Serial No. 551,764, Sept. 14. Class 6.

Burwood Products Company, Traverse City, Mich. Candy boxes; card boxes; bud vases, etc. Serial No. 513,494, Sept. 14. Class 2.

California Marine Curing & Packing Co., Terminal Island, Calif. Canned tuna. Serial No. 536,232, Sept. 14. Class 46.

Cardinet Candy Company, Inc., Oakland, Calif. Candy. Serial No. 544,657; Sept. 14. Class 46.

Carter Dry Goods Company, Incorporated, Louisville, Ky. Tobacco bed covers. Serial No. 521,432, Sept. 14. Class 42.

Caterpillar Tractor Co., Peoria, Ill. Electric generators and Diesel electric generator sets and parts for said products. Serial No. 540,642, Sept. 14. Class 21.

Century Ribbon Mills, Inc., New York, N. Y. Ribbons in cut lengths and in reels. Serial No. 537,005, Sept. 14. Class 42.

Cheesteak Company, The: *See*—
Eckhoff, Orville E.

Chicago and North Western Railway Company, Chicago, Ill. Railway freight and passenger transportation services. Serial Nos. 528,058–9, Sept. 14. Class 55.

Church & Dwight Co. Inc., New York, N. Y. Baking soda and bicarbonate of soda. Serial No. 518,824, Sept. 14. Class 4.

Church & Dwight Co., Inc., New York, N. Y. Sal soda, washing soda, monohydrated carbonate of soda, etc. Serial No. 526,778, Sept. 14. Class 6.

Church & Dwight Co., Inc., New York, N. Y. Sal soda, washing soda, monohydrated carbonate of soda, etc. Serial No. 526,797, Sept. 14. Class 4.

Cincinnati Clock & Instrument Co., Cincinnati, Ohio. Instrument for testing and analyzing circuit breakers. Serial No. 531,652, Sept. 14. Class 26.

Clearwater Finishing Company, Clearwater, S. C. Piece goods of wool, cotton, rayon, etc. Serial No. 543,420, Sept. 14. Class 42.

Cold Par Products Co. Inc., New York, N. Y. Soap and soap compounds. Serial No. 531,462, Sept. 14. Class 4.

Coleman, George D., Aberdeen, Miss. Preparations for the hair and scalp. Serial No. 549,421, Sept. 14. Class 6.

Colorado Fuel and Iron Corporation, The, Denver, Colo. Wire fencing. Serial No. 523,649, Sept. 14. Class 13.

Columbia Records, Inc., Bridgeport, Conn. Mechanically grooved phonograph records and record blanks. Serial No. 544,550, Sept. 14. Class 36.

Columbus McKinnon Chain Corporation, Tonawanda, N. Y. General purpose chains. Serial No. 510,425, Sept. 14. Class 13.

Contact Lens Service, Inc., New York, N. Y., assignor to Precision Contacts, Inc., Minneapolis, Minn., now by change of name Precision-Contact Company, Inc. Eye impression material. Serial No. 538,725, Sept. 14. Class 44.

Courtley, Ltd., New York, N. Y. Soaps, and shaving creams and soaps. Serial No. 524,302, Sept. 14. Class 4.

Courtley, Ltd., New York, N. Y. Shaving creams. Serial No. 524,303, Sept. 14. Class 4.

Coutinho, Henri, doing business as The Sintos Co., New York, N. Y. Cough syrup. Serial No. 548,805, Sept. 14. Class 6.

Cover, S. E., Andrews, N. C. Preparation for the treatment of athlete's foot, and itching toes. Serial No. 551,694, Sept. 14. Class 6.

Covey, Luther, doing business as Covey Sheet Metal Works, Holdenville, Okla. Water cans and heat insulated water coolers. Serial No. 513,031, Sept. 14. Class 2.

Covey Sheet Metal Works: *See*—
Covey, Luther.

Covina Orange Growers Association, Covina, Calif. Fresh citrus fruit. Serial No. 539,854, Sept. 14. Class 46.

Crompton Company, Crompton, R. I. Fabrics in the piece composed of cotton, wool, silk, etc. Serial No. 543,105, Sept. 14. Class 42.

Crown Cork & Seal Company, Inc., Baltimore, Md. Packing containers made from glass. Serial No. 543,001, Sept. 14. Class 33.

Dan River Mills, Incorporated, Danville, Va. Cotton piece goods. Serial No. 548,720, Sept. 14. Class 42.

Davis & Catterall, New York, N. Y. Cotton piece goods. Serial No. 531,579, Sept. 14. Class 42.

Davis and Company, Charles C., Chicago, Ill. Twine, string, sash cord, etc. Serial No. 519,179, Sept. 14. Class 7.

Delaware Valley Chemicals, Inc., Easton, Pa. Hand cream. Serial No. 543,146, Sept. 14. Class 6.

Denison Cotton Mill Co., Denison, Tex. Cotton duck. Serial Nos. 550,028–9, Sept. 14. Class 42.

Denison Cotton Mill Co., Denison, Tex. Cotton duck. Serial No. 550,314, Sept. 14. Class 42.

Dewey Portland Cement Company, Kansas City, Mo. Portland cement and masons cement. Serial No. 537,295, Sept. 14. Class 12.

Di Giovanni, Mary, doing business as Royal Kings Row Products, Brooklyn, N. Y. Cleansing cream. Serial No. 531,996, Sept. 14. Class 6.

Diversey Corporation, The, Chicago, Ill. Cleanser in liquid form. Serial No. 513,810, Sept. 14. Class 4.

Diversey Corporation, The, Chicago, Ill. Scale and milkstone deposit remover in powdered form. Serial No. 534,881, Sept. 14. Class 4.

Douglass, Wylie B., doing business as Warner Distributing Co., Chicago, Ill. Candies, viz. Swedish mints. Serial No. 536,879, Sept. 14. Class 46.

Dyer, B. W., & Company, New York, N. Y. Broker in sugar, syrup, and molasses. Serial No. 531,654, Sept. 14. Class 55.

Eagle Pencil Company, New York, N. Y. Ball pointed fountain pens. Serial No. 505,344, Sept. 14. Class 37.

Eaton Laboratories, Inc., Norwich, N. Y. Antacid preparations. Serial No. 552,443, Sept. 14. Class 6.

Eckart, Charles, Company, The: *See*—
Eckart, Charles G.

Eckart, Charles G., doing business as The Charles Eckart Company, Los Angeles, Calif. Mechanically grooved phonograph records. Serial No. 537,794, Sept. 14. Class 36.

Eckhoff, Orville E., doing business as The Cheesteak Company, San Antonio, Tex. Electric combination broiler, grill, and warming oven, and parts thereof. Serial No. 541,523, Sept. 14. Class 21.

Elward Valves, Inc., East Chicago, Ind. Valve stem operating mechanism for fluid control valves. Serial No. 519,383, Sept. 14. Class 13.

Empire Manufacturing Company, Amarillo, Tex. Radio receiving sets. Serial No. 542,300, Sept. 14. Class 21.

Esterbrook Pen Company, The, Camden, N. J. Fountain pens and parts thereof. Serial No. 536,246, Sept. 14. Class 37.

Eugene, Ltd., Brooklyn, N. Y. Electric hair driers, permanent hair waving machines and parts thereof. Serial No. 539,142, Sept. 14. Class 44.

Eugene, Ltd., Brooklyn, N. Y. Hair tint. Serial No. 540,653, Sept. 14. Class 6.

Evans Coffee Co., David G., St. Louis, Mo. Tea, coffee, vanilla extract. Serial No. 517,295, Sept. 14. Class 46.

Exeter Manufacturing Company, Exeter, N. H. Cotton piecegoods. Serial No. 521,803, Sept. 14. Class 42.

Fairy Silk Mills, Shillington, Pa., and New York, N. Y. Tricot and milanese fabrics in the piece. Serial No. 479,384, Sept. 14. Class 42.

Feller-Jones Corporation, New York, N. Y. Moth proofing fluid. Serial No. 549,142, Sept. 14. Class 6.

Firestone Tire & Rubber Company, The, Akron, Ohio. Vehicle suspensions. Serial No. 497,854, Sept. 14. Class 19.

Flour Mills of America, Inc., Kansas City, Mo. Poultry and stock feeds. Serial No. 509,084, Sept. 14. Class 46.

Folker Fabrics Corporation, New York, N. Y. Textile fabrics in the piece, of silk, rayon, and combinations thereof. Serial No. 541,828, Sept. 14. Class 42.

Folker Fabrics Corporation, New York, N. Y. Textile fabrics in the piece, of rayon, silk, and mixtures thereof. Serial No. 542,456, Sept. 14. Class 42.

Forman, W. S., Co.: *See*—

Chemical prepared especially for use on putting greens to banish the worm nuisance. C. B. Dolge Company, Inc. 289,537, Dec. 1, 1931. Republished Sept. 14.
Chemical compounds. Diversey Corporation. 502,071, Sept. 14; Serial No. 527,295, published June 15, 1948.
Chemical compounds, specifically metallic soaps and solution of metallic soaps. Harshaw Chemical Company. 502,181, Sept. 14; Serial No. 545,128, published June 8, 1948.
Chemical products. Arnold, Hoffman & Co., Incorporated. 356,746–9, May 10, 1938. Republished Sept. 14.
Chemical products. Arnold, Hoffman & Co. Incorporated. 379,460, July 9, 1940. Republished Sept. 14.
Chemical products. Arnold, Hoffman & Co. Incorporated. 384,840, Feb. 4, 1941. Republished Sept. 14.
Chemical products. Arnold, Hoffman & Co. Incorporated. 389,031, July 22, 1941. Republished Sept. 14.
Chemical products. Arnold, Hoffman & Co. Incorporated. 406,957–8, May 9, 1944. Republished Sept. 14.
Chemical textile finisher. Hercules Powder Company. 356,328, Apr. 26, 1938. Republished Sept. 14.
Chemical to be added to fire fighting liquid. Arnold, Hoffman & Co., Incorporated. 430,991, July 1, 1947. Republished Sept. 14.
Chemicals, Mixture of. Dixie Chemical Company, Inc. 502,127, Sept. 14; Serial No. 535,307, published June 15, 1948.
Cologne. M. Handman. 500,767, June 29, 1948. Corrected. O. G. Sept. 14.
Coloring products. Arnold, Hoffman & Co., Incorporated. 431,927, Aug. 12, 1947. Republished Sept. 14.
Cosmetic preparation. E. H. Swaim. 440,577, Sept. 14; Serial No. 512,137, published June 8, 1948.

Cosmetics and toilet preparations. Superior Products Company. 502,180, Sept. 14; Serial No. 544,928, published June 8, 1948.
Cream, hand lotion, powder base, Cleansing, etc. M. Gorman. 440,595, Sept. 14; Serial No. 516,128, published June 8, 1948.
Cream, Toilet. F. N. Lewis. 136,514, Nov. 2, 1920. Republished Sept. 14.
Deodorant and germicide. Boyle-Midway Inc. 502,157, Sept. 14; Serial No. 537,972, published June 8, 1948.
Depilatory. Consolidated Royal Chemical Corporation. 502,176, Sept. 14; Serial No. 543,889, published June 8, 1948.
Dermato-therapeutic medication. Doak Company. Incorporated. 502,126, Sept. 14; Serial No. 535,228, published June 8, 1948.
Dyestuffs, Textile. L. L. Keene. 502,192, Sept. 14; Serial No. 546,708, published June 15, 1948.
Ethyl protocatechuic aldehyde. H. H. Fries. 249,714, renewed Nov. 20, 1948. O. G. Sept. 14.
Extract, Hepatic. Harrower Laboratory, Inc. 502,101, Sept. 14; Serial No. 532,451, published June 8, 1948.
Fats, Sulphonated high titre. Hercules Powder Company. 362,445, Nov. 15, 1938. Republished Sept. 14.
Fire extinguishing compounds. Thermet Fire Extinguishers, Inc. 502,066, Sept. 14; Serial No. 526,556, published June 8, 1948.
Flameproofing compounds. Ellicott Laboratories, Inc. 502,163, Sept. 14; Serial No. 538,622, published June 15, 1948.
Fluid for filling cigar and cigarette lighters, Liquid. Bell Chemical Co. 502,183, Sept. 14; Serial No. 545,330, published June 8, 1948.
Fluid, Odorless disinfecting. Slick-Shine Company. 440,574, Sept. 14; Serial No. 511,113, published June 8, 1948.
Germicide and antiseptic. American Cystoscope Makers, Inc. 502,099, Sept. 14; Serial No. 532,091, published June 8, 1948.
Hair dressing. Mennen Company. 430,278–9, June 10, 1947. Republished Sept. 14.
Hair tonic. F. W. Fitch Company. 218,007, Sept. 14, 1926. Republished Sept. 14.
Head cold jelly. Maryland Pharmaceutical Company. 316,295, Aug. 21, 1934. Republished Sept. 14.
Herb remedies, Internal. National Herb Company. 69,592, re-renewed June 23, 1948. O. G. Sept. 14.
Insecticide. Industrial Management Corporation. 440,533, Sept. 14; Serial No. 489,968, published Jan. 14, 1947.
Insecticides. Furst-McNess Company. 502,064, Sept. 14; Serial No. 523,182, published June 15, 1948.
Insecticides. Nourse Oil Company. 300,173, Jan. 10, 1933. Republished Sept. 14.
Insecticides. H. Shapiro. 502,179, Sept. 14; Serial No. 544,469, published June 8, 1948.
Laxative. Upjohn Company. 249,366, renewed Nov. 13, 1948. O. G. Sept. 14.
Laxative and cathartic pills. Consolidated Royal Chemical Corporation. 502,184, Sept. 14; Serial No. 545,347, published June 8, 1948.
Liniment to be applied externally for headaches, colds, coughs, etc. Consolidated Royal Chemical Corporation. 502,185, Sept. 14; Serial No. 545,348, published June 8, 1948.
Lipsticks. Bourjois, Inc. 502,191, Sept. 14; Serial No. 546,350, published June 15, 1948.
Liquid which when sprayed deodorizes and freshens the air, Bottle. Miller Protecto Products Co. 502,050, Sept. 14; Serial No. 500,816, published June 15, 1948.
Lithium salt to be added to cosmetics. Foote Mineral Company. 502,190, Sept. 14; Serial No. 546,211, published June 15, 1948.
Lotion. F. T. Hopkins. 246,014–15, renewed Aug. 28, 1948. O. G. Sept. 14.
Lotion, sun tan oil, and cologne, After shave. Kathryn, Inc. 502,197, Sept. 14; Serial No. 500,961.
Lotion, talcum powder, cold cream, etc., Skin. Jaciel Perfumers, Inc. 244,235, renewed July 17, 1948. O. G. Sept. 14.
Manicure preparations. Houbigant, Inc. 250,915, renewed Dec. 18, 1948. O. G. Sept. 14.
Medical herb specialties. Kräuterpfarrer Johann Künzle Zizers A. G. 440,620, Sept. 14; Serial No. 520,282, published June 15, 1948.
Medicated preparation. Barclay & Barclay. 71,363, re-renewed Nov. 17, 1948. O. G. Sept. 14.
Medicinal preparation. King Manufacturing Company. 402,974, Aug. 24, 1943. Republished Sept. 14.
Medicinal preparation. Eli Lilly and Company. 502,088, Sept. 14; Serial No. 530,740, published June 15, 1948.
Medicinal preparation for the treatment of nutritional deficiencies. Upjohn Company. 502,186, Sept. 14; Serial No. 545,565, published June 8, 1948.
Medicinal preparations. S. Pfeiffer Mfg. Co. 502,076, Sept. 14; Serial No. 528,226, published June 8, 1948.
Medicinal preparations. Reed & Carnrick. 243,916, July 3, 1928. Republished Sept. 14.
Mineral oil product for processing wool fibres. Procter & Gamble Company. 502,193, Sept. 14; Serial No. 548,837, published June 22, 1948.
Nail polish, and bleach, powders, lotions, etc. H. C. Bates. 333,434, Mar. 24, 1936. Republished Sept. 14.
Oatmeal product, Specifically prepared. Mead Johnson & Company. 502,061, Sept. 14; Serial No. 516,930, published June 8, 1948.
Oil. Hercules Powder Company. 368,586, June 27, 1939. Republished Sept. 14.
Oil base textile finishing agent. Hercules Powder Company. 355,912, Apr. 5, 1938. Republished Sept. 14.
Oil, Treated vegetable. Hercules Powder Company. 362,446, Nov. 15, 1938. Republished Sept. 14.
Ointment for minor cuts, scratches, abrasions, etc. Consolidated Royal Chemical Corporation. 502,177, Sept. 14; Serial No. 543,892, published June 8, 1948.
Organic chemicals, Synthetic. Resinous Products & Chemical Company. 432,867, Sept. 16, 1947. Republished Sept. 14.
Oxalic acid, bismarck brown aniline, electric bulb coloring, etc. H. L. Greenbaum. 208,110, Jan. 19, 1926. Republished Sept. 14.
Oxides and salts, Metallic. Vanadium Corporation of America. 244,653, renewed July 24, 1948. O. G. Sept. 14.
Perfume, toilet water, lotion, etc. Houbigant, Inc. 221,886, Dec. 14, 1926. Republished Sept. 14.
Perfume, toilet water, lotion, etc. Houbigant, Inc. 226,004, Mar. 29, 1927. Republished Sept. 14.
Perfumes. Parfums Weil Paris Co. 406,163, Mar. 14, 1944. Republished Sept. 14.
Perfumes. M. Selz. 439,060, July 13, 1948. Corrected. O. G. Sept. 14.
Perfumes. Alfred H. Smith Co. 70,592–3, re-renewed Sept. 15, 1948. O. G. Sept. 14.
Perfumes, eau de cologne, toilet water. Lehn & Fink Products Corporation. 502,174, Sept. 14; Serial No. 543,613, published June 8, 1948.
Perfumes, toilet water, sachet and sachet powders. Parfumerie Houbigant. 158,052, Aug. 22, 1922. Republished Sept. 14.
Perfumes, toilet waters, rouge, etc. Salomon Freres Societe a Responsabilite Limitee. 502,150, Sept. 14; Serial No. 536,889, published June 8, 1948.
Perfumes, toilet waters, sachet and sachet powders. Parfumerie Houbigant. 146,128, Aug. 30, 1921. Republished Sept. 14.
Pharmaceutical preparations. S. Braunstein. 502,212, Sept. 14; Serial No. 522,014.
Plasters, Medicated. Societa Prodotti Chimco Farmaceutici A. Bertelli & Co. 69,497, re-renewed June 16, 1948. O. G. Sept. 14.
Powder and depilatory cream, Depilatory. Hall & Ruckel, Inc. 250,619, renewed Dec. 11, 1948. O. G. Sept. 14.
Powder, Antiseptic dressing. Beebe Laboratories, Inc. 440,531, Sept. 14; Serial No. 486,647, published June 25, 1946.
Powder, Talcum. Mennen Company. 337,361, Aug. 4, 1936. Republished Sept. 14.
Powder, Talcum. Mennen Company. 337,749, Aug. 18, 1938. Republished Sept. 14.
Preparation to be used for the extermination of roaches, silverfish, waterbugs, and crickets. Desoto Chemical Company. 387,988, June 10, 1941. Republished Sept. 14.
Preparation used in the treatment of deep infected wounds and in the treatment of vaginitis, etc. American Cystoscope Makers, Inc. 502,100, Sept. 14; Serial No. 532,092, published June 8, 1948.
Preparation used in the treatment of rheumatism, arthritis, neuritis, etc. Farastan Company. 248,164, renewed Oct. 16, 1948. O. G. Sept. 14.
Remedy for diseases of the kidneys. Reed and Carnrick. 87,808, Aug. 6, 1912. Republished Sept. 14.
Sal soda, and bicarbonate of soda (baking soda). Church & Dwight Co., Inc. 502,069, Sept. 14; Serial No. 526,746, published June 15, 1948.
Sal soda, washing soda, and bicarbonate of soda (baking soda). Church & Dwight Co., Inc. 502,070, Sept. 14; Serial No. 526,790, published June 8, 1948.
Salt, baking powder, and sal soda. Janszen Company. 248,988, renewed Nov. 6, 1948. O. G. Sept. 14.
Salve for external application. Mentholatum Company. 248,543, renewed Oct. 23, 1948. O. G. Sept. 14.
Sodium citrate solutions. Cutter Laboratories. 440,578, Sept. 14; Serial No. 512,390, published June 8, 1948.
Sodium citrate solutions. Cutter Laboratories. 440,579, Sept. 14; Serial No. 512,395, published June 8, 1948.
Solvents, Drain pipe. Merchants Service Corporation. 325,356, June 18, 1935. Republished Sept. 14.
Starch, Powdered laundry. Hubinger Company. 431,942, Aug. 12, 1947. Republished Sept. 14.
Starches and starch derivatives. National Starch Products Inc. 502,067, Sept. 14; Serial No. 526,588, published June 8, 1948.
Sulfate of ammonia, nitrate of soda, ammonium chloride, etc. Barrett Company. 249,691, renewed Nov. 20, 1948. O. G. Sept. 14.
Sulfate of ammonia, nitrate of soda, ammonium chloride, etc. Barrett Company. 249,805, renewed Nov. 20, 1948. O. G. Sept. 14.
Tallow, Highly concentrated sulphonated. Paper Makers Chemical Corporation. 343,923, Mar. 9, 1937. Republished Sept. 14.
Tanning extract, Dry. Barbour Company, Inc. 502,182, Sept. 14; Serial No. 545,209, published June 8, 1948.

Toilet preparations. Wilfred Laboratories, Inc. 250,277, renewed Dec. 4, 1948. O. G. Sept. 14.
Toilet waters. M. Baker. 411,986, Feb. 13, 1945. Republished Sept. 14.
Tonic in tablet form, General vitalizing. E. W. Parker. 249,545, renewed Nov. 20, 1948. O. G. Sept. 14.
Tonic medicines. Consolidated Royal Chemical Corporation. 502,178, Sept. 14; Serial No. 543,895, published June 8, 1948.
Venereal prophylactic preparations. George-Thomas Pharmacal Co. 502,187, Sept. 14; Serial No. 545,791, published June 8, 1948.
Vitamin concentrate in syrup and tablet form. National Institute of Nutrition. 366,190, Apr. 4, 1939. Republished Sept. 14.
Vitamin preparation. A. H. Robins Company. 502,058, Sept. 14; Serial No. 513,771, published June 15, 1948.
Vitamin preparations. World Products Corp. 502,087, Sept. 14; Serial No. 530,697, published June 8, 1948.
Waxes and fats, Emulsified combination of. Hercules Powder Company. 362,444, Nov. 15, 1938. Republished Sept. 14.
Waxes and fats, Emulsified vegetable. Hercules Powder Company. 363,180, Dec. 13, 1938. Republished Sept. 14.

CLASS 8

Cigarette cases. Aristocrat Leather Products, Inc. 502,104, Sept. 14; Serial No. 532,790, published June 15, 1948.
Fans, electric liquid and plastic food mixers, electric space heaters, etc., Electric. A. C. Gilbert Company. 244,834, renewed July 31, 1948. O. G. Sept. 14.
Heaters, electric ventilating fans, electric cigar lighters, etc., Electric space. A. C. Gilbert Company. 244,835, renewed July 31, 1948. O. G. Sept. 14.
Smokers' articles. Brooks Brothers. 502,094, Sept. 14; Serial No. 531,306, published June 22, 1948.

CLASS 10

Fertilizers. Virginia-Carolina Chemical Company. 67,408, Feb. 4, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Company. 67,682, Feb. 11, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Company. 68,321, Mar. 31, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Company. 69,051, May 19, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Company. 69,246, May 26, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Company. 69,764, July 7, 1908. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Corporation. 240,880–1, Apr. 10, 1928. Republished Sept. 14.
Fertilizers. Virginia-Carolina Chemical Corporation. 240,899, Apr. 10, 1928. Republished Sept. 14.
Manure, Pulverized animal. Bachrodt & Company. 245,182, renewed Aug. 7, 1948. O. G. Sept. 14.

CLASS 12

Asphalt rolls, roofing and shingles and roof coating. Boettcher & Kellogg Co. 330,064, Nov. 19, 1935. Republished Sept. 14.
Blocks of stone, sawed and polished, finished blocks of material sold as marble. Breen Stone & Marble Company. 243,656, renewed June 26, 1948. O. G. Sept. 14.
Boards or sheets made wholly or in part of cork. Armstrong Cork & Insulation Company. 250,503, renewed Dec. 11, 1948. O. G. Sept. 14.
Brick. United States Refractories Corporation. 266,875, Feb. 4, 1930. Republished Sept. 14.
Bricks. Streator Brick Company. 204,636, Oct. 20, 1925. Republished Sept. 14.
Bricks. Streator Brick Company. 212,068, Apr. 27, 1926. Republished Sept. 14.
Bricks and blocks and refractory cements, Refractory. McLeod & Henry Co. 246,869, renewed Sept. 18, 1948. O. G. Sept. 14.
Building tile, Glazed and unglazed clay. Clay Products Company, Inc. 243,756, June 26, 1928. Corrected. O. G. Sept. 14.
Cement, Liquid asbestos roofing. Brooks Oil Company. 440,677, Sept. 14; Serial No. 524,945.
Granite, Cut. Cold Spring Granite Company. 224,926, Mar. 8, 1927. Republished Sept. 14.
Houses and parts thereof, Prefabricated. Illinois Lumber Manufacturing Company. 383,785, Dec. 24, 1940. Republished Sept. 14.
Sash and window units, Prefabricated. Lessud Engineering Company. 502,141, Sept. 14; Serial No. 536,101, published June 8, 1948.
Tiles, Colored glass. Semon Bache & Company. 368,971, July 11, 1939. Republished Sept. 14.

CLASS 13

Casters, Slide. Foote, Pierson & Company, Inc. 232,585, Sept. 13, 1927. Republished Sept. 14.
Enameled ware. Standard Sanitary Manufacturing Company. 243,677, renewed June 26, 1948. O. G. Sept. 14.
Kitchen and cooking pots, pans, and kettles, etc., Metal. Polar Ware Company. 244,659, renewed July 24, 1948. O. G. Sept. 14.
Mixers and dispensers, Automatic germicide. National Technical Laboratories. 401,408, May 18, 1943. Republished Sept. 14.
Screening, Wire. American Wire Fabrics Corporation. 246,384, renewed Sept. 4, 1948. O. G. Sept. 14.
Trays of metal other than precious metal, Serving. American Art Works, Inc. 280,213, Feb. 10, 1931. Republished Sept. 14.
Valves, angle valves, cross stop valves, etc., Globe. D. T. Williams Valve Company. 232,850, Sept. 20, 1927. Republished Sept. 14.

CLASS 14

Alloys. Vanadium Corporation of America. 244,654, renewed July 24, 1948. O. G. Sept. 14.
Castings, Iron alloy. Little Brothers Foundry Company. 374,457, Jan. 9, 1940. Republished Sept. 14.
Sheets, bars, blocks, etc., Pure and alloyed aluminum. Sheet Aluminum Corporation. 231,845, Aug. 30, 1927. Republished Sept. 14.

CLASS 15

Chemical releasing agent. R. T. Vanderbilt Company, Inc. 440,636, Sept. 14; Serial No. 522,507, published May 11, 1948.
Gasoline. Sherwood Brothers Incorporated. 245,841, renewed Aug. 21, 1948. O. G. Sept. 14.
Gasoline. Standard Oil Company of California. 440,567, Sept. 14; Serial No. 508,450, published May 25, 1948.
Oil, Lubricating. Fiske Brothers Refining Co. 502,080, Sept. 14; Serial No. 529,372, published June 22, 1948.
Oil, Penetrating. Park Chemical Company. 440,542, Sept. 14; Serial No. 496,652, published May 18, 1948.
Oil, Rust preventing coating. American Chemical Paint Company. 440,629, Sept. 14; Serial No. 521,304, published May 18, 1948.
Oils and greases and kerosene and gasoline, Lubricating. R. J. Brown Company. 294,290, May 24, 1932. Republished Sept. 14.
Oils and greases and kerosene and gasoline, Lubricating. R. J. Brown Company. 296,342, Aug. 2, 1932. Republished Sept. 14.
Oils and greases, Lubricating. Pate Oil Company. 331,162, Dec. 31, 1935. Republished Sept. 14.
Oils, greases, and waxes of all kinds, etc. Vacuum Oil Company. 249,589, renewed Nov. 20, 1948. O. G. Sept. 14.
Oils, Lubricating. Nourse Oil Company. 138,843, Jan. 11, 1921. Republished Sept. 14.

CLASS 16

Coating composition, Liquid resinous. Merchants Chemical Company. 440,593, Sept. 14; Serial No. 515,384, published May 25, 1948.
Coating material in the nature of a paint, Liquid. Missouri Paint & Varnish Co. 502,219, Sept. 14; Serial No. 532,620.
Coatings, Protective. Dolphin Paint & Varnish Co. 440,588, Sept. 14; Serial No. 513,928, published May 25, 1948.
Finish, Liquid. Hillyard Chemical Company. 440,545, Sept. 14; Serial No. 498,770, published May 25, 1948.
Lacquer, Brushing. R. I. Quigley, Jr. 440,555, Sept. 14; Serial No. 505,235, published May 25, 1948.
Lacquers and wood finishes. Interchemical Corporation. 440,576, Sept. 14; Serial No. 511,877, published May 25, 1948.
Oils, High boiling aromatic. Standard Oil Company. 440,544, Sept. 14; Serial No. 498,177, published May 25, 1948.
Paint enamels, Prepared or ready-mixed bronze and. J. F. Kurfees Paint Company. 502,131, Sept. 14; Serial No. 535,556, published May 25, 1948.
Paint, Oil base plastic. Phelan-Faust Paint Mfg. Co. 502,106, Sept. 14; Serial No. 533,364, published May 25, 1948.
Paints, Prepared or ready-mixed liquid. J. F. Kurfees Paint Company. 502,132, Sept. 14; Serial No. 535,557, published May 25, 1948.
Paints, Prepared or ready-mixed liquid. J. F. Kurfees Paint Company. 502,133–4, Sept. 14; Serial Nos. 535,569–70, published May 25, 1948.
Pigments. Interchemical Corporation. 440,596, Sept. 14; Serial No. 516,901, published May 25, 1948.
Plastic material similar to putty. H. L. Greenbaum. 247,505, Sept. 25, 1928. Republished Sept. 14.
Polishes, Piano, auto, furniture, woodwork, and floor. L. G. Smuckler. 440,535, Sept. 14; Serial No. 492,666, published May 25, 1948.
Preparation in the nature of a floor oil or dressing for cleaning, preserving and beautifying wood, etc. Masury-Young Company. 440,627, Sept. 14; Serial No. 520,957, published Nov. 4, 1947.
Wax material, Oxidized. Sun Chemical Corporation. 440,591, Sept. 14; Serial No. 515,134, published May 25, 1948.
Wax, Surface polishing. F. B. Nobrega. 423,947, Sept. 17, 1946. Republished Sept. 14.
Waxes and polishes, Floor. Hecht Co. 440,656, Sept. 14; Serial No. 524,652, published May 25, 1948.
Zinc oxide ground in linseed or similar drying oils. M. J. Merkin Paint Co., Inc. 502,156, Sept. 14; Serial No. 537,808, published June 1, 1948.

CLASS 17

Cigarettes. P. Lorillard Company. 502,153, Sept. 14; Serial No. 536,928, published June 22, 1948.
Cigars. F. D. Grave. 502,063, Sept. 14; Serial No. 517,481, published June 22, 1948.
Cigars. P. Lorillard Company. 502,152, Sept. 14; Serial No. 536,923, published June 22, 1948.
Cigars. Salvador Rodriguez, Inc. 440,615, Sept. 14; Serial No. 519,776, published June 22, 1948.
Cigars. Salvador Rodriguez, Inc. 440,618, Sept. 14; Serial No. 520,058, published June 22, 1948.
Cigars. Tampa-Havana Company. 502,057, Sept. 14; Serial No. 513,277, published June 22, 1948.
Cigars, cigarettes, and tobaccos. Saks & Company. 502,204–5, Sept. 14; Serial Nos. 512,703–4.
Tobacco and cigarettes, Smoking. Moss & Lowenhaupt Cigar Co. 502,148, Sept. 14; Serial No. 536,742, published June 22, 1948.
Tobacco, Chewing. P. Lorillard Company. 502,151, Sept. 14; Serial No. 536,913, published June 15, 1948.
Tobacco, Smoking. Penn Tobacco Company. 502,166, Sept. 14; Serial No. 539,745, published June 8, 1948.
Tobacco, Smoking. H. Sutliff. 249,891, renewed Nov. 20, 1948. O. G. Sept. 14.
Tobacco, Smoking and chewing. Penn Tobacco Company. 502,167–8, Sept. 14; Serial Nos. 539,749–50, published June 15, 1948.
Tobacco, Smoking and chewing. Penn Tobacco Company. 502,169, Sept. 14; Serial No. 539,753, published June 15, 1948.

CLASS 19

Automobiles and accessories, etc. R. R. Birch. 396,581, July 28, 1942. Republished Sept. 14.
Automobiles, automobile wheels, radiators, chassis, etc. A. Saurer. 86,242, Apr. 23, 1912. Republished Sept. 14.
Automotive vehicle braking units. Bendix-Westinghouse Automotive Air Brake Company. 396,467, July 21, 1942. Republished Sept. 14.
Goods-vans, lorries, and passenger road coaches. Commer Cars Limited. 502,211, Sept. 14; Serial No. 516,820.
Wheels for motor-driven vehicles, Steering. Inland Manufacturing Company. 243,941, renewed July 3, 1948. O. G. Sept. 14.

CLASS 21

Amplifiers, Electronic intercommunication. Engineering Enterprises of California. 440,633, Sept. 14; Serial No. 521,867, published June 1, 1948.
Automobile repair and replacement parts. F. & B. Mfg. Co. 440,557, Sept. 14; Serial No. 506,298, published June 1, 1948.
Batteries. National Lead Battery Co. 242,106, May 15, 1928. Republished Sept. 14.
Batteries and parts thereof, Storage. Gould Storage Battery Co., Inc. 243,883, July 3, 1928. Republished Sept. 14.
Batteries, Dry. Burgess Battery Company. 502,165, Sept. 14; Serial No. 539,590, published June 22, 1948.
Batteries, Dry cell electric. Zenith Radio Corporation. 440,658, Sept. 14; Serial No. 524,843, published June 15, 1948.
Batteries, Electric. Bright Star Battery Co. 246,665, renewed Sept. 11, 1948. O. G. Sept. 14.
Batteries, Electric. Bright Star Battery Co. 247,941, renewed Oct. 9, 1948. O. G. Sept. 14.
Batteries, Storage. Nickel Cadmium Battery Corporation. 440,610, Sept. 14; Serial No. 518,004, published June 1, 1948.
Batteries, Storage. Vitalic Battery Company, Inc. 502,056, Sept. 14; Serial No. 513,078, published June 1, 1948.
Brushes, Carbon. Speer Carbon Company. 379,691–2, July 23, 1940. Republished Sept. 14.
Cables, rubber-covered electric conductors, etc., Metal-sheathed electric. Standard Underground Cable Company. 69,871, re-renewed July 14, 1948. O. G. Sept. 14.
Condensers, Electrolytic. Aerovox Corporation. 502,170, Sept. 14; Serial No. 540,233, published June 8, 1948.
Condensers for the radio field, Ceramic. Erie Resistor Corporation. 440,661, Sept. 14; Serial No. 525,574, published June 8, 1948.
Connectors, electric conductors, and electric rail bonds, Electric. Ohio Brass Company. 502,053, Sept. 14; Serial No. 511,412, published June 1, 1948.
Ducts for low potential electrical conductors, Rigid metallic. National Electric Products Corporation. 440,630, Sept. 14; Serial No. 521,529, published June 1, 1948.
Electric-conduit pipe. Central Tube Company. 106,297, Oct. 19, 1915. Republished Sept. 14.
Electric wire, insulated and bare, and electric wire cord sets. Western Insulated Wire Co. 440,638, Sept. 14; Serial No. 522,884, published June 1, 1948.
Electric wire, Plastic coated. Plastoid Corporation. 440,634, Sept. 14; Serial No. 522,104, published June 15, 1948.
Electric wires, cables, and cords. Lenz Electric Manufacturing Co. 502,073, Sept. 14; Serial No. 527,604, published June 1, 1948.
Electrical apparatus. Gregory Electric Company. 502,059, Sept. 14; Serial No. 515,873, published June 15, 1948.
Fixtures, Electric lighting. Earl Lighting Products Corp. 502,144, Sept. 14; Serial No. 536,245, published June 22, 1948.
Frame for holding batteries down. F. E. Brown. 440,530, Sept. 14; Serial No. 486,286, published June 1, 1948.
Heaters, electric ventilating fans, electric cigar lighters, etc., Electric space. A. C. Gilbert Company. 244,835, renewed July 31, 1948. O. G. Sept. 14.
Horns, Electric. E. A. Laboratories, Inc. 502,172, Sept. 14; Serial No. 541,114, published June 15, 1948.
Horns, signals, etc., Electrically operated sounding. Delco-Remy Corporation. 241,441, renewed May 1, 1948. O. G. Sept. 14.
Insulators, Electric. Illinois Electric Porcelain Company. 502,121, Sept. 14; Serial No. 534,442, published June 15, 1948.
Irons, Electric. Yale & Towne Manufacturing Company. 440,598, Sept. 14; Serial No. 517,026, published June 8, 1948.
Irons, Electric steaming. Omar Appliance Manufacturing Company. 502,072, Sept. 14; Serial No. 527,359, published June 22, 1948.
Paper tubing, Spirally laminated. Cleveland Container Company. 502,060, Sept. 14; Serial No. 516,348, published June 8, 1948.
Radio receiving apparatus, electrical talking machines, combination radio receiving apparatus, etc. Zenith Radio Corporation. 440,659, Sept. 14; Serial No. 524,845, published June 15, 1948.
Radio receiving sets. Strawbridge & Clothier. 502,135, Sept. 14; Serial No. 535,648, published June 22, 1948.
Radio receiving sets and radio phonograph combination sets, including cabinets therefor. Magnavox Company. 502,098, Sept. 14; Serial No. 532,039, published June 22, 1948.
Radio receiving sets, and radio phonograph combination sets, including cabinets therefor. Magnavox Company. 502,117, Sept. 14; Serial No. 533,968, published June 22, 1948.
Radio receiving sets and radio phonograph combination sets, including cabinets therefor. Magnavox Company. 502,171, Sept. 14; Serial No. 540,546, published June 15, 1948.
Reels on which are wound cables for carrying electric current to any desirable translating devices. Appleton Electric Company. 502,068, Sept. 14; Serial No. 526,659, published June 1, 1948.
Screw machine products. U. S. Automatic Corporation. 440,529, Sept. 14; Serial No. 486,014, published June 8, 1948.
Signs, Illuminated electric. Trenbath Corporation. 502,114, Sept. 14; Serial No. 533,646, published June 1, 1948.
Sound amplifying and transmitting apparatus, Unitary inter-communicating. Webster Electric Company. 502,201, Sept. 14; Serial No. 509,058.
Sound communication apparatus. California Telephone & Electric Company. 440,619, Sept. 14; Serial No. 520,261, published Jan. 13, 1948.
Sound recordings of the magnetized wire type. L. J. Arms. 440,673, Sept. 14; Serial No. 519,162.
Starting, lighting, and ignition apparatus and parts thereof, Electrical. Delco-Remy Corporation. 241,637, renewed May 1, 1948. O. G. Sept. 14.
Supports and brackets for holding fluorescent lights. E. Schneiderman. 440,631, Sept. 14; Serial No. 521,830, published June 8, 1948.
Switches, manually operated foot switches, rotary switches, etc., Cam lever. General Control Company. 414,105, May 29, 1945. Republished Sept. 14.
Tubes, Cathode ray. Waterman Products Company, Incorporated. 502,124, Sept. 14; Serial No. 534,844, published June 22, 1948.

CLASS 22

Athletic supplies. R. C. Hoffman. 440,564–5, Sept. 14; Serial Nos. 507,824–5, published May 25, 1948.
Bags, Sleeping. Simon Mattress Manufacturing Co. 428,116, Mar. 11, 1947. Republished Sept. 14.
Fish-baits or lures combined with fish-hooks, Artificial. A. A. Gardner. 440,590, Sept. 14; Serial No. 514,702, published May 11, 1948.
Fish hooks and fish lures. Wright & McGill Co. 440,655, Sept. 14; Serial No. 524,641, published Apr. 27, 1948.
Fish lures. Plastic Affiliates, Inc. 440,670, Sept. 14; Serial No. 503,220.
Game boards and parts thereof, game pieces and figure toys. Ateliers Armand Adriaenssens, Societe de personnes à Responsabilité limitée. 440,540, Sept. 14; Serial No. 496,364, published May 25, 1948.
Game employing the use of magnets, Target. Lee Sales Company. 440,566, Sept. 14; Serial No. 508,297, published May 25, 1948.
Games, Board and counter. Essanar Company, Inc. 123,032–3, Oct. 8, 1948. Republished Sept. 14.
Games, Card. E. F. Klauber. 432,127, Aug. 19, 1947. Republished Sept. 14.
Games of a picture-puzzle type. Selchow & Righter Company. 201,300, July 21, 1925. Republished Sept. 14.
Golf accessory. W. Reineking. 440,562, Sept. 14; Serial No. 507,491, published Apr. 13, 1948.

Holder and protector, Fish hook. Gliebe Co. 502,221, Sept. 14; Serial No. 534,768.
Implements, apparatus, and articles used in tennis, golf, etc. Wm. Filene's Sons Company. 266,816, Feb. 4, 1930. Republished Sept. 14.
Skates, Ice and roller. Schmid Brothers. 440,547, Sept. 14; Serial No. 499,155, published June 1, 1948.
Tops, Toy musical. Victory Musical Top Manufacturing Company. 440,548, Sept. 14; Serial No. 499,178, published June 1, 1948.
Toy aeroplanes. Abbo-Craft Company. 502,214, Sept. 14; Serial No. 526,983.
Toy carpet sweepers, toy house cleaning sets and their contents. P. A. Jones. 502,118, Sept. 14; Serial No. 534,022, published May 18, 1948.
Toy musical instruments. Tot-Tested Toys Ltd. 440,546, Sept. 14; Serial No. 498,870, published May 11, 1948.
Toys in the form of miniature house cleaning devices. Norstar Corporation. 440,569, Sept. 14; Serial No. 508,854, published May 11, 1948.
Toys, Inflatable rubber. Hungarian Rubber Goods Factory Limited. 440,614, Sept. 14; Serial No. 519,581, published May 11, 1948.
Toys—namely, model airplanes, model boats, model racing cars, etc. Modelaire, Inc. 440,672, Sept. 14; Serial No. 509,717.
Vehicle in the form of a tricycle, Pedal-type. J. E. Donalson. 440,538, Sept. 14; Serial No. 495,134, published May 11, 1948.

CLASS 23

Apparatus for the treatment of liquids, etc. Dorr Company, Inc. 348,199, July 20, 1937. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 331,471, Jan. 7, 1936. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 332,009, Jan. 28, 1936. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 356,484–5, Apr. 26, 1938. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 356,487, Apr. 26, 1938. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 363,502, Dec. 27, 1938. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 390,978, Oct. 14, 1941. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 395,578, June 2, 1942. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 396,819, Aug. 4, 1942. Republished Sept. 14.
Apparatus for the treatment of solids. Dorr Company, Inc. 400,878, Apr. 6, 1943. Republished Sept. 14.
Apparatus for the treatment of solids suspended in liquids. Dorr Company, Inc. 295,572, July 5, 1932. Republished Sept. 14.
Apparatus for the treatment of solids suspended in liquids. Dorr Company, Inc. 303,107, May 9, 1933. Republished Sept. 14.
Bench legs, Steel. Bond Foundry and Machine Company. 427,423, Feb. 11, 1947. Republished Sept. 14.
Boring machines for boring joist. J. G. Henderson. 80,706, May 28, 1912. Republished Sept. 14.
Conveyors. Syntron Company. 375,846, Mar. 5, 1940. Republished Sept. 14.
Cutters and paper-stock shredders, Paper-stock. Taylor, Stiles & Co. 64,006, re-renewed July 16, 1947. O. G. Sept. 14.
Devices, Electrically driven. Chicago Wheel & Manufacturing Company. 332,938, Mar. 3, 1936. Republished Sept. 14.
Embroidering machines, lace machines, weaving machines, etc. A. Sauber. 87,632, July 30, 1912. Republished Sept. 14.
Fire-extinguishing apparatus, Portable hand. International Fire Equipment Corporation. 250,444, renewed Dec. 11, 1945. O. G. Sept. 14.
Gear units, Speed-reducing. Charles Bond Company. 315,283, July 24, 1934. Republished Sept. 14.
Internal-combustion engines. P. J. Shouvlin. 144,278, June 28, 1921. Republished Sept. 14.
Machinery and parts thereof. Jabez Burns & Sons. 134,160, Aug. 17, 1920. Republished Sept. 14.
Machines. Jabez Burns & Sons, Inc. 311,773, Apr. 3, 1934. Republished Sept. 14.
Machines for grinding, cracking, etc. Jabez Burns & Sons, Inc. 323,171, Apr. 2, 1935. Republished Sept. 14.
Machines for roasting coffee, cocoa, peanuts, etc. Jabez Burns & Sons, Inc. 320,017, Dec. 18, 1934. Republished Sept. 14
Machines for setting glaziers' points. Hubbard & McClary. 245,035, renewed Aug. 7, 1948. O. G. Sept. 14.
Mechanism, Spring operated. McCaffrey Ruddock Tagline Corporation. 400,841, Apr. 6, 1943. Republished Sept. 14.
Milling machines, all-geared universals milling machines, all-geared vertical milling machines, All-geared plain. Kempsmith Manufacturing Co. 219,918, Oct. 26, 1926. Republished Sept. 14.
Milling machines, universal milling machines, vertical [illegible] machines, etc., Plain. Kempsmith Manufacturing Co. 217,526, Aug. 31, 1926. Republished Sept. 14.
Printing machines. Addressograph Company. 70,013, July 21, 1908. Republished Sept. 14.
Pumps, mining machinery, Fluid. United Iron Works. 357,892, June 21, 1938. Republished Sept. 14.
Razor blades. Mennen Company. 311,946, Apr. 10, 1934. Republished Sept. 14.
Roasters and parts and supplies for same. Jabez Burns & Sons. 138,781, Jan. 11, 1921. Republished Sept. 14.
Roasters, and parts and supplies for same. Jabez Burns & Sons. 174,160, Oct. 9, 1923. Republished Sept. 14.
Spray attachments. P. A. Geier Company. 244,174, renewed July 17, 1948. O. G. Sept. 14.
Tools, Gilding. W. H. Coe Manufacturing Company. 70,321, re-renewed Aug. 18, 1948. O. G. Sept. 14.

CLASS 25

Hardware, Automobile body. Ternstedt Manufacturing Company. 244,391, renewed July 17, 1948. O. G. Sept. 14.

CLASS 26

Apparatus for measuring distances. Submarine Signal Corporation. 205,312, Nov. 3, 1925. Republished Sept. 14.
Pens, pencils, pen-racks, etc. Spencerian Pen Co. 32,197, re-renewed Dec. 6, 1948. O. G. Sept. 14.
Sextants, telescopes, binocular glasses, etc. W. F. Stanley and Company Limited. 327,675, Sept. 3, 1935. Republished Sept. 14.
Temperature indicating device. Jabez Burns & Sons, Inc. 286,781, Sept. 1, 1931. Republished Sept. 14.

CLASS 27

Watchcases. Bulova Watch Company, Inc. 210,205, Mar. 9, 1926. Republished Sept. 14.
Watch cases, watch movements and parts. Acon Watch Crown Corp. 440,664, Sept. 14; Serial No. 526,183, published June 8, 1948.
Watches. Bulova Watch Company, Inc. 223,259, Jan. 25, 1927. Republished Sept. 14.
Watches. Bulova Watch Company, Inc. 396,208, June 30, 1948. Republished Sept. 14.
Watches. Bulova Watch Company, Inc. 440,644, Sept. 14; Serial No. 523,740, published June 8, 1948.
Watches. Bulova Watch Company, Inc. 440,645–6, Sept. 14; Serial Nos. 523,744–5, published June 8, 1948.
Watches. Bulova Watch Company, Inc. 440,647, Sept. 14; Serial No. 523,747, published June 8, 1948.
Watches. Bulova Watch Company, Inc. 440,648, Sept. 14; Serial No. 523,755, published June 8, 1948.
Watches. Bulova Watch Company, Inc. 440,650, Sept. 14; Serial No. 523,762, published June 8, 1948.
Watches and watch parts. Bulova Watch Company, Inc. 440,651, Sept. 14; Serial No. 523,764, published June 8, 1948.
Watches, watch cases, and watch movements. Gruen Watch Company. 440,642, Sept. 14; Serial No. 523,523, published June 1, 1948.
Watches, watch movements and parts thereof, and watchcases. Bulova Watch Company, Inc., New York, N. Y. 440,649, Sept. 14; Serial No. 523,758, published June 8, 1948.
Watches, Wrist. Westfield Watch Company, Inc. 265,362, Dec. 24, 1929. Republished Sept. 14.

CLASS 28

Bracelets and watch bracelets, Men's and ladies'. Jacoby-Bender, Inc., New York, N. Y. 440,607, Sept. 14; Serial No. 518,004, published June 8, 1948.
Bracelets, brooches, cuff-links, etc. P. Bios. 440,609, Sept. 14; Serial No. 518,716, published June 8, 1948.
Cuff buttons, shirt studs, vest buttons, etc. Krementz & Co. 99,055, Aug. 11, 1914. Republished Sept. 14.
Diamonds, diamond rings, stone rings, etc. A. A. Friedman. 425,945, Dec. 10, 1946. Republished Sept. 14.
Flat-ware and hollow-ware, Silver-plated. International Silver Company. 502,078, Sept. 14; Serial No. 528,867, published June 8, 1948.

Paneva Corporation, assignee: *See*—
Anderson, Lloyd L., and Hefferan.
Perl, Frederick W., Mansfield, Ohio, assignor to Westinghouse Electric Corporation. Laundry machine. 151,001, Sept. 14.
Pyle, L. L., assignee: *See*—
Kinard, Arthur C.
Raschke, William L., Fort Worth, Tex. Artificial bait. 151,002, Sept. 14.
Rawson, Emanuel, Chicago, Ill. Milking machine claw. 151,003, Sept. 14.
Rawson, Emanuel, Chicago, Ill. Milking machine pulsator. 151,004, Sept. 14.
Regor, J. Edmund, Company: *See*—
Fruit, Edmund W.
Rhodes, Harold B., Hollywood, Calif. Miniature piano. 151,005, Sept. 14.
Rossner, Emery, Brooklyn, N. Y., assignor to Milford Crane & Machine Co., Milford, Conn. Motor power vehicle cab. 151,006, Sept. 14.
Russell, Corey L., Milwaukee, Wis. Lawn sprinkler. 151,007, Sept. 14.
Rycraft, Carl T., Burbank, Calif. Golf bag carrier. 151,008, Sept. 14.
Sawtell, Ella, Portland, Oreg. Hat. 151,009, Sept. 14.
Schuessler Knitting Mills, Inc., assignee: *See*—
Schuessler, Walter E.
Schuessler, Walter E., assignor to Schuessler Knitting Mills, Inc., Chicago, Ill. Cap. 151,010, Sept. 14.
Schuessler, Walter E., assignor to Schuessler Knitting Mills, Inc., Chicago, Ill. Cap. 151,011, Sept. 14.
Schwartz, Frederick, Chicago, Ill. Lamp fixture. 151,012, Sept. 14.
Selrite, Inc., assignee: *See*—
Spence, Edmond J.
Spence, Edmond J., assignor to Selrite, Inc., New York, N. Y. Sewing cabinet. 151,013, Sept. 14.
Square Manufacturing Company, assignee: *See*—
Arnett, Leslie.
Steiner, Ezekiel C., Los Angeles, Calif. Meat cutting machine. 151,014, Sept. 14.
Stiles, Harry L., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Portable electric heater. 151,015, Sept. 14.
Strassner, John F., New York, N. Y. Suit. 151,016, Sept. 14.
Strassner, John F., New York, N. Y. Suit. 151,017, Sept. 14.
Strassner, John F., New York, N. Y. Suit. 151,018, Sept. 14.
Tennessee Enamel Manufacturing Co., assignee: *See*—
Hart, Frederick D.
Theis, Elmer E., assignor to Ace Pump Corporation, Memphis, Tenn. Well pump. 151,019, Sept. 14.
Union-National, Inc., assignee: *See*—
Millspaugh, Cedric E.
Van Dyk, Katharine G., Scarsdale, N. Y. Dental supply kit. 151,020, Sept. 14.
Vosbikian, Peter S. and T. S. Melrose, Pa. Combination mophead unit. 151,021, Sept. 14.
Vosbikian, Thomas S.: *See*—
Vosbikian, Peter S. and T. S.
Weber, Henry J., Franklinville, and D. F. Bennett, Haddonfield, assignors to Warren Webster & Company, Camden, N. J. Baseboard radiator shield unit. 151,022, Sept. 14.
Webster, Warren & Company, assignee: *See*—
Weber, Henry J., and Bennett.
Welsh, James E., assignee et al.: *See*—
Fruit, Edmund W.
Welsh, R. T., assignee et al.: *See*—
Fruit, Edmund W.
Westinghouse Electric Corporation, assignee: *See*—
Perl, Frederick W.
Wood, John N., Media, Pa. Toilet roll receptacle. 151,023, Sept. 14.
Wurlitzer, Rudolph Company, The, assignee: *See*—
Fuller, Paul M.
Zenith Radio Corporation, assignee: *See*—
Budlong, Robert D.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 14TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbrecht, Hermann H., Shaker Heights, assignor to The Osborn Manufacturing Company, Cleveland, Ohio. Trimming machine. 2,449,042, Sept. 14.
Abrams, Armand J., M. H. Gorin, and C. O. Baker, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Manufacture of carbon monoxide and hydrogen from methane. 2,449,359, Sept. 14.
Adams, Harold S., Skowhegan, Maine, assignor to American Woolen Company, New York, N. Y. Ring spinning frame. 2,449,267, Sept. 14.
Adel Precision Products Corp., assignee: *See*—
Kremiller, Arthur E.
Wisegarver, Orton H.
Aeschlimann, John A., Montclair, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Aryl esters of tertiary carbamic acid. 2,449,440, Sept. 14.
Agra, Arthur G., Chicago, Ill. Toilet. 2,449,441, Sept. 14.
Agra, Arthur G., Chicago, Ill. Trailer toilet. 2,449,442, Sept. 14.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Broeg, Charles B., and Balch.
Goldthwait, Charles F., and Smith.
McGovran, Edward R., Mayer, and Talley.
Tanner, Fred W., Jr., and Van Lanen.
Air Reduction Company, Incorporated, assignee: *See*—
Heldbrink, Jay A.
Aircraft-Marine Products, Inc., assignee: *See*—
Carlson, Vernon E.
Aktiengesellschaft Brown, Voveri & Cie, assignee: *See*—
Eichenberger, Ernst.
All American Aviation, Inc., assignee: *See*—
Schultz, Arthur B.
Allen, Harry L., and G. J. Skriver, Philadelphia, Pa., assignors to Allied Chemical & Dye Corporation, New York, N. Y. Making oils from acid sludges resulting from the sulfuric acid purification of coal tar distillates. 2,449,098, Sept. 14.
Allied Chemical & Dye Corporation, assignee: *See*—
Allen, Harry L., and Skriver.
Allmänna Svenska Elektriska Aktiebolaget, assignee: *See*—
Lamm, Uno.
Allphin, Willard J., Danvers, Mass., assignor to Sylvania Electric Products, Inc., Salem, Mass. Electric lamp. 2,449,268, Sept. 14.
Altman, Otto, Port Chester, N. Y. Safety transmission for vending machines and the like. 2,449,043, Sept. 14.
American Bosch Corporation, assignee: *See*—
Lamphere, Richard W.
American Brake Shoe Company, assignee: *See*—
Magnus, Oscar F.
American Seating Company, assignee: *See*—
Nordmark, Walter E.
American Steel Foundries, assignee: *See*—
Lehrman, Leo A.
American Vitos Company, Inc., assignee: *See*—
Vitoux, Marcel.
American Woolen Company, assignee: *See*—
Adams, Harold S.
Anderson, Arthur A., Rose Township, Ramsey County, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Automatic adhesive tape dispenser. 2,449,047, Sept. 14.
Anderson, Gustave A., assignor to The International Handkerchief Mfg. Co., New York, N. Y. Blank feeder means. 2,449,044, Sept. 14.
Armistead, William H., assignor to Corning Glass Works, Corning, N. Y. Glass having low power factor. 2,449,099, Sept. 14.
Athans, Francis P., Fort Worth, Tex. Expansible fish-hook. 2,449,045, Sept. 14.
Attorney General of the United States: *See*—
Lautenschlager, Carl L., and Lindner.
Wolff, Hanns-Heinz.
Austin, Bascom O.: *See*—
Killian, Orvel G., and Austin.
Austin, Ellsworth W., assignor to La Plant-Choate Manufacturing Co., Inc., Cedar Rapids, Iowa. Selective hydraulic control structure. 2,449,269, Sept. 14.
Austin, Paul R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of highly halogenated fluoroalkanes. 2,449,360, Sept. 14.
Automotive Products Company, Limited, assignee: *See*—
Hayman, Bernard M.
Autophone Aktiengesellschaft, assignee: *See*—
Tschumi, Otto.
Avco Manufacturing Corporation, assignee: *See*—
Leydorf, George F.
Axe, Roy T., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y. Window construction. 2,449,361, Sept. 14.
Ayerst, McKenna & Harrison Limited, assignee: *See*—
Strean, Lyon P.
Bahan, William H., Greenville, S. C. Driving means for looms. 2,449,157, Sept. 14.
Bailey Meter Company, assignee: *See*—
Johnson, Clarence.
Baird, Hugh S.: *See*—
Kolehmainen, Elmar, and Baird.
Baker, Edgar B.: *See*—
Gloss, Gunter H., and Baker.
Baker, Ovid C.: *See*—
Abrams, Armand J., Gorin, and Baker.
Balch, Royal T.: *See*—
Broeg, Charles B., and Balch.
Banyai, M., Limited, assignee: *See*—
Banyai, Maurus.
Banyai, Maurus, assignor to M. Banyai Limited, Glasgow, Scotland. Needle frame for gauze weaving looms. 2,449,100, Sept. 14.
Barley, Lyndle W., Colorado Springs, Colo. Multiple unit freezer cabinet. 2,449,101, Sept. 14.
Barnes, Wilbur L., and J. J. Harrison, assignors to Michigan Carton Company, Battle Creek, Mich. Dispensing container. 2,449,046, Sept. 14.
Bastian-Blessing Company, The, assignee: *See*—
Fredrick, Raymond R.
Bausch & Lomb Optical Company, assignee: *See*—
Frost, Wright W.
Wittig, Carl H. O.
Bayley, Abraham: *See*—
Mueller, Fritz W. H., and Bayley.
Beager, Arthur and E. W., New York, N. Y. Vacuum cleaner bag. 2,449,102, Sept. 14.
Beager, Elizabeth W.: *See*—
Beager, Arthur and E. W.
Beam, Chester F., Niagara Falls, Ontario, Canada. Automobile sanding device. 2,449,525, Sept. 14.
Beaver Tool & Engineering Corp., assignee: *See*—
Cherry, Charles A.
Behrens, Otto K., assignor to Eli Lilly and Company, Indianapolis, Ind. Phenacetylaminomethylcrotonic acid. 2,449,191, Sept. 14.
Behrens, Otto K., and Q. F. Soper, assignors to Eli Lilly and Company, Indianapolis, Ind. N-alkenyl phenylacetamides. 2,449,192, Sept. 14.
Behrens, Otto K., R. G. Jones, and Q. F. Soper, assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture medium for producing penicillin. 2,449,193, Sept. 14.
Behrens, Otto K., and J. W. Corse, assignors to Eli Lilly and Company, Indianapolis, Ind. N-dihydroxypropyl phenylacetamide. 2,449,194, Sept. 14.
Behrens, Otto K., and J. W. Corse, assignors to Eli Lilly and Company, Indianapolis, Ind. Process and culture media for producing penicillin. 2,449,195, Sept. 14.
Belchetz, Arnold, Larchmont, N. Y., assignor to Stauffer Chemical Company. Production of sulfur trioxide. 2,449,190, Sept. 14.
Bell, James R., La Grange, Ill., L. D. Stacy, Burkburnett, Tex., and I. E. Dischinger, Jr., Berwyn, Ill., assignors to General Motors Corporation, Detroit, Mich. Explosion-proof lamp. 2,449,362, Sept. 14.
Bell Products Corporation, assignee: *See*—
Sebell, Harry.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Clayden, Francis W.
Goodall, William M.
Houghton, Edward W.
Bendixen, Palle N., Copenhagen, Denmark. Device for transforming direct current into alternating current or vice versa. 2,449,048, Sept. 14.
Bennett, Charles E., Ridgewood, N. J. Apparatus for protecting inflammable liquids against fire. 2,449,270, Sept. 14.
Bennett, Charles E., Ridgewood, and P. V. White, Rochelle Park, assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Joint structures for cables. 2,449,271, Sept. 14.
Bent, George R., Northbrook, assignor, by mesne assignments, to Consolidated Cosmetics, Chicago, Ill. Powder box having sealing ring. 2,449,196, Sept. 14.
Bentley, Frank B.: *See*—
Doane, Lewis B., and Bentley.
Benyak, John B., assignor to The Osborn Manufacturing Company, Cleveland, Ohio. End brush and making. 2,449,158, Sept. 14.

Benziger, Alfred B., Chicago, Ill. Tube holder. 2,449,197, Sept. 14.

Berch, Samuel H., Beverly Hills, assignor to The Flexible Vacuum Container Corporation, Los Angeles, Calif. Vacuum sealing flexible packages. 2,449,272, Sept. 14.

Bernhard, Richard, assignor to Traylor Engineering & Manufacturing Company, Allentown, Pa. Riding ring mounting for rotary cylinders. 2,449,198, Sept. 14.

Bernstein, Herman, assignee et al.: *See*—
Warner, Samuel W.

Bettler, Philip, Boston, and H. D. Doolittle, Cambridge, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War. Line pulse modulator for multichannel transmitters. 2,449,443, Sept. 14.

Bigwood, Joshua, & Son Limited, assignee: *See*—
Pope, Alfred.

Bisso, Nino, New York, N. Y. Adjustable flexible band. 2,449,273, Sept. 14.

Black, Eric A., Red Bank, N. J. Adjustable support. 2,449,049, Sept. 14.

Blackburn, Wayne E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Selenium rectifier. 2,449,444, Sept. 14.

Blair, Homer E., McCool, Ind. Switch lever stop. 2,449,363, Sept. 14.

Blankart, André, Basel, Switzerland, assignor to Hoffman-La Roche Inc., Nutley, N. J. Process for isolating vanillin. 2,449,364, Sept. 14.

Blankenbuehler, John H.: *See*—
Croco, Charles P., and Blankenbuehler.

Bober, Walter F., Cleveland, and F. E. Sebring, Mount Gilead, Ohio, assignors to The Hydraulic Development Corp., Inc., Wilmington, Del. Apparatus for forging. 2,449,365, Sept. 14.

Bodan, Herman, Milwaukee, Wis. Flush tank drip pan. 2,449,445, Sept. 14.

Boes, W. W., Company, The, assignee: *See*—
Boes, Walter W.

Boes, Walter W., assignor to The W. W. Boes Company, Dayton, Ohio. Film tank. 2,449,199, Sept. 14.

Boggis, Henry P., Shaker Heights, Ohio. Tap driver. 2,449,103, Sept. 14.

Bolleau, Arthur H., Cedar Rapids, Iowa, assignor to Cherry-Burrell Corporation, Wilmington, Del. Churn support. 2,449,446, Sept. 14.

Bond, George R., Jr., Paulsboro, N. J., and G. A. Mills, Ridley Park, Pa., assignors to Houdry Process Corporation, Wilmington, Del. Catalytic conversion of hydrocarbons with a cerium phosphate catalyst. 2,449,050, Sept. 14.

Boucher, Roger, Hull, Quebec, Canada. Bicycle rear light control. 2,449,200, Sept. 14.

Bowen Research Corporation, assignee: *See*—
Bowen, William S., and McCrum.

Bowen, William S., Westfield, and W. I. McCrum, Belmar, assignors to Bowen Research Corporation, Garwood, N. J. Vibrating conical discharge means for spray driers. 2,449,366, Sept. 14.

Boyajian, Aram, Pittsfield, Mass., assignor to General Electric Company. Tapped transformer system. 2,449,367, Sept. 14.

Bradley, John S., North Attleboro, Mass., and N. H. Smith, Pawtucket, assignors to Hemphill Company, Central Falls, R. I. Yarn take-up. 2,449,105, Sept. 14.

Brailsford, Robert E.: *See*—
Kischitz, Alexander D., Gochenour, and Brailsford.

Breth, Ferdinand W., and A. Kinsel, Petrolia, Pa., assignors to L. Sonneborn Sons, Inc. Liquid phase refining of petroleum hydrocarbon products. 2,449,051, Sept. 14.

Bridwell, Chalon E., Detroit, Mich. Valve cage. 2,449,106, Sept. 14.

Briggs Manufacturing Company, assignee: *See*—
Lyijynen, Fred.
Pattison, Herbert J.

Broeg, Charles B., and R. T. Balch, Houma, La., assignors to United States of America as represented by the Secretary of Agriculture. Making refined sugarcane wax. 2,449,107, Sept. 14.

Broll, Harry R., assignor to Fuld Bros., Inc., Baltimore, Md. Self-indicating quaternary ammonium bactericidal composition. 2,449,274, Sept. 14.

Brooks Bank Note Company, assignee: *See*—
Lambert, Russell A.

Brooks, Richard E.: *See*—
Gresham, William F., and Brooks.

Brooks, Richard E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of ether esters. 2,449,447, Sept. 14.

Brown & Bigelow, assignee: *See*—
Gruber, Francis E.

Brown Fintube Company, assignee: *See*—
Brown, John W., Jr.

Brown, Henry L., Seattle, Wash. Apron. 2,449,448, Sept. 14.

Brown Instrument Company, The, assignee: *See*—
Harrison, Thomas R.

Brown, John W., Jr., Lakewood, assignor to Brown Fintube Company, Elyria, Ohio. Heat exchanger. 2,449,052, Sept. 14.

Brown, Louis B., Duquesne, Pa. Tool holder. 2,449,368, Sept. 14.

Brown, Theophilus, assignor to Deere & Company, Moline, Ill. Tractor cultivator. 2,449,159, Sept. 14.

Brush Development Company, The, assignee: *See*—
Jaffe, Hans.

Bugatti, Ettore, Paris, France. Milling machine. 2,449,449, Sept. 14.

Burcham, Milo, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Facilitating the feathering of propellers responsive to yaw control. 2,449,104, Sept. 14.

Burndy Engineering Company, Inc., assignee: *See*—
Paucek, Andrew J.
Rogoff, Julian.

Burns, Fred J., Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y. Holddown bracket. 2,449,275, Sept. 14.

Burns, Henry L., Yellow Springs, Ohio, and J. H. Thomas, Minneapolis, Minn. Leak detector. 2,449,053, Sept. 14.

Buss, Hadley N., Detroit, Mich. Planer construction. 2,449,201, Sept. 14.

Butterfield, Harry: *See*—
Pityo, Albert F., Butterfield, and Warner.

California Research Corporation, assignee: *See*—
Miller, Robert J.

Cantlin, John H., North Andover, Mass. Fluid mass measuring device. 2,449,054, Sept. 14.

Cardox Corporation, assignee: *See*—
Williamson, Hilding V.

Carlock, George P., Jersey City, N. J. Hand operated leather punching machine. 2,449,108, Sept. 14.

Carlson, Vernon E., Short Hills, assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J. Electrical connector. 2,449,450, Sept. 14.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Vickroy, George S.

Carson, Clifford C., Washington, D. C., Flash steam eliminator. 2,449,055, Sept. 14.

Cassen, Benedict, Los Angeles, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-frequency dielectric heating apparatus. 2,449,451, Sept. 14.

Castle, James B., Oakland, assignor to Reconstruction Finance Corporation, San Francisco, Calif. Vehicle mounted front end loader. 2,449,160, Sept. 14.

Caterpillar Tractor Co., assignee: *See*—
Johnson, Lloyd E.

Celanese Corporation of America, assignee: *See*—
Santoro, Ovid, and Jaskot.

Chalos, Marcel, Paris, France. Pretensioned reinforcement. 2,449,276, Sept. 14.

Cherry-Burrell Corporation, assignee: *See*—
Bolleau, Arthur H.

Cherry, Charles A., Berkley, assignor to Beaver Tool & Engineering Corp., Royal Oak, Mich. Quick lock toolholder. 2,449,277, Sept. 14.

Chicksan Tool Company, assignee: *See*—
Phillips, Dwight M.

Chilton, Charles W., Clifton, N. J., assignor to Curtiss-Wright Corporation. Propeller governor. 2,449,452, Sept. 14.

Ciba Pharmaceutical Products Inc., assignee: *See*—
Miescher, Karl, and Klarer.

Cieslak, Leo, Salem, Oreg. Conveyer. 2,449,278, Sept. 14.

Clapp, Richard H., Danvers, assignor to Sylvania Electric Products, Inc., Salem, Mass. Copper oxide rectifier. 2,449,453, Sept. 14.

Clark, Albert R., and R. J. Kittle, assignors to The De Vilbiss Company, Toledo, Ohio. Spray booth. 2,449,203, Sept. 14.

Clark, Howard H., Kent, Ohio. Safety scaffold pole. 2,449,056, Sept. 14.

Clark, J. L., Manufacturing Co., assignee: *See*—
Ekstrom, Ted M.

Clark, John T.: *See*—
Johnson, Carroll W., and Clark.

Clauson, Lynn G., assignee, et al.: *See*—
Haight, Clarence R.

Clayden, Francis W., Bronxville, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical testing device. 2,449,057, Sept. 14.

Coes, Loring, Jr., Brookfield, assignor to Norton Company, Worcester, Mass. Plasticizing and vulcanization of butadiene-acrylic nitrile copolymer. 2,449,058, Sept. 14.

Coleman, Maurice, assignee: *See*—
Kertz, James J.

Coleman-Pettersen Corporation, assignee: *See*—
Pettersen, Wilber E.

Collins Radio Company, assignee: *See*—
May, Richard W.
Sansbury, George L.

Columbia Mills, Inc., assignee: *See*—
Burns, Fred J.

Compo Shoe Machinery Corporation, assignee: *See*—
Pitman, Earle C.
Pitman, Earle C., and Crandell.
Small, Edward F.

Conklin, Johnie E., Oakland, Calif. Power shovel. 2,449,279, Sept. 14.

Consolidated Cosmetics, assignee: *See*—
Bent, George R.

Cooke, Theodore C., Swampscott, Mass. Drop hammer. 2,449,454, Sept. 14.

Corning Glass Works, assignee: *See*—
Armistead, William H.

Corse, Joseph W.: *See*—
Behrens, Otto K., and Corse.

Costello, Frank E., Philadelphia, Pa. Bullet loosening improvements in cartridge disassembling machines. 2,449,059, Sept. 14.

Coulthard, William, Scotby, near Carlisle, England. Die casting machine. 2,449,280, Sept. 14.

Crabtree, Ernest, Toronto, Ontario, Canada. Adapter for spot welding machines. 2,449,455, Sept. 14.

Craig, Ralph P., Los Angeles, and J. W. Norgauer, Hollywood, Calif. Bottle capper. 2,449,161, Sept. 14.

Crandell, Ervin L.: *See*—
Pitman, Earle C., and Crandell.

Crane, Raymond E.: *See*—
Pieslak, Joseph W., and Crane.

Croco, Charles P., Buffalo, N. Y., and J. H. Blankenbuehler, Troy, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Arc welding control system. 2,449,456, Sept. 14.

Curtis, Charles G., Brea, Calif. Display page for coins and other objects. 2,449,204, Sept. 14.

Curtiss-Wright Corporation, assignee: *See*—
Chilson, Charles W.
Dean, George A.
Jerger, Joseph.

Daigle, Herbert D., Providence, R. I. Fluid draining device. 2,449,060, Sept. 14.

Dalton, Frank L., Ironto, Va. Sponge cleaning device. 2,449,281, Sept. 14.

Darling, Samuel M., assignor to The Standard Oil Company, Cleveland, Ohio. Conversion of hydrocarbons in the presence of a catalyst comprising alumina and an oxyfluoride of beryllium, titanium or zirconium. 2,449,061, Sept. 14.

Daven Company, The, assignee: *See*—
Naef, Alfred H.

Day, Herbert O., Bowling Green, Ohio. Hydraulic actuating mechanism for dump trucks. 2,449,202, Sept. 14.

Dean, George A., Radburn, N. J., assignor to Curtiss-Wright Corporation. Deicing system for propeller blades. 2,449,457, Sept. 14.

Decca Record Company, Limited, The, assignee: *See*—
O'Brien, William J.

Deere & Company, assignee: *See*—
Brown, Theophilus.

Degnan, James M., trustee: *See*—
Hoffer, Frank W.

D'Emilio, Oreste, Nutley, N. J. Hair drier. 2,449,205, Sept. 14.

Dentists' Supply Company of New York, The, assignee: *See*—
Whittemore, Winthrop C.

Designers for Industry, Inc., assignee: *See*—
Green, Lee B.

Detroit Lubricator Company, assignee: *See*—
Landon, Walter S.

Detroit Steel Products Company, assignee: *See*—
Gillett, William, and Miller.

Dettmer, Edward V.: *See*—
Wiley, Ralph M., and Dettmer.

De Vilbiss Company, The, assignee: *See*—
Clark, Albert R., and Kittle.

Dewey, Edward B., Washington, D. C. Agricultural machine. 2,449,062, Sept. 14.

Dickenson, Haydn G., Warrington, assignor to Ward, Blenkinsop & Company Limited, London, England. Process for the production of cyclic lactones. 2,449,162, Sept. 14.

Dickman, Calvin H., Brewster, Minn. Manually operated vegetable slicer. 2,449,282, Sept. 14.

Dike, Paul H., Jenkintown, and E. D. Doyle, assignors to Leeds and Northrup Company, Philadelphia, Pa. Recorder with magnetically positioned electric indicator. 2,449,283, Sept. 14.

Dischinger, Irvin E., Jr.: *See*—
Bell, James R., Stacy, and Dischinger.

Doane, Lewis B., and F. B. Bentley, New London, assignors to Electric Boat Company, Groton, Conn. Flexible metal hose. 2,449,369, Sept. 14.

Dole Refrigerating Company, assignee: *See*—
Kleist, Herman W.

Domonkas, Richard J., Barberton, Ohio. Quick action switch. 2,449,109, Sept. 14.

Donnelly, Thomas S., Detroit, Mich. Electrode holder. 2,449,370, Sept. 14.

Doolittle, Howard D.: *See*—
Bettler, Philip, and Doolittle.

Dorman, Edward A., New Rochelle, N. Y. Machine tool adapter. 2,449,284, Sept. 14.

Dow Chemical Company, The, assignee: *See*—
Wiley, Ralph M., and Dettmer.

Doyle, Edgar D.: *See*—
Dike, Paul H., and Doyle.

Dryden, Nathaniel C., Poughkeepsie, N. Y. Glass building block. 2,449,458, Sept. 14.

Dryer, Eldon O., Richmond, and A. H. Meisenheimer, Jr., Berkeley, Calif. Apparatus for rolling steel barrel chimes. 2,449,206, Sept. 14.

Dunne, James J., Westport, Conn., and O. S. Tuttle, New Rochelle, assignors to United States Plywood Corporation, New York, N. Y. Process for manufacturing plywood tubing. 2,449,526, Sept. 14.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Austin, Paul R.
Brooks, Richard E.
Ford, Thomas A.
Gresham, William F.
Gresham, William F., and Brooks.
Larson, Alfred T.
Schroeder, Herman E.
Sharkey, William H.
Vannoy, Wesley G.

Dutch, Emery, New York, N. Y. Method and means for welding pipes and the like. 2,449,371, Sept. 14.

Earle, Guyon L. C., Forest Hills, N. Y., assignor to H. S. Wertz, trustee for the beneficiaries of the Earle Patents Trust. Sound deadener device. 2,449,207, Sept. 14.

Earle Patents Trust, Trustee for the beneficiaries of the: *See*—
Earle, Guyon L. C.

Earley, Roy C.: *See*—
Kimball, James L., and Earley.

Eckert, Theodore, Lincolnwood, assignor to Harig Manufacturing Company, Chicago, Ill. Perforator grinding fixture. 2,449,459, Sept. 14.

Edgar, David: *See*—
Knowlton, Cutler D., and Edgar.

Edgerton, Harold E., Belmont, Mass. Electric system. 2,449,063, Sept. 14.

Edwards, Geraldine K., Napoleon, and M. H. Zachrich, Defiance, Ohio. Hearing aid and heat deflector for hair driers. 2,449,460, Sept. 14.

Edwards, O. M., Company, Inc., The, assignee: *See*—
Axe, Roy T.

Eells, Paul W., assignor to Le Roi Company, West Allis, Wis. Cooling system for internal-combustion engines. 2,449,110, Sept. 14.

Eglinton, George F., Lincoln Park, and D. J. Woodworth, Detroit, assignors to Lincoln Park Industries, Inc., Lincoln Park, Mich. Compensating abrasive wheel dressing machine. 2,449,372, Sept. 14.

Eichenberger, Ernst, Wettingen, assignor to Aktiengesellschaft Brown, Boverie & Cie, Baden, Switzerland. Circuit breaker. 2,449,208, Sept. 14.

Ekstrom, Ted M., assignor to J. L. Clark Manufacturing Co., Rockford, Ill. Rotary sifter top. 2,449,285, Sept. 14.

Electric Boat Company, assignee: *See*—
Doane, Lewis B., and Bentley.

Elcon Company, The, assignee: *See*—
Mersereau, Everard C.

Elliott, Daniel R., and K. K. Madison, Detroit, Mich., assignors to United States Rubber Company, New York, N. Y. Tire curing bag. 2,449,461, Sept. 14.

Eltron, Inc., assignee: *See*—
Gelzer, John R.

Engle, Emmet R., Berwyn, Ill. Fermenting whey. 2,449,064, Sept. 14.

English Electric Company Limited, The, assignee: *See*—
Hopper, Stanley D., and Hassler.

Erie Resistor Corporation, assignee: *See*—
Minnium, Byron B.

Erisman, Adolph C., Port Richmond, assignor to L. Kushner, doing business as the Metropolitan Mechanical Display Company, New York, N. Y. Display device embodying hinged or pivoted members simulating book leaves. 2,449,462, Sept. 14.

Evering, Bernard L., Chicago, Ill., and A. P. Lien, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Hydrocarbon conversion process. 2,449,463, Sept. 14.

Expanded Rubber Company Limited, assignee: *See*—
Kirby, Richard A.

Eypper, George W., Montclair, N. J. Cord adjusting and storage device. 2,449,464, Sept. 14.

Fairbairn, Alasdair W., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Production of 1,3-dihalopropylenes. 2,449,286, Sept. 14.

Fairbanks, Morse & Co., assignee: *See*—
Hobart, Franklin G.

Falge, Robert N., and W. T. Mears, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Lamp conductor contact. 2,449,373, Sept. 14.

Farber, Eduard and M. S., assignors to Timber Engineering Company, Washington, D. C. Improving chemical reactivity and adsorptive capacity of lignin from wood saccharification. 2,449,209, Sept. 14.

Farnsworth, Harry E.: *See*—
Witherby, Thomas H., and Farnsworth.

Faust, Charles C., Lake Charles, La. Automobile door glass channel retainer. 2,449,210, Sept. 14.

Fennema, Pieter H., J. G. Kronouer, and F. Prakke, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electric discharge tube base. 2,449,374, Sept. 14.

Ferguson, Frederick G., Shaker Heights, and R. C. Thompson, Cleveland Heights, Ohio, assignors to Simplex Piston Ring Mfg. Company. Shaft seal. 2,449,375, Sept. 14.

Flaker, Jacob E., Barberton, Ohio. Floor mat. 2,449,465, Sept. 14.

Flexible Vacuum Container Corporation, The, assignee: *See*—
Berch, Samuel H.

Flood, Merrill M., Washington, D. C. Polarizing beam-splitting prism. 2,449,287, Sept. 14.

Flowers, Leola W.: *See*—
Flowers, Ralph G. and L. W.

Flowers, Ralph G. and L. W., Pittsfield, Mass., assignors to General Electric Company. Polymers of monovinylphenoxthines and preparing the same. 2,449,527, Sept. 14.

Flowers, Ralph G. and L. W., Pittsfield, Mass., assignors to General Electric Company. Copolymers of monovinylphenoxthines and preparing the same. 2,449,528, Sept. 14.

Flud Bros., Inc., assignee: *See*—
Broll, Harry R.

Flugstad, John B., assignee, et al.: *See*—
Haight, Clarence R.

Fockler, Theodore C.: *See*—
Ludwig, Leon R., Fockler, and Formhals.

Ford, Thomas A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. The preparation of alpha, alpha-dialkyl beta-chloropropionic acids. 2,449,163, Sept. 14.

Formhals, William H.: *See*—
Ludwig, Leon R., Fockler, and Formhals.

Forsyth, Joseph H., Santa Ynez, Calif. Bookmark. 2,449,211, Sept. 14.

Foster, Arnold L., Brooklyn, N. Y. Design-mold for treating fur. 2,449,111, Sept. 11.

Fraga, Frank M., Fresno, Calif. Tractor scoop. 2,449,212, Sept. 14.

Frank Prox Company, Inc., assignee: *See*—
Fluke, Frank L.

Fredrick, Raymond R., assignor to The Bastian-Blessing Company, Chicago, Ill. Telltale control switch. 2,449,213, Sept. 14.

Free, Charles H.: *See*—
Gordon, Hiram, and Free.

Freinkel, Leonard, Washington, D. C. Control systems for synchronous motors. 2,449,065, Sept. 14.

Friedman, Herbert, Arlington, Va. Analysis by fluorescent X-ray excitation. 2,449,066, Sept. 14.

Frost, Wright W., Knoxville, Tenn., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Object holder for opaque picture projectors. 2,449,112, Sept. 14.

Fruth, Hal F., Skokie, Ill. Electric discharge device. 2,449,113, Sept. 14.

Fulke, Frank L., assignor to Frank Prox Company, Inc., Terre Haute, Ind. Coal cutting bit and holder therefor. 2,449,288, Sept. 14.

Gahagan, Orren M., Dallas, Tex. Cathead. 2,449,376, Sept. 14.

Garey, Sanford H., Uvalde, Tex. Axially shifting hydraulic rim and tire separating device. 2,449,289, Sept. 14.

Gash, Abram D., Jr., Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y. Coupling device for use in toy railroads. 2,449,466, Sept. 14.

Gavriles, Pete, Laurel, Md. Bottle cap. 2,449,290, Sept. 14.

Gay, Paul S., assignor to Wilcox-Gay Corporation, Charlotte, Mich. Recording apparatus volume level indicator. 2,449,291, Sept. 14.

Gebauer, Charles L., assignor to The Gebauer Chemical Company, Cleveland, Ohio. Lubricating composition. 2,449,114, Sept. 14.

Gebauer Chemical Company, The, assignee: *See*—
Gebauer, Charles L.

Geigy, J. R., A. G., assignee: *See*—
Krebser, Adolf, and Kuster.

Gelzer, John R., assignor to Eltron, Inc., Jackson, Mich. Voltage multiplying vibrator apparatus. 2,449,214, Sept. 14.

General Aniline & Film Corporation, assignee: *See*—
Heimbach, Newton, and Kelly.
Mueller, Fritz W. H., Bayley.

General Electric Company, assignee: *See*—
Boyajian, Aram.
Flowers, Ralph G. and L. W.
Kogane, León.
Rich, Theodore A.
Whitman, Lawrence C.
Winchester, Clark E., and Lathrop.

General Motors Corporation, assignee: *See*—
Bell, James R., Stacy, and Dischinger.
Falge, Robert N., and Mears.
Lillquist, Torsten O.
McDougal, Taine G.
Van Degrift, Thomas C., Zmuda, and Riopelle.
Wittlinger, Leonard M.

General Time Instruments Corporation, assignee: *See*—
MacLean, John B., and Schlenker.

Gerry, William R.: *See*—
Shakespeare, Henry G., and Gerry.

Gillett, William, Grosse Pointe Park, and E. A. Miller, assignors to Detroit Steel Products Company, Detroit, Mich. Building structure. 2,449,292, Sept. 14.

Glass Fibers, Inc., assignee: *See*—
Stevens, Charles R.

Gloss, Gunter H., Redwood City, and E. B. Baker, Burlingame, assignors to Marine Magnesium Products Corporation, San Francisco, Calif. Production of magnesium compounds. 2,449,293, Sept. 14.

Gochenour, Carl I.: *See*—
Kischitz, Alexander D., Gochenour, and Brailsford.

Goldthwait, Charles F., and H. O. Smith, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture. Producing cotton cordage. 2,449,215, Sept. 14.

Goodall, William M., Oakhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Communication system employing pulse code modulation. 2,449,467, Sept. 14.

Goodman Manufacturing Company, assignee: *See*—
Hagenbook, Loy D.

Goodrich, B. F., Company, The, assignee: *See*—
Hunter, Willson H.
Krupp, Carroll P.
Slemmons, Charles O., and Smith.

Gordon, Hiram, and C. H. Free, assignors to Joyce, Inc., Pasadena, Calif. Shoe assembling and locating attachment. 2,449,216, Sept. 14.

Gorin, Manuel H.: *See*—
Abrams, Armand J., Gorin, and Baker.

Graham, Erwin W., Lakewood, Ohio, assignor to Republic Flow Meters Company, Chicago, Ill. Regulating apparatus. 2,449,217, Sept. 14.

Green, Lee B., Lakewood, assignor to Designers for Industry, Inc., Cleveland, Ohio. Oscillating fan heater. 2,449,377, Sept. 14.

Greenland, Leonard S., Weston-super-Mare, assignor to H. M. Hobson Limited, London, England. Fuel injection system for internal-combustion engines. 2,449,468, Sept. 14.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of ether esters. 2,449,471, Sept. 14.

Gresham, William F., Lindamere, and R. E. Brooks, Edgemoor Terrace, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polyformals. 2,449,469, Sept. 14.

Gresham, William F., and R. E. Brooks, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of organic oxygen-containing compounds. 2,449,470, Sept. 14.

Gruber, Francis E., assignor to Brown & Bigelow, St. Paul, Minn. Ball point pen. 2,449,218, Sept. 14.

Guillemin, Victor, Jr., Dayton, Ohio. Constant flow gas analyzer. 2,449,067, Sept. 14.

Guillet, Albert M., Charlotte, N. C. Leveling and aligning means. 2,449,219, Sept. 14.

Guindon, Arthur, St. Jerome, Quebec, Canada. Ski boot heel construction. 2,449,294, Sept. 14.

Gulliksen, Finn H., deceased, Oslo, Norway, by G. Gulliksen, administrator, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Polarized reed device. 2,449,472, Sept. 14.

Gulliksen, Gunvald, administrator: *See*—
Gulliksen, Finn H.

Gunn, Ross, Washington, D. C. Electric field or potential indicator. 2,449,068, Sept. 14.

Gupton, Ronda C., Newport News, Va. Cooling nozzle for use in welding. 2,449,220, Sept. 14.

Gutzeit Carlos L. assignor to Shell Development Company, San Francisco, Calif. Preparation of autoregenerative catalysts. 2,449,295, Sept. 14.

H-P-M Development Corporation, assignee: *See*—
Lindsey, Robert J.
Tucker, Warren R.

Hagenbook, Loy D., assignor to Goodman Manufacturing Company, Chicago, Ill. Connecting means for shaker conveyer troughs. 2,449,473, Sept. 14.

Haight, Clarence R., assignor of one-sixth to V. T. White, one-sixth to J. B. Flugstad, and one-sixth to L. G. Clauson, Cut Bank, Mont. Automatic hydraulic jack. 2,449,296, Sept. 14.

Halverson, Elmer L., Sacramento, Calif. Automatic water valve. 2,449,474, Sept. 14.

Hammerly, Herman J., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electromagnetically controlled switch. 2,449,221, Sept. 14.

Hammond Machinery Builders, Incorporated, assignee: *See*—
Krueger, Edward C.
Sutton, Donald E.

Hanks, Elmer C., assignee: *See*—
Transon, Robert L.

Hansen, Odd A., Kenmore, assignor to The Linde Air Products Company, New York, N. Y. System for dispensing a liquefied gas. 2,449,378, Sept. 14.

Harig Manufacturing Company, assignee: *See*—
Eckert, Theodore.

Harness, Russell R., Elwood, Ind. Baby chick shipping box. 2,449,222, Sept. 14.

Harriman, Flora L., Lansing, Mich. Hosiery protector. 2,449,115, Sept. 14.

Harris, Walter R., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,449,475, Sept. 14.

Harrison, Hugh A., Waterloo, Iowa. Sectional scaffold. 2,449,069, Sept. 14.

Harrison, James J.: *See*—
Barnes, Wilbur L., and Harrison.

Harrison, Thomas R., Wyncote, assignor to The Brown Instrument Company, Philadelphia, Pa. Antihunt electrical servomotor system. 2,449,476, Sept. 14.

Harshaw Chemical Company, The, assignee: *See*—
Pine, Paul R.
Smith, Leslie N.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Fennema, Pieter H., Kronouer, and Prakke.
Rathenau, Gerhard, Kruithof, and Hartveld.
Sleegers, Paulus A. W. M.
Van Alphen, Pieter M.

Hartveld, Joseph A.: *See*—
Rathenau, Gerhard, Kruithof, and Hartveld.

Haslacher, Alfred B., San Francisco, Calif. Packing of lettuce and package. 2,449,164, Sept. 14.

Hassler, Ernst H. H.: *See*—
Hopper, Stanley D., and Hassler.

Hatchett, James, Baird, Tex. Toy. 2,449,116, Sept. 14.

Hauser, Ethel, St. Louis, and P. Kovol, Maplewood, Mo.; said Kovol assignor to said Hauser. Protective coating for use in manicuring. 2,449,070, Sept. 14.

Hawk, Charles O., N. R. Stern, and L. J. E. Hofer, Pittsburgh, Pa., assignors to the United States as represented by the Secretary of the Interior. Catalyst for the synthesis of hydrocarbons. 2,449,071, Sept. 14.

Hayman, Bernard M., assignor to Automotive Products Company Limited, Leamington Spa, England. Braking device for electric motors. 2,449,223, Sept. 14.

Hegeman, Andrew S., Jr., Glen Ridge, and H. N. Snook, Maywood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Electrical circuit control. 2,449,224, Sept. 14.

Heidbrink, Jay A., Minneapolis, Minn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Airborne anesthetizing apparatus. 2,449,165, Sept. 14.

Heimbach, Newton, and W. Kelly, Jr., Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. 7-amino and 7-hydroxy-1,3,4-triazaindolizines as stabilizers for photographic silver-halide emulsions. 2,449,225, Sept. 14.

Heimbach, Newton, and W. Kelly, Jr., Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. 2-[vinyl-dicarboxylic acid ester]-3-amino-1,2,4-triazoles as stabilizers for photographic silver-halide emulsions. 2,449,226, Sept. 14.

Held, Joseph, West Reading, and H. Scheer, Stroudsburg, assignors to Textile Machine Works, Wyomissing, Pa. Knitting of shaped fabrics. 2,449,477, Sept. 14.

Hemphill Company, assignee: *See*—
Bradley, John S., and Smith.

Hencir, Frank J., St. Paul, Minn. Clothesline support. 2,449,379, Sept. 14.

Hengstebeck, Robert J.: *See*—
Wheeler, Harry K., Jr., and Hengstebeck.

Henricksen, Bjarne, Cliffside Park, N. J., assignor to Sedgwick Machine Works, Inc., Poughkeepsie, N. Y. Conveyer. 2,449,117, Sept. 14.

Hershberger, William D., Princeton, N. J., assignor to Radio Corporation of America. Microwave-acoustic light valve. 2,449,166, Sept. 14.

Herzog, Carl, Belleville, N. J. Sealing one end of open-ended tube, filling through remaining open end, and sealing remaining open end. 2,449,478, Sept. 14.

Hickman, Clarence N., Jackson Heights, N. Y. Mortar charge. 2,449,380, Sept. 14.

Hilland, Henry J., Chicago, Ill. Adjustable form locking chase structure. 2,449,381, Sept. 14.

Hirschler, Alfred E.: *See*—
Lipkin, Moses R., and Hirschler.

Hobart, Franklin G., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Crankcase oil thrower and crankpin lubricating device. 2,449,227, Sept. 14.

Hobson, H. M., assignee: *See*—
Greenland, Leonard S.

Hofer, Lawrence J. E.: *See*—
Hawk, Charles O., Stern, and Hofer.

Hoffer, Frank W., assignor to J. M. Degnan, Detroit, Mich., as trustee. Automatic fluid pressure balancing system. 2,449,297, Sept. 14.

Hoffmann-La Roche Inc., assignee: *See*—
Aeschlimann, John A.
Blankart, André.

Hofgaard, Rolf, Nordstrandshogda, near Oslo, Norway. Coupling means for use with calculating, bookkeeping, or like machines. 2,449,228, Sept. 14.

Hofmann, W., Textiles Inc., assignee: *See*—
Hofmann, Willy.

Hofmann, Willy, assignor to W. Hofmann Textiles Inc., West New York, N. J. Tufting machine. 2,449,529, Sept. 14.

Holicer, John R., Shreveport, La. High-pressure petroleum gas dispensing method and apparatus. 2,449,118, Sept. 14.

Holicer, John R., Shreveport, La. Control fitting for liquefied petroleum gas tanks. 2,449,119, Sept. 14.

Holst, Paul F. G.: *See*—
Kirkwood, Loren R., and Holst.

Hooe, John M.: *See*—
Volgenau, Robert H., and Hooe.

Hooker Electrochemical Company, assignee: *See*—
Kischitz, Alexander D., Gochenour, and Brailsford.

Hopewell, Lester H., Brooklyn, N. Y. Head and socket separable safety fastener. 2,449,167, Sept. 14.

Hoppe, William, Longmeadow, assignor to National Bread Wrapping Machine Co., Springfield, Mass. Method of and machine for applying labels. 2,449,298, Sept. 14.

Hopper, Stanley D., and E. H. H. Hassler, Stafford, assignors to The English Electric Company Limited, London, England. Electrical contacts. 2,449,479, Sept. 14.

Hopwood, John A., Westfield, assignor to Monitor Process Corporation, Jersey City, N. J. Milk delivery tube. 2,449,229, Sept. 14.

Houck, James P., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lighting control system for airports. 2,449,480, Sept. 14.

Houdry Process Corporation, assignee: *See*—
Bond, George R., Jr., and Mills.

Houghton, Edward W., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wattmeter circuit. 2,449,072, Sept. 14.

Huber, Robert, assignor of nine-tenths to R. P. Pescara, Paris, France, and one-tenth to Societe d'Etudes et de Participations, Eau, Gaz, Electricite, Energie, S. A. Geneva, Switzerland. Fuel injection device. 2,449,382, Sept. 14.

Hufferd, George H., Shaker Heights, assignor to The Weatherhead Company, Cleveland, Ohio. Reversible pump controlled hydraulic cylinder system. 2,449,482, Sept. 14.

Hufferd, George H., Shaker Heights, and G. O. R. Lindgren, Willoughby, assignors to The Weatherhead Company, Cleveland, Ohio. Valve. 2,449,481, Sept. 14.

Hunter, Willson H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Brake or the like frictionally engageable structure. 2,449,383, Sept. 14.

Hurdis, Everett C., Passaic, N. J., assignor to United States Rubber Company, New York, N. Y. Controlling polymerization of polyhydric alcohol esters of alpha-olefinic dicarboxylic acids with ethylenic monomers. 2,449,299, Sept. 14.

Hursey, Willis E., Oak Park, and G. Strunk, Glenellyn, Ill., assignors to Seeger-Sunbeam Corporation, St. Paul, Minn. Refrigerator mullion construction for preventing condensation. 2,449,384, Sept. 14.

Hydraulic Development Corp., Inc., The, assignee: *See*—
Bober, Walter F., and Sebring.
Lindsey, Robert J.

Ilford Limited, assignee: *See*—
Kendall, John D., and Suggate.

Induction Heating Corp., assignee: *See*—
Rudd, Wallace C., and Stanton.

Industrial Patent Corporation, assignee: *See*—
Wales, Nathaniel B.

Ingersoll-Rand Company, assignee: *See*—
Naab, Julius.

Interior, United States as represented by the Secretary of, assignee: *See*—
Hawk, Charles O., Stern, and Hofer.

International Handkerchief Mfg. Co., The, assignee: *See*—
Anderson, Gustave A.

Interrante, Frank, Brooklyn, N. Y. Ringlet hair curler. 2,449,301, Sept. 14.

Irion, Clarence E., Essex Fells, N. J., assignor, by mesne assignments, to Margot Corporation, New York, N. Y. Liquid printing ink containing a lignin compound. 2,449,230, Sept. 14.

Iwick, John F., Chicago, Ill. Animated picture viewing apparatus. 2,449,483, Sept. 14.

Jaffe, Hans, Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Controlling the resistivity of P-type crystals. 2,449,484, Sept. 14.

Jaskot, Edwin: *See*—
Santoro, Ovid, and Jaskot.

Jerger, Joseph, Ferguson, Mo., assignor to Curtiss-Wright Corporation. Aircraft cabin pressure control. 2,449,231, Sept. 14.

Jerome, Arthur L.: *See*—
Pascoe, Frank T., and Jerome.

Johannesen, John D., U. S. Navy. Coaxial line connector. 2,449,073, Sept. 14.

Johnson, Carroll W., Chicago, and J. T. Clark, Cicero, Ill. Dental chair unit. 2,449,385, Sept. 14.

Johnson, Clarence, South Euclid, Ohio, assignor to Bailey Meter Company. Gas analyzer. 2,449,485, Sept. 14.

Johnson, Francis, Detroit, Mich. Door and closure holder. 2,449,386, Sept. 14.

Johnson, John E., West Hartford, assignor to National Sherardizing and Machine Company, Hartford, Conn. Air-bag cleaning and buffing machine. 2,449,387, Sept. 14.

Johnson, Lloyd E., Fond du Lac Township, Tazewell County, Ill., assignor to Caterpillar Co., San Leandro, Calif. Fuel injection mechanism. 2,449,120, Sept. 14.

Jones, Bert R., West Haven, Conn. Anchors for lading retaining bands for one-top railway cars. 2,449,300, Sept. 14.

Jones, E. D., Grand Junction, Tenn. Rail tool. 2,449,232, Sept. 14.

Jones, Nelson A., Catawissa, Pa. Coupling unit. 2,449,121, Sept. 14.

Jones, Reuben G.: *See*—
Behrens, Otto K., Jones, and Soper.

Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,449,122, Sept. 14.

Joyce, Inc., assignee: *See*—
Gordon, Hiram, and Free.

Justus Roe & Sons, assignee: *See*—
Mortimer, Frank J.

Kealy, Edward M., Lon Beach, Calif. Latching device. 2,449,074, Sept. 14.

Kelly, Walter, Jr.: *See*—
Heimbach, Newton, and Kelly.

Kendall, John D., and H. G. Suggate, assignors to Ilford Limited, Ilford, England. Forming coloured images by means of aryl hydrazones of glyoxylic acid amide. 2,449,388, Sept. 14.

Kertz, James J., Jamaica, assignor to M. Coleman, New York, N. Y. Electrical alarm system. 2,449,168, Sept. 14.

Ketterer, Stanley J., St. Louis, Mo. Thread feeding device. 2,449,302, Sept. 14.

Kiesewetter, Walter, Ferndale, Mich. Ventilating window. 2,449,389, Sept. 14.

Killian, Orvel G., Wapakoneta, and B. O. Austin, Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,449,486, Sept. 14.

Kimball, James L., and R. C. Earley, Danvers, assignors to Ruggles-Klingemann Mfg. Co., Salem, Mass. Pilot valve for combined temperature and pressure control apparatus. 2,449,123, Sept. 14.

Kimmons, Arthur H., Burgettstown, Pa. Musical instrument. 2,449,124, Sept. 14.

King, Edward A. H., Port Washington, N. Y. Applicators for liquid medicinal preparations. 2,449,125, Sept. 14.

Kinsel, Anthony: *See*—
Breth, Ferdinand W., and Kinsel.

Kirby, Richard A., assignor to Expanded Rubber Company Limited, Croydon, England. The production of hard rubber. 2,449,390, Sept. 14.

Kirkpatrick, Wendell V., Bonita, Calif. Mechanical shorthand writing means. 2,449,126, Sept. 14.

Kirkwood, Loren R., Oakiyn, N. J., and P. F. G. Holst, Mount Healthy, Ohio, assignors to Radio Corporation of America. Deflecting circuits. 2,449,169, Sept. 14.

Kischitz, Alexander D., C. I. Gochenour, and R. E. Brailsford, assignors to Hooker Electrochemical Company, Niagara Falls, N. Y. The preparation of fluorine-containing cyclic hydrocarbons. 2,449,233, Sept. 14.

Kittle, Reynond J.: *See*—
Clark, Albert R., and Kittle.

Klarer, Willi: *See*—
Miescher, Karl, and Klarer.

Kleist, Herman W., assignor to Dole Refrigerating Company, Chicago, Ill. Apparatus for cooling the interiors of containers. 2,449,127, Sept. 14.

Knapp-Monarch Company, assignee: *See*—
Moeller, George L.

Knoble, Jack R., assignor to Roofing Machinery Mfg. Company, Chicago, Ill. Winder apparatus. 2,449,234, Sept. 14.

Knowlton, Cutler D., Rockport, and D. Edgar, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flamington, N. J. Machine for treating hides, skins, and leather. 2,449,128, Sept. 14.

Kogane, León, Paris, France, assignor to General Electric Company. Bidirectional selective remote control system. 2,449,391, Sept. 14.

Kolehmainen, Elmar, and H. S. Baird, Inglewood, Calif. Cooking utensil combination. 2,449,129, Sept. 14.

Kovol, Peter: *See*—
Houser, Ethel, and Kovol.

Kramer, Irvin R., Washington, D. C. Nonmagnetic armor. 2,449,075, Sept. 14.

Krebser, Adolf, Riehen, and W. Kuster, Basel, assignors to J. R. Geigy A. G., Basel, Switzerland. Acid chromable monoazo dyestuffs and making same. 2,449,130, Sept. 14.

Kremiller, Arthur E., Glendale, Calif., assignor to Adel Precision Products Corp. Pulsator system. 2,449,392, Sept. 14.

Krieg, Eldon L., South Whitley, Ind. Board pry. 2,449,393, Sept. 14.

Kroll, John H., Spokane, Wash. Pickup claw. 2,449,487, Sept. 14.

Kronouer, Johan G.: *See*—
Fennema, Pieter H., Kronouer, and Prakke.

Krueger, Edward C., Otsego, assignor to Hammond Machinery Builders, Incorporated, Kalamazoo, Mich. Work rest holder for centerless grinders. 2,449,488, Sept. 14.

Kruithof, Arie A.: *See*—
Rathenau, Gerhard, Kruithof, and Hartveld.

Krupp, Carroll P., Barberton, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Cord holder. 2,449,235, Sept. 14.

Kulka, Eugene R., Mount Vernon, N. Y. Holder for fluorescent lamps. 2,449,394, Sept. 14.

Kushner, Lina, assignee: *See*—
Erisman, Adolph C.

Kuster, Werner: *See*—
Krebser, Adolf, and Kuster.

Laing, Charles W. G., assignor to Mayo Visor Co., Detroit, Mich. Visor. 2,449,303, Sept. 14.

Lakso, Eino E., Fitchburg, Mass. Feeding device having flexible tubular wall, with compound motion for peripheral discharge. 2,449,395, Sept. 14.

Lamb, Anthony H., Hillside, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Supervisory electrical alarm system. 2,449,304, Sept. 14.

Lambert, Russell A., assignor to Brooks Bank Note Company, Springfield, Mass. Display apparatus. 2,449,530, Sept. 14.

Lamm, Uno, Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Västerås, Sweden. Means for influencing the blocking voltage in current converter valves. 2,449,396, Sept. 14.

Lamont, Lewis H., Chicago, Ill. Circuit protector. 2,449,236, Sept. 14.

Lamphere, Richard W., Wilbraham, assignor to American Bosch Corporation, Springfield, Mass. Electrical spark gap. 2,449,397, Sept. 14.

Landon, Walter S., assignor to Detroit Lubricator Company, Detroit, Mich. Fuel feeding apparatus. 2,449,237, Sept. 14.

La Plant-Choate Manufacturing Co., Inc., assignee: *See*—
Austin, Ellsworth W.

La Ray Engineering and Equipment Co., Inc., assignee: *See*—
Oertle, Lawrence C.

Larson, Alfred T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polymeric ethylene emulsions. 2,449,489, Sept. 14.

Larson, Leslie W., St. Paul, Minn. Rack attachment for laundry tubs. 2,449,131, Sept. 14.

Lathrop, Harold F.: *See*—
Winchester, Clark E., and Lathrop.

Lautenschläger, Carl L., and F. Lindner, Frankfort-on-the-Main, Germany; vested in the Attorney General of the United States. Extracting antidiabetic substance from pancreas. 2,449,076, Sept. 14.

Leas, Leo, assignor to Lee Paper Company, Vicksburg, Mich. Adjustable heads for paper winding reels. 2,449,398, Sept. 14.

Lee, Nixon, executor: *See*—
Lee, Nixon, Jr.

Lee, Nixon, Jr., deceased, Forest Hills, N. Y., N. Lee, executor. Impeller. 2,449,531, Sept. 14.

Lee Paper Company, assignee: *See*—
Leas, Leo.

Leeds and Northrup Company, assignee: *See*—
Dike, Paul H., and Doyle.

Lehrman, Leo A., assignor to American Steel Foundries, Chicago, Ill. Snubbed truck. 2,449,305, Sept. 14.

Leighton, John W., Port Huron, Mich. Kingpin assembly. 2,449,306, Sept. 14.

Lenehan, Bernard E., Bloomfield, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Relaying system. 2,449,490, Sept. 14.

Le Roi Company, assignee: *See*—
Eells, Paul W.

Leydorf, George F., Cincinnati, Ohio, assignor, by mesne assignments, to Avco Manufacturing Corporation. Indicator system for towed gliders. 2,449,532, Sept. 14.

Liebegott, George H., assignor to The Pennsylvania Rail-Road Company, Philadelphia, Pa. Means to prevent shifting of lading in freight carriers. 2,449,491, Sept. 14.

Lien, Arthur P.: *See*—
Evering, Bernard L., and Lien.

Lightfoot, Charles L., Jr., Summit, N. J. Filtration apparatus. 2,449,238, Sept. 14.

Lillquist, Torsten O., Hinsdale, Ill., assignor to General Motors Corporation, Detroit, Mich. Generating electric traction and control system. 2,449,399, Sept. 14.

Lilly, Eli, and Company, assignee: *See*—
Behrens, Otto K.
Behrens, Otto K., and Corse.
Behrens, Otto K., and Soper.

Lincoln Park Industries, Inc., assignee: See—
Eglinton, George F., and Woodworth.

Linde Air Products Company, The, assignee: *See*—
Hansen, Odd A.

Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Power converter. 2,449,077, Sept. 14.

Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Commutator apparatus. 2,449,078, Sept. 14.

Lindgren, George O. R.: *See*—
Hufferd, George H., and Lindgren.

Lindner, Fritz: *See*—
Lautenschlager, Carl L., and Lindner.

Lindsey, Robert J., Mount Gilead, Ohio, assignor to The Hydraulic Development Corp., Inc., Wilmington, Del. Follow-up servomotor. 2,449,400, Sept. 14.

Lindsey, Robert J., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Apparatus selectively operable as a press or as a drop hammer. 2,449,401, Sept. 14.

Lionel Corporation, The, assignee: *See*—
Gash, Abram D., Jr.

Lipkin, Moses R., Philadelphia, and A. E. Hirschler, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Separating aromatic hydrocarbons from a hydrocarbon mixture. 2,449,402, Sept. 14.

Lockheed Aircraft Corporation, assignee: *See*—
Burcham, Milo.

Long, Albert T., Baltimore, Md. Lectern. 2,449,492, Sept. 14.

Longini, Richard L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Attaining high vacuum in photoelectric tubes. 2,449,493, Sept. 14.

Lucia, Louis V., West Hartford, Conn. Refrigerator for making and using crushed ice. 2,449,132, Sept. 14.

Ludwig, Leon R., T. C. Fockler, W. H. Formhals, Buffalo, N. Y., and H. T. Walton, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Fan-cooled dynamoelectric machine. 2,449,494, Sept. 14.

Lum, John C., Union, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Application of phosphate protective coatings to nonferrous metals. 2,449,495, Sept. 14.

Lyijynen, Fred, assignor to Briggs Manufacturing Company, Detroit, Mich. Press. 2,449,133, Sept. 14.

MacLean, John B., and M. E. Schlenker, Peru, Ill., assignors to General Time Instruments Corporation, New York, N. Y. Bomb fuse. 2,449,170, Sept. 14.

Maddux, Duane C., assignee: *See*—
Weller, Clair B.

Madison, Knowles K.: *See*—
Elliott, Daniel R., and Madison.

Majauskas, Charles J., Chicago, Ill. Ventilating and flushing apparatus for water closets. 2,449,134, Sept. 14.

Magnus, Oscar F., Chicago, Ill., assignor to American Brake Shoe Company, New York, N. Y. Snubbed trailing setting switch stand. 2,449,239, Sept. 14.

Manis, George E.: *See*—
Watrous, Floyd L., and Manis.

Mantan, Frank J., Gary, Ind. Electrical connection. 2,449,496, Sept. 14.

Margot Corporation, assignee: *See*—
Irion, Clarence E.

Marine Magnesium Products Corporation, assignee: *See*—
Gloss, Gunter H., and Baker.

Martin, Eugene, Wesleyville, Pa., assignor to The Standard Stoker Company, Incorporated. Conveying mechanism. 2,449,240, Sept. 14.

Martindale Electric Company, The, assignee: *See*—
Scharping, Otto W.

Maschinenfabrik Schweiter A. G., assignee: *See*—
Schweiter, Walter.

Matthews, Daniel, Toronto, Ontario, Canada. Golf bag stand. 2,449,171, Sept. 14.

May, Richard W., Cedar Rapids, Iowa, assignor to Collins Radio Company. Tuning device ratchet. 2,449,079, Sept. 14.

Mayer, Elmer L.: *See*—
McGovran, Edward R., Mayer, and Talley.

Mayfield, Orley J., N. F. Morehouse, and A. W. Walde, Charles City, Iowa, assignors to Dr. Salisbury's Laboratories. Composition for control of poultry coccidiosis. 2,449,080, Sept. 14.

Mayfield, Orley J., N. F. Morehouse, and A. W. Walde, Charles City, Iowa, assignors to Dr. Salisbury's Laboratories. Composition for control of poultry coccidiosis. 2,449,081, Sept. 14.

Mayo Visor Co., assignee: *See*—
Laing, Charles W. G.

McBride, Robert L., New York, N. Y. Clamping mechanism. 2,449,172, Sept. 14.

McCabe, Louis P., Hollis, N. Y. Preventing distortion in butt-welded plates. 2,449,082, Sept. 14.

McCrum, Walter L.: *See*—
Bowen, William S., and McCrum.

McDougal, Taine G., Flint, assignor to General Motors Corporation, Detroit, Mich. Spark plug electrode. 2,449,403, Sept. 14.

McGovran, Edward R., Hyattsville, Md., E. L. Mayer, Anaheim, Calif., and F. B. Talley, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Synergistic insecticidal compositions. 2,449,533, Sept. 14.

McLeod, Will W., Montgomery, Ala. Combination aspirator tip. 2,449,497, Sept. 14.

Meade, Reginald E.: *See*—
Pollard, Henry L., Rodgers, and Meade.
Rodgers, Nelson E., Pollard, and Meade.

Mears, William T.: *See*—
Falge, Robert N., and Mears.

Meisenheimer, Allen H., Jr.: *See*—
Dryer, Eldon O., and Meisenheimer, Jr.

Mellichampe, Lawton B., Washington, D. C. Child's toilet seat. 2,449,498, Sept. 14.

Mersereau, Everard C., Staten Island, N. Y., assignor to The Elicon Company. Hand strap. 2,449,307, Sept. 14.

Metropolitan Mechanical Display Company: *See*—
Erisman, Adolph C.

Meyer, Hans, Richmond, England. Wearing apparel having permanent creases therein. 2,449,534, Sept. 14.

Michigan Carton Company, assignee: *See*—
Barnes, Wilbur L., and Harrison.

Miescher, Karl, and W. Klarer, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J. Imidasolines. 2,449,241, Sept. 14.

Milburn, Sidney R., Mountain View, N. J., assignor to United States Rubber Company, New York, N. Y. Device for demonstrating the action of the front wheels of automobiles. 2,449,499, Sept. 14.

Millard, Everett L., Highland Park, Ill. Ski binding. 2,449,242, Sept. 14.

Miller, Edward A.: *See*—
Gillett, William, and Miller.

Miller, Paul B., Los Angeles, assignor to Pacific Pumps, Inc., Huntington Park, Calif. Self-aligning pump flange. 2,449,243, Sept. 14.

Miller, Robert J., Berkeley, assignor to California Research Corporation, San Francisco, Calif. Treatment of acid tars. 2,449,404, Sept. 14.

Mills, George A.: *See*—
Bond, George R., Jr., and Mills.

Miner, W. H., Inc., assignee: *See*—
Olander, Roland J.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Anderson, Arthur A.

Minnium, Byron B., assignor to Erie Resistor Corporation, Erie, Pa. High voltage condenser. 2,449,308, Sept. 14.

Moeller, George L., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo. Manufacturing commutators. 2,449,309, Sept. 14.

Monitor Process Corporation, assignee: *See*—
Hopwood, John A.

Monsanto Chemical Company, assignee: *See*—
Smith, Franklin D.
Walter, Henry A.

Mordan, Joseph R., Alden, N. Y. Air propelled top. 2,449,405, Sept. 14.

Moreau, Eduardo E., Buenos Aires, Argentina. Integrator. 2,449,310, Sept. 14.

Morehouse, Neal F.: *See*—
Mayfield, Orley J., Morehouse, and Walde.

Morris, Rupert C., Berkeley, and E. C. Shokal, Oakland, Calif. Alkenyl sulfolanyl and sulfolenyl carbonates. 2,449,173, Sept. 14.

Mortimer, Frank J., Blue Point, assignor to Justus Roe & Sons, Patchogue, N. Y. Measuring tape reel housing construction. 2,449,406, Sept. 14.

Mueller, Fritz W. H., and A. Bayley, Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Thioindoxyl couplers for color photography. 2,449,244, Sept. 14.

Muir, George A., New York, N. Y. Method of and apparatus for setting self-synchronous machines on zero. 2,449,083, Sept. 14.

Mulholland, David E., Fort Myers, Fla., assignor to W. S. Mulholland, Reading, Pa. Apparatus for forming grinding wheels. 2,449,407, Sept. 14.

Mulholland, Walter S., assignee: *See*—
Mulholland, David E.

Murphy, Philip H., Helena, Mont. Land vehicle, adapted for fire suppression. 2,449,311, Sept. 14.

Murray, D. J., Manufacturing Co., assignee: *See*—
Rosmait, John A.

Murray, George W., Pleasantville, and C. D. Thayer, Jackson Heights, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated. Block greases. 2,449,312, Sept. 14.

Murray, Peter R., Dayton, Ohio. Remote control system for aircraft landing gear and landing flaps. 2,449,084, Sept. 14.

Naab, Julius, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Compressor. 2,449,408, Sept. 14.

Naef, Alfred H., Chatham, assignor to The Daven Company, Newark, N. J. Ground connecting device. 2,449,313, Sept. 13.

National Bread Wrapping Machine Co., assignee: *See*—
Hoppe, William.

National Sherardizing and Machine Company, assignee: *See*—
Johnson, John E.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Speck, John C., Jr.

Nelson, John J., assignor of one-half to T. J. Rozar, Birmingham, Ala. Air hose connection. 2,449,245, Sept. 14.

Nissen, Warren I., Newark, N. J. Cigar lighter. 2,449,314, Sept. 14.

Nordmark, Walter E., assignor to American Seating Company, Grand Rapids, Mich. Chair seat. 2,449,500, Sept. 14.

Norgauer, John W.: *See*—
Craig, Ralph P., and Norgauer.

Norton Company, assignee: *See*—
Coes, Loring, Jr.

O'Brien, William J., Los Angeles, Calif., assignor to The Decca Record Company, Limited, London, England. Antenna supply phase and amplitude control. 2,449,174, Sept. 14.

O'Brien, William J., London, assignor to The Decca Record Company, Limited, London, S. W. 9, England. Radio direction finder. 2,449,175, Sept. 14.

Oertle, Lawrence C., assignor to La Ray Engineering and Equipment Co., Inc., Milwaukee, Wis. Gantry. 2,449,501, Sept. 14.

Ohio Crankshaft Company, The, assignee: *See*—
Somes, Howard E.

Okonite-Callender Cable Company, Incorporated, assignee: *See*—
Bennett, Charles E., and White.

Olander, Roland J., assignor to W. H. Miner, Inc., Chicago, Ill. Car-end platform buffing mechanism. 2,449,135, Sept. 14.

Osborn Manufacturing Company, The, assignee: *See*—
Abbrecht, Herman R.
Benyak, John B.

Pacific Pumps, Inc., assignee: *See*—
Miller, Paul B.

Package Machinery Company, assignee: *See*—
Smith, Elmer L.

Page, Herbert E., Alhambra, Calif. Ironing machine. 2,449,246, Sept. 14.

Partin, Albert, Portales, N. Mex. Adjustable draw bar for trailer couplings. 2,449,315, Sept. 14.

Pascoe, Frank T., Carnegie, and A. L. Jerome, Edgewood, assignors to The Union Switch & Signal Company, Swissvale, Pa. Recall control means. 2,449,176, Sept. 14.

Pateras, Pescara R., assignee et al: *See*—
Huber, Robert.

Pattison, Herbert J., assignor to Briggs Manufacturing Company, Detroit, Mich. Making molds. 2,449,136, Sept. 14.

Paucek, Andrew J., Flushing, N. Y., assignor to Burndy Engineering Company, Inc. Forming tubular structures. 2,449,247, Sept. 14.

Penney, James H., Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Fan-cooled motor. 2,449,502, Sept. 14.

Pennow, Willis A., and E. W. Yungman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Shutter. 2,449,503, Sept. 14.

Pennsylvania Railroad Company, The, assignee: *See*—
Liebegott, George H.

Perry, Leslie K., Los Angeles, Calif. Tilt-actuated switch. 2,449,177, Sept. 14.

Petersen, Robert W., San Bernardino, Calif. Fuel injector control dial gauge. 2,449,137, Sept. 14.

Peterson, Raymond A., assignor, by mesne assignments, to United Geophysical Company, Inc., Pasadena, Calif. Submersible seismometer system. 2,449,085, Sept. 14.

Petschauer, Beryl B., Oakland, Calif. Coiffure for dolls. 2,449,248, Sept. 14.

Pettersen, Wilber E., Akron, assignor, by mesne assignments, to Coleman-Pettersen Corporation, Cleveland, Ohio. Bending machine with pivoted bender carrying a work supporting arm. 2,449,409, Sept. 14.

Pfleumer, Hans, New Brunswick, N. J. Canning jar. 2,449,316, Sept. 14.

Philco Corporation, assignee: *See*—
Rundell, Theodore W.

Phillips, Dwight M., Fullerton, assignor to Chiksan Tool Company, Brea, Calif. Rotatable electrical connection. 2,449,138, Sept. 14.

Phillips Petroleum Company, assignee: *See*—
Thodos, George, and Weinaug.

Pieslak, Joseph W., and R. E. Crane, Kittanning, Pa. Method of and molds for casting vitreous water closet bowls. 2,449,249, Sept. 14.

Pine, Paul R., Middleburgh Heights, assignor to The Harshaw Chemical Company, Elyria, Ohio. Anode. 2,449,504, Sept. 14.

Pitman, Earle C., Red Bank, N. J., assignor to Compo Shoe Machinery Corporation, Boston, Mass. Electrostatic pressing apparatus. 2,449,317, Sept. 14.

Pitman, Earle C., Red Bank, N. J., and E. L. Crandell, Wellesley, assignors to Compo Shoe Machinery Corporation, Boston, Mass. Electrostatic ironing apparatus. 2,449,318, Sept. 14.

Pityo, Albert F., Clifton, H. Butterfield, Maplewood, and S. W. Warner, assignors to Tweezer-Weld Corporation, Newark, N. J. Machine for producing cathode sleeves for thermionic valves. 2,449,505, Sept. 14.

Polak, Emil, Woodside, Long Island, N. Y. Bookmark. 2,449,319, Sept. 14.

Polinsky, John, Cleveland, Ohio. Protective device for horses' legs. 2,449,410, Sept. 14.

Pollard, Ernest I., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Pole tip structure for salient pole synchronous machines. 2,449,506, Sept. 14.

Pollard, Henry L.: *See*—
Rodgers, Nelson E., Pollard, and Meade.

Pollard, Henry L., N. E. Rodgers, and R. E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Enhancing the yield of vitamins in fermentations. 2,449,140, Sept. 14.

Pollard, Henry L., N. E. Rodgers, and R. E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Production of riboflavin by fermentation processes. 2,449,141, Sept. 14.

Pollard, Henry L., N. E. Rodgers, and R. E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Improving the yield of riboflavin in fermentation processes. 2,449,142, Sept. 14.

Pollard, Henry L., N. E. Rodgers, and R. E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Fermentation method for preparing a vitamin concentrate. 2,449,143, Sept. 14.

Pope, Alfred, Penn Fields, Wolverhampton, assignor to Joshua Bigwood & Son Limited, Wolverhampton, England. Stretching machine for uncoiling, flattening, and coiling metal strip. 2,449,507, Sept. 14.

Porcelain Metals Corporation, assignee: *See*—
Richterkessing, Frank H.

Posner, Kurt, London, England, now by change of name J. K. Power. Apparatus for manufacturing and filling capsules. 2,449,139, Sept. 14.

Power, John K.: *See*—
Posner, Kurt.

Prakke, Frits: *See*—
Fennema, Pieter H., Kronouer, and Prakke.

Price, Osborne L., Frederick, Md. Electric relay. 2,449,086, Sept. 14.

Radio Corporation of America, assignee: *See*—
Hershberger, William D.
Kirkwood, Loren R., and Holst.
Lindenblad, Nils E.
Sands, William F.
Sonthelmer, Carl G.
Szikiai, George C.
Zappacosta, Amedeo D.

Raimondi, Gaetano, New York, N. Y. Land and water vehicle. 2,449,320, Sept. 14.

Rapaport, Gustav H., Kansas City, Mo. Preparing synthetic spice. 2,449,411, Sept. 14.

Rathenau, Gerhard, A. A. Kruithof, and J. A. Hartveld, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Tuning indicator for indicating resonance of an electric circuit. 2,449,412, Sept. 14.

Rayon, Andrew, Sulphur, La. Shoe shank grooving machine. 2,449,321, Sept. 14.

Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.

Reconstruction Finance Corporation, assignee: *See*—
Castle, James B.
Seelig, Richard P.

Republic Flow Meters Company, assignee: *See*—
Graham, Erwin W.

Reynolds, Charles L., Georgetown, Del. Dispensing apparatus for strip material. 2,449,508, Sept. 14.

Rich, Theodore A., Schenectady, N. Y., assignor to General Electric Company. Sensitive direct-current measuring apparatus. 2,449,413, Sept. 14.

Richards, Sidney H., Portland, Maine. Nonskid device for crutches and the like. 2,449,509, Sept. 14.

Richardson, Isaac F., Gallatin, Tenn. Compound for fishing bait. 2,449,322, Sept. 14.

Richter, Karl C., West Springfield, Mass. Lamp and a support therefor. 2,449,250, Sept. 14.

Richterkessing, Frank H., assignor to Porcelain Metals Corporation of Kentucky, Louisville, Ky. Sheet-metal receptor. 2,449,323, Sept. 14.

Rippelle, Earl F.: *See*—
Van Degrift, Thomas C., Zmuda, and Riopelle.

Robertshaw-Fulton Controls Company, assignee: *See*—
Unger, Max S.

Robertson, Billy P., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lubricants. 2,449,510, Sept. 14.

Robinson, Clifford C., Sioux City, Iowa. Wrist-attached article carrier. 2,449,324, Sept. 14.

Rodgers, Nelson E.: *See*—
Pollard, Henry L., Rodgers, and Meade.

Rodgers, Nelson E., H. L. Pollard, and R. E. Meade, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Preparing a vitamin concentrate. 2,449,144, Sept. 14.

Rogers, James F., Rocky River, Ohio. Lighter. 2,449,414, Sept. 14.

Rogoff, Julian, New Rochelle, N. Y., assignor to Burndy Engineering Company, Inc. Separable connector. 2,449,251, Sept. 14.

Roofing Machinery Mfg. Company, assignee: *See*—
Knoble, Jack R.

Rosmait, John A., Appleton, assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Valve. 2,449,145, Sept. 14.

Ross, Clark F., assignee: *See*—
Sneckner, Harold A.

Rothweiler, Charles O., Milwaukee, Wis. Profiling device. 2,449,252, Sept. 14.

Rozar, T. J., assignee: *See*—
Nelson, John J.

Rudd, Wallace C., Larchmont, and R. J. Stanton, Brooklyn, assignors to Induction Heating Corp., New York, N. Y. Induction heating of rotatable blade assemblies and the like. 2,449,325, Sept. 14.

Ruggles-Klingemann Mfg. Co., assignee: *See*—
Kimball, James L., and Earley.

Rundell, Theodore W., Abington, assignor to Philco Corporation, Philadelphia, Pa. Refrigerator cabinet construction. 2,449,415, Sept. 14.

Russell, William J., New Britain, Conn., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Container for bombs. 2,449,511, Sept. 14.

Ryan, Clarence N., Washington, D. C. Auto wrecking crane. 2,449,146, Sept. 14.

Salomon, Francois M. M. B., Paris, France. Oscillation reducing device. 2,449,087, Sept. 14.

Salsbury's, Dr., Laboratories, assignee: *See*—
Mayfield, Orley J., Morehouse, and Walde.

Samuels, Lloyd W., Allentown, Pa. Toy. 2,449,147, Sept. 14.

Sands, William F., West Collingswood, N. J., assignor to Radio Corporation of America. Permeability tuned image attenuation circuits. 2,449,148, Sept. 14.

Sansbury, George L., assignor to Collins Radio Company, Cedar Rapids, Iowa. Step-by-step automatic tuning control. 2,449,178, Sept. 14.

Santoro, Ovid, Bloomfield, and E. Jaskot, Passaic, N. J., assignors to Celanese Corporation of America. Plasticized and stabilized cellulose compound and making it. 2,449,149, Sept. 14.

Sargent, Edmund L., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Preparation of hollow gel spheroids. 2,449,253, Sept. 14.

Schaefer, Frederick, North Plainfield, N. J. Safety guard-rail. 2,449,326, Sept. 14.

Scharping, Otto W., assignor to The Martindale Electric Company, Cleveland, Ohio. Milling machine. 2,449,179, Sept. 14.

Scheer, Herman: *See*—
Held, Joseph, and Scheer.

Scheuer, Clemens, Forest Hills, N. Y. Apparatus for making hollow plastic articles. 2,449,512, Sept. 14.

Schiffrin, Moses J., Laurelton, N. Y. Artificial fur fabric. 2,449,416, Sept. 14.

Schlenker, Max E.: *See*—
MacLean, John B., and Schlenker.

Schlitters, Michael J., Grosse Pointe Park, Mich. Slide assembly for machine tools. 2,449,327, Sept. 14.

Schmidt, George C., assignor, by mesne assignments, of one-half to L. R. Schmidt, and one-half to R. G. Schmidt, Pittsburgh, Pa. Soap feeder. 2,449,513, Sept. 14.

Schmidt, Lois R., assignee, et al.: *See*—
Schmidt, George C.

Schmidt, Robert G., assignee, et al.: *See*—
Schmidt, George C.

Schnoll, Nathan, Palisade, N. J. Portable indicator device for ordinary two prong plugs. 2,449,150, Sept. 14.

Scholl, William M., Chicago, Ill. Locating and positioning foot corrective appliances. 2,449,535, Sept. 14.

Schroeder, Herman E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Composition of phenol-rubber and resorcinol-formaldehyde. 2,449,180, Sept. 14.

Schultz, Arthur B., Wilmington, Del., assignor to All American Aviation, Inc. Buoyant ground station. 2,449,417, Sept. 14.

Schweiter, Walter, Horgen, Switzerland, assignor to Maschinenfabrik Schweiter A. G. Automatic winder. 2,449,328, Sept. 14.

Sciascia, Mathew: *See*—
Farber, Eduard, and Sciascia.

Scoville, Warren E., Jr., Nutley, N. J., assignor to United States Rubber Company, New York, N. Y. Oil well packer. 2,449,514, Sept. 14.

Sebell, Harry, Wilmington, assignor to Bell Products Corporation, Boston, Mass. Apparatus for plating sheet metal. 2,449,329, Sept. 14.

Sebring, Frank E.: *See*—
Bober, Walter F., and Sebring.

Sedgwick Machine Works, Inc., assignee: *See*—
Henricksen, Bjarne.

Seeger-Sunbeam Corporation, assignee: *See*—
Hursey, Willis E., and Strunk.

Seelig, Richard P., Long Island, assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Forming parts from powdered metal. 2,449,515, Sept. 14.

Seymour, Malcolm, Boston, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Cement sole attaching apparatus. 2,449,151, Sept. 14.

Shakespeare, Henry G., and W. R. Gerry, assignors to Shakespeare Products Company, Kalamazoo, Mich. Control mechanism. 2,449,516, Sept. 14.

Shakespeare Products Company, assignee: *See*—
Shakespeare, Henry G., and Gerry.

Sharkey, William H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Rubbery diolefin polymers containing processing aids. 2,449,418, Sept. 14.

Shatkin, Aaron, Matawan, N. J. Safety latch. 2,449,419, Sept. 14.

Shaw, Alfred, Chicago, Ill. Roof structure. 2,449,330, Sept. 14.

Shell Development Company, assignee: *See*—
Fairbairn, Alasdair W.
Gutzeit, Carlos L.
Vaughan, William E., and F. F. Rust.

Shoda, Walter, St. Albans, N. Y. Sectional post lock for loose-leaf binders. 2,449,331, Sept. 14.

Shokal, Edward C.: *See*—
Morris, Rupert C., and Shokal.

Signaigo, Frank K., Brandywine Hundred, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. S-(amidomethyl)-dimercaptopropanols. 2,449,332, Sept. 14.

Simplex Piston Ring Mfg. Company, assignee: *See*—
Ferguson, Frederick G., and Thompson.

Skriver, George J.: *See*—
Allen, Harry L., and Skriver.

Sleegers, Paulus A. W. M., Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee. Electrode system. 2,449,420, Sept. 14.

Slemmons, Charles O., Akron, and R. W. Smith, Copley, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Track for vehicles. 2,449,421, Sept. 14.

Sly, Le Roy W., Kyburz, Calif. Tricycle. 2,449,254, Sept. 14.

Small, Edward F., Newton, assignor to Compo Shoe Machinery Corporation, Boston, Mass. Apparatus for attaching heels to shoes. 2,449,333, Sept. 14.

Smiley, John R., Kansas City, Mo. Nonremovable transparent identification band with a tag therein. 2,449,181, Sept. 14.

Smith, Elmer L., Longmeadow, assignor to Package Machinery Company, Springfield, Mass. Packaging. 2,449,334, Sept. 14.

Smith, Franklin D., Webster Groves, assignor to Monsanto Chemical Company, St. Louis, Mo. Octa-chloro-biphenyl quinone. 2,449,088, Sept. 14.

Smith, Herbert O.: *See*—
Goldthwait, Charles F., and Smith.

Smith, Leslie N., Cleveland Heights, assignor to The Harshaw Chemical Company, Elyria, Ohio. Electrodeposition of nickel. 2,449,422, Sept. 14.

Smith, Norman H.: *See*—
Bradley, John S., and Smith.

Smith, Robert W.: *See*—
Slemmons, Charles C., and Smith.

Sneckner, Harold A., assignor to Clark F. Ross, Richmond Heights, Mo. Work-holding device. 2,449,255, Sept. 14.

Snook, Harry N.: *See*—
Hegeman, Andrew S., Jr., and Snook.

Societe d'Etudes et de Participations, Eau, Gaz, Electricite, Energie, S. A., assignee, et al.: *See*—
Huber, Robert.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Abrams, Armand J., Gorin, and Baker.
Murray, George W., and Thayer.
Sargent, Edmund L.

Sodowich, Joe, assignee, et al.: *See*—
Warner, Samuel W.

Somes, Howard E., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Heat-treating apparatus. 2,449,089, Sept. 14.

Sonneborn, L., Sons, Inc., assignee: *See*—
Breth, Ferdinand W., and Kinsel.

Sontheimer, Carl G., Haddonfield, N. J., assignor to Radio Corporation of America. Dielectrically tuned wavemeter. 2,449,182, Sept. 14.

Soper, Quentin F.: *See*—
Behrens, Otto K., Jones, and Soper.
Behrens, Otto K., and Soper.

Southern Steel Company, assignee: *See*—
White, Loyd J.

Sowa, Frank J., Cranford, N. J. Hydraulic pressure device and actuating fluid therefor. 2,449,335, Sept. 14.

Speck, John C., Jr., Bloomington, Ind., assignor to the United States of America as represented by the Secretary of the Navy. Separation of monoethanolamine from admixtures by azeotropic distillation with chlorobenzene. 2,449,152, Sept. 14.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Temperature compensated magnetron. 2,449,090, Sept. 14.

Spira, Josef H., New York, N. Y. Bezel dop and grinding device. 2,449,423, Sept. 14.

Spitzwieser, Ferdinand, New York, N .Y. Scooter for winter sports. 2,449,336, Sept. 14.

Stacy, L. David: *See*—
Bell, James R., Stacy, and Dischinger.

Standard Oil Company, The, assignee: *See*—
Darling, Samuel M.
Evering, Bernard L., and Llen.
Wheeler, Harry K., Jr.
Wheeler, Harry K., Jr., and Hengstbeck.

Standard Stoker Company, Incorporated, The, assignee: *See*—
Martin, Eugene.

Starling, Richard G., Harviell, Mo. Machine for testing clutch and brake assemblies. 2,449,091, Sept. 14.

Starr, John H., Mayville, Wis., assignor to John Deere Van Brunt Company. Power lift for grain drills. 2,449,183, Sept. 14.

Stauffer Chemical Company, assignee: *See*—
Belchetz, Arnold.

Steinberg, Robert, Great Neck, N. Y. Work gloves. 2,449,337, Sept. 14.

Stern, Norman R.: *See*—
Hawk, Charles O., Stern, and Hofer.

Stevens, Charles R., Toledo, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio. External anode power amplifier and oscillator tube. 2,449,256, Sept. 14.

Stieber, Frank C., Marathon, Wis. Adjustable friction supporting device. 2,449,424, Sept. 14.

Stieger, Philip J., St. Paul, Minn. Garter. 2,449,425, Sept. 14.

Stout, Perry R., Washington, D. C., and W. J. Tull, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Conical scanning error reduction device. 2,449,517, Sept. 14.

Strauss, Carol L., Bangor, Maine. Support for bed lamps. 2,449,426, Sept. 14.

Strean, Lyon P., Montreal, Quebec, Canada, assignor, by mesne assignments, to Ayerst, McKenna & Harrison Limited, New York, N. Y. Oral fluoride-vitamin preparation. 2,449,184, Sept. 14.

Strom, Albert P., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,449,518, Sept. 14.

Strubble, Donald L., Marshall, Mich. Scraping implement. 2,449,092, Sept. 14.

Strunk, Gilbert: *See*—
Hursey, Willis E., and Strunk.

Suggate, Harold G.: *See*—
Kendall, John D., and Suggate.

Summersett, Everett E., Hollywood, Fla. Circuit control means for motor vehicles. 2,449,338, Sept. 14.

Sun Oil Company, assignee: *See*—
Lipkin, Moses R., and Hirschler.

Sutton, Donald E., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich. Belt tightening and tracking device. 2,449,519, Sept. 14.

Sylvania Electric Products, Inc., assignee: *See*—
Allphin, Willard J.
Clapp, Richard H.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Cathode-ray tube. 2,449,339, Sept. 14.

Talley, Florence B.: *See*—
McGovran, Edward R., Mayer, and Talley.

Tanner, Fred W., Jr., and J. M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Vitamin B-complex concentrate. 2,449,340, Sept. 14.

Tardif, Gerard E., Quebec, Quebec, Canada. Plotting aircraft navigation computer. 2,449,342, Sept. 14.

Textile Machine Works, assignee: *See*—
Held, Joseph, and Scheer.

Thayer, Chester D.: *See*—
Murray, George W., and Thayer.

Thodos, George, and C. F. Weinaug, Borger, Tex., assignors to Phillips Petroleum Company. Foam prevention in extractive distillation of hydrocarbons with furfural solvent. 2,449,427, Sept. 14.

Thomas, James H.: *See*—
Burns, Henry L., and Thomas.

Thompson, Ralph C.: *See*—
Ferguson, Frederick G., and Thompson.

Thompson, Wesley, assignee: *See*—
Young, David S.

Timber Engineering Company, assignee: *See*—
Farber, Eduard, and Sciascia.

Timmons, Amleal A., assignor of ninety-eight per cent to W. Timmons, McKinney, Tex. Die assembly and rubber insert for flanging sheet metal. 2,449,428, Sept. 14.

Timmons, Wayde, assignee: *See*—
Timmons, Amleal A.

Torbensen, Gertrude S., assignee: *See*—
Torbensen, Viggo V.

Torbensen, Viggo V., assignor to G. S. Torbensen, Cleveland, Ohio. Refrigeration apparatus. 2,449,343, Sept. 14.

Transon, Robert L., Oakland, Calif., assignor of one-half to E. C. Hanks. Carbon holder. 2,449,341, Sept. 14.

Traylor Engineering & Manufacturing Company, assignee: *See*—
Bernhard, Richard.

Trumbull Electric Manufacturing Company, The, assignee: *See*—
Hammerly, Herman J.

Tschumi, Otto, assignor to Autophone Aktiengesellschaft, Soleure, Switzerland. Device for conference calls in subscribers' devices for loud and faintly audible traffic. 2,449,344, Sept. 14.

Tucker, Warren R., Dayton, Ohio, assignor to The H-P-M Development Corporation. Press for powdered metals. 2,449,257, Sept. 14.

Tull, William J.: *See*—
Stout, Perry R., and Tull.

Tuttle, Orvil S.: *See*—
Dunne, James J., and Tuttle.

Tweezer-Weld Corporation, assignee: *See*—
Pityo, Albert F., Butterfield, and Warner.

Unger, Max S., Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Safety control system for fuel burners. 2,449,185, Sept. 14.

Union Switch & Signal Company, The, assignee: *See*—
Pascoe, Frank T., and Jerome.

United Geophysical Company, Inc., assignee: *See*—
Peterson, Raymond A.

United Shoe Machinery Corporation, assignee: *See*—
Jorgensen, Bernhardt.
Knowlton, Cutler D., and Edgar.
Seymour, Malcolm.

United States Plywood Corporation, assignee: *See*—
Dunne, James J., and Tuttle.

United States Rubber Company, assignee: *See*—
Elliott, Daniel R., and Madison.
Hurdis, Everett C.
Milburn, Sidney R.
Scoville, Warren E., Jr.

Urbach, Franz, Rochester, N. Y. Photographic silver bromide emulsion sensitized with cysteine. 2,449,153, Sept. 14.

Vaillancourt, Wilfred J., Fall River, Mass. Bobbin lock. 2,449,258, Sept. 14.

Van Alphen, Pieter M., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hardford, Conn., as trustee. Schmidt type optical system with parallel plate refractive element. 2,449,259, Sept. 14.

Van Alphen, Pieter M., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Schmidt type optical system with opaque diaphragm. 2,449,345, Sept. 14.

Van Brunt, John Deere, Company, assignee: *See*—
Starr, John H.

Van Degrift, Thomas C., A. W. Zmuda, and E. F. Riopelle, assignors to General Motors Corporation, Detroit, Mich. Balancing machine. 2,449,429, Sept. 14.

Van Lanen, James M.: *See*—
Tanner, Fred W., and Van Lanen.

Vannoy, Wesley G., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Silicate paints. 2,449,346, Sept. 14.

Vaughan, William E., and F. F. Rust, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Hydrogen bromide-catalyzed oxidation of organic compounds. 2,449,347, Sept. 14.

Vickroy, George S., Johnstown, Pa., assignor to Carnegie-Illinois Steel Corporation. Rail brace. 2,449,260, Sept. 14.

Vitoux, Marcel, assignor to American Vitos Company, Inc., New York, N. Y. Device for mending stockings. 2,449,154, Sept. 14.

Voight, August L., Berea, Ohio. Comb. 2,449,430, Sept. 14.

Volgenau, Robert H., Buffalo, and J. M. Hooe, Ogdensburg, N. Y. Beehive. 2,449,348, Sept. 14.

Walde, Arthur W.: *See*—
Mayfield, Orley J., Moorehouse, and Walde.

Wales, Nathaniel B., assignor, by mesne assignments, to Industrial Patent Corporation, New York, N. Y. Self-opening container. 2,449,186, Sept. 14.

Walker, Brooks, Arlington, Va. Speed and odometer indicating device. 2,449,155, Sept. 14.

Wallin, Rolf: *See*—
Waugh, John A., and Wallin.

Walter, Henry A., Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. 3,5-diamino-4-hydro-thiotriazine-1-dioxide resins. 2,449,520, Sept. 14.

Walters, George C., Rocky River, Ohio. Projecting apparatus. 2,449,187, Sept. 14.

War, United States of America as represented by the Secretary of, assignee: *See*—
Bettler, Philip, and Doolittle.
Signaigo, Frank K.
Stout, Perry R., and Tull.
Witherby, Thomas H., and Farnsworth.

Ward, Blenkinsop & Company Limited, assignee: *See*—
Dickenson, Haydn G.

Warner, Samuel W.: *See*—
Pityo, Albert F., Butterfield, and Warner.

Warner, Samuel W., assignor of one-half to H. Bernstein and one-half to J. Sodowich, Newark, N. J. Soldering or welding implement. 2,449,521, Sept. 14.

Watrous, Floyd L., and G. E. Manis, Huntington, Ind. Thermostatically controlled mixing valve. 2,449,261, Sept. 14.

Waugh, John A., and R. Wallin, Charlottesville, Va., assignors to Wauregan Mills, Incorporated, Wauregan, Conn. Device for connecting yarn ends. 2,449,349, Sept. 14.

Wauregan Mills, Incorporated, assignee: *See*—
Waugh, John A., and Wallin.

Weatherhead Company, The, assignee: *See*—
Hufferd, George H., and Lindgren.

Weigel, Daniel M., Detroit, Mich. Valve arrangement for external-combustion engines. 2,449,262, Sept. 14.

Weinaug, Charles F.: *See*—
Thodos, George, and Weinaug.

Weingarten, Joseph, New York, N. Y. Cathode ray tube calibration. 2,449,093, Sept. 14.

Weiss, Eduard, Brunn, Czechoslovakia. Spinning machine. 2,449,431, Sept. 14.

Weller, Clair B., assignor of one-half to D. C. Maddux, Los Angeles, Calif. Ticket marking and attaching machine. 2,449,188, Sept. 14.

Welsford, William M., Melbourne, Victoria, Australia. Machine for manufacturing hair slides, hair pins, or the like. 2,449,263, Sept. 14.

Wertz, Hugh S., trustee, assignee: *See*—
Earle, Guyon L. C.

Western Condensing Company, assignee: *See*—
Pollard, Henry L., Rodgers, and Meade.
Rodgers, Nelson E., Pollard, and Meade.

Western Electric Company, Incorporated, assignee: *See*—
Hegeman, Andrew S., Jr., and Snook.

Westinghouse Electric Corporation, assignee: *See*—
Blackburn, Wayne E.
Cassen, Benedict.
Croco, Charles P., and Blankenbuehler.
Gulliksen, Finn H.
Harris, Walter R.
Houck, James P.
Killian, Orvel G., and Austin.
Lenehan, Bernard E.
Longini, Richard L.
Ludwig, Leon R., Fockler, and Formhals.
Lum, John C.
Penney, James H.
Pennow, Willis A., and Yungman.
Pollard, Ernest I.
Robertson, Billy P.
Russell, William J.
Strom, Albert P.

Weston Electrical Instrument Corporation, assignee: *See*—
Lamb, Anthony H.

Wheeler, Harold E., Chicago, Ill. Evaporator construction. 2,449,004, Sept. 14.

Wheeler, Harry K., Jr., assignor to Standard Oil Company, Chicago, Ill. Power recovery from catalytic conversion systems employing fluidized solids. 2,449,096, Sept. 14.

Wheeler, Harry K., Jr., and R. J. Hengstebeck, assignors to Standard Oil Company, Chicago, Ill. Catalytic conversion systems employing fluidized solids. 2,449,095, Sept. 14.

Wheeler, Jonathan C., Dayton, Ohio. Toy cannon. 2,449,432, Sept. 14.

Wheelock, Juanita K., Pleasant Ridge, Mich. Cabinet having combined slidable top and drawers. 2,449,433, Sept. 14.

White, Albert H., Washington, D. C. Artificial tooth. 2,449,522, Sept. 14.

White, Loyd J., assignor to Southern Steel Company, San Antonio, Tex. Liquefied gas dispensing system. 2,449,350, Sept. 14.

White, Loyd J., assignor to Southern Steel Company, San Antonio, Tex. Method of and apparatus for dispensing liquefied petroleum gas. 2,449,351, Sept. 14.

White, Loyd J., assignor to Southern Steel Company, San Antonio, Tex. Liquefied gas storage and dispensing system. 2,449,352, Sept. 14.

White, Paul V.: *See*—
Bennett, Charles E., and White.

White, Vernon T., assignee, et al.: *See*—
Haight, Clarence R.

Whitman, Lawrence C., Pittsfield, Mass., assignor to General Electric Company. Combination coil support and spacer. 2,449,434, Sept. 14.

Whitmore, Robert E., Keokuk, Iowa. Door latch. 2,449,353, Sept. 14.

Whittemore, Winthrop C., Port Washington, assignor to The Dentists' Supply Company of New York, New York, N. Y. Form selector for denture prosthesis. 2,449,435, Sept. 14.

Wickman, Axel C., Coventry, England. Machine for grinding toothed gear wheels and the like. 2,449,354, Sept. 14.

Wilcox-Gay Corporation, assignee: *See*—
Gay, Paul S.

Wiley, Ralph M., Midland, and E. V. Dettmer, Bay City, assignors to The Dow Chemical Company, Midland, Mich. Internal two-zone heat control for plastics extruder. 2,449,355, Sept. 14.

Wilkinson, Farley J., Homewood, Ill. Storm window. 2,449,264, Sept. 14.

Wilkoff, Howard M., New York, N. Y. Making shielded ignition leads. 2,449,356, Sept. 14.

Williams, Glenn B., Ralston, Nebr. Adjustable conduit for radiator and engine connection. 2,449,265, Sept. 14.

Williamson, Hilding V., assignor to Cardox Corporation, Chicago, Ill. Method and apparatus for preventing explosions. 2,449,436, Sept. 14.

Wilson, George P., Beaver, Pa. Stadium folding chair. 2,449,523, Sept. 14.

Winchester, Clark E., Roanoke, Ind., and H. F. Lathrop, Philadelphia, Pa., assignors to General Electric Company. Superheat control for refrigerating apparatus. 2,449,437, Sept. 14.

Wisegaver, Orton H., Los Angeles, Calif., assignor to Adel Precision Products Corp. Solenoid with plunger. 2,449,438, Sept. 14.

Witherby, Thomas H., Buffalo, N. Y., and H. E. Farnsworth, Providence, R. I., assignors to the United States of America as represented by the Secretary of War. Oscilloscope device. 2,449,524, Sept. 14.

Wittig, Carl H. O., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Adjustable pinion shaft bearing for microscopes. 2,449,156, Sept. 14.

Wittlinger, Leonard M., Linden, assignor to General Motors Corporation, Detroit, Mich. Mercury interrupter. 2,449,439, Sept. 14.

Wolff, Hanns-Heinz, Berlin, Germany; vested in the Attorney General of the United States. Electrical light impulse generator. 2,449,536, Sept. 14.

Woods, Samuel J., Newport, R. I. Foot propelled vehicle. 2,449,266, Sept. 14.

Woodworth, Donald J.: *See*—
Eglinton, George F., and Woodworth.

Woody, Albert L., Homewood, Ill. Engraving machine. 2,449,097, Sept. 14.

Young, David S., Toronto, Ontario, assignor of one-half to W. Thompson, London, Ontario, Canada. Horse tie. 2,449,189, Sept. 14.

Yungman, Elroy W.: *See*—
Pennow, Willis A., and Yungman.

Zachrich, Martin H.: *See*—
Edwards, Geraldine K., and Zachrich.

Zaiger, Louis, Swampscott, Mass. Windshield wiper. 2,449,357, Sept. 14.

Zappacosta, Amedeo D., Havertown, Pa., assignor to Radio Corporation of America. Echo sounding system with sensitivity control. 2,449,358, Sept. 14.

Zmuda, Andrew W.: *See*—
Van Degrift, Thomas C., Zmuda, and Riopelle.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Flight position and force indicating instrument. A. Z. Bendar. Re. 23,038, Sept. 14.

LIST OF DESIGN INVENTIONS

Bait, Artificial. W. L. Raschke. 151,002, Sept. 14.
Bottle opener and cork remover, Combined. F. Kahlen and P. P. Jordan. 150,957, Sept. 14.
Bowl for stock, Water. V. R. Berg. 150,917, Sept. 14.
Bracelet or similar article. A. Katz. 150,959, Sept. 14.
Bracelet or similar article. A. Katz. 150,982–3, Sept. 14.
Brooch or similar article. A. Katz. 150,960, Sept. 14.
Brooch or similar article. A. Katz. 150,962–75, Sept. 14.
Brooch or similar article. A. Katz. 150,977–8, Sept. 14.
Brooch or similar article. A. Katz. 150,981, Sept. 14.
Brooch or similar article. A. Katz. 150,985, Sept. 14.
Cabinet for sound receiving and transmitting apparatus. F. L. Meagher. 150,998, Sept. 14.
Cabinet, Sewing. E. J. Spence. 151,013, Sept. 14.
Cap. W. E. Schuessler. 151,010–11, Sept. 14.
Carrier, Golf bag. C. T. Rycraft. 151,008, Sept. 14.
Claw, Milking machine. E. Rawson. 151,003, Sept. 14.
Clip or similar article. A. Katz. 150,976, Sept. 14.
Clock and supporting easel therefor, Combined. S. J. Kaufman. 150,987, Sept. 14.
Coat. H. Goldberg. 150,945, Sept. 14.
Cradle. F. E. Kabase. 150,956, Sept. 14.
Dishwashing appliance. L. L. Anderson and R. F. Hefferan. 150,915, Sept. 14.
Dispensing machine, Beverage. L. Arnett. 150,916, Sept. 14.
Display stand unit, Sectional. N. S. Irwin. 150,954, Sept. 14.
Earring or similar article. M. Chernow. 150,927–32, Sept. 14.
Earring or similar article. A. Katz. 150,979–80, Sept. 14.
Earring or similar article. A. Katz. 150,984, Sept. 14.
Earring or similar article. A. Katz. 150,986, Sept. 14.
Fan, Electric. E. W. Fruit. 150,938, Sept. 14.
Faucet attachment. C. E. Lehman. 150,996, Sept. 14.
Fish lure. A. C. Kinard. 150,988, Sept. 14.
Fishing rod handle and reel, Combined. C. E. Hill. 150,951, Sept. 14.
Fixture, Lamp. I. I. Gotliffe. 150,946, Sept. 14.
Fixture, Lamp. F. Schwartz. 151,012, Sept. 14.
Fixture, Tube lamp. A. O. Boutelle and R. C. Kuder. 150,923, Sept. 14.
Food chopper and grinder. H. J. Kline. 150,989, Sept. 14.
Fruit reamer and strainer, Combined. C. G. Krieger. 150,990, Sept. 14.
Handle for cookstove oven doors. M. Ferar. 150,937, Sept. 14.
Handle or similar article for an automotive vehicle, Outside door. H. D. Lanve. 150,994, Sept. 14.
Hanger, Drapery. W. F. Binsack. 150,921, Sept. 14.
Hat. E. Sawtell. 151,009, Sept. 14.
Heater. F. D. Hart. 150,949–50, Sept. 14.
Heater, Portable electric. H. L. Stiles. 151,015, Sept. 14.
Housing for a space heater. H. J. Clark. 150,933, Sept. 14.
Housing, Leash reel. M. R. Grandon. 150,947, Sept. 14.
Jacket. H. Goldberg. 150,941–4, Sept. 14.
Kit, Dental supply. K. G. Van Dyk. 151,020, Sept. 14.
Lamp or the like, Desk. H. L. Goebel. 150,940, Sept. 14.
Laundry machine. F. W. Perl. 151,001, Sept. 14.
Lectern. A. T. Long. 150,997, Sept. 14.
Machine, Meat cutting. E. C. Steiner. 151,014, Sept. 14.
Mincer, Food. M. A. Besozzi. 150,920, Sept. 14.
Mophead unit, Combination. P. S. and T. S. Vosbikian. 151,021, Sept. 14.
Necklace or similar article. A. Katz. 150,961, Sept. 14.
Orange juicer and liquifying unit, Combination. B. Cooper, A. F. Hohmann, and A. Bach. 150,936, Sept. 14.
Organ, Electric. P. M. Fuller. 150,939, Sept. 14.
Ornament or similar article, Lapel. A. Bernecker. 150,918–19, Sept. 14.
Play suit. M. F. Laszlo. 150,993, Sept. 14.
Pulsator, Milking machine. E. Rawson. 151,004, Sept. 14.
Pump, Well. E. E. Theis. 151,019, Sept. 14.
Piano, Miniature. H. B. Rhodes. 151,005, Sept. 14.
Radio cabinet. R. D. Budlong. 150,925, Sept. 14.
Radio cabinet, clock, and lamp, Combined. A. C. Black. 150,922, Sept. 14.
Receptacle, Toilet roll. J. N. Wood. 151,023, Sept. 14.
Ring or similar article. A. Hoeckele. 150,952, Sept. 14.
Rocking horse. C. O. Leftwich. 150,995, Sept. 14.
Saw, Meat. E. C. Karp. 150,958, Sept. 14.
Sharpener, Knife. E. E. Jacobs. 150,955, Sept. 14.
Shield unit. Baseboard radiator. H. J. Weber and D. F. Bennett. 151,022, Sept. 14.
Spray gun, Heat fusible material. H. S. Ingham. 150,953, Sept. 14.
Sprinkler, Lawn. C. L. Russell. 151,007, Sept. 14.
Suit. S. Cohen. 150,934–5, Sept. 14.
Suit. J. F. Strassner. 151,016–18, Sept. 14.
Sun spectacles. R. L. Bright. 150,924, Sept. 14.
Swim suit. M. F. Laszlo. 150,992, Sept. 14.
Swim suit, Two-piece. M. F. Laszlo. 150,991, Sept. 14.
Table, Drop-leaf extension. C. E. Millspaugh. 151,000, Sept. 14.
Temple for spectacles or similar article, Nonmetallic. J. E. Hansen. 150,948, Sept. 14.
Transport airplane. V. J. Burnelli. 150,926, Sept. 14.
Vehicle, Motor. G. Miller and M. Sinderman. 150,999, Sept. 14.
Vehicle cab, Motor power. E. Rossner. 151,006, Sept. 14.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid chromable monoazo dyestuffs and a process of making same. A. Krebser and W. Kuster. 2,449,130, Sept. 14.
Acid tars, Treatment of. R. J. Miller. 2,449,404, Sept. 14.
Adapter for spot welding machines. E. Crabtree. 2,449,455, Sept. 14.
Adjustable support. E. A. Black. 2,449,049, Sept. 14.
Agricultural machine. E. B. Dewey. 2,449,062, Sept. 14.
Airborne anesthetizing apparatus. J. A. Heidbrink. 2,449,165, Sept. 14.
Air propelled top. J. R. Mordan. 2,449,405, Sept. 14.
Alarm system, Supervisory electrical. A. H. Lamb. 2,449,304, Sept. 14.
Alkenyl sulfolanyl and sulfolenyl carbonates. R. C. Morris and E. C. Shokal. 2,449,173, Sept. 14.
Alpha,alpha-dialkyl beta-chloro-propionic acids, The preparation of. T. A. Ford. 2,449,163, Sept. 14.
Analysis by fluorescent X-ray excitation. H. Friedman. 2,449,066, Sept. 14.
Anchors for lading retaining bands for open-top railway cars. B. R. Jones. 2,449,300, Sept. 14.
Anode. P. R. Pine. 2,449,504, Sept. 14.
Antenna supply phase and amplitude control. W. J. O'Brien. 2,449,174, Sept. 14.
Antidiabetic substance from pancreas, Extracting. C. L. Lautenschlager and F. Lindner. 2,449,076, Sept. 14.
Apparatus for attaching heels to shoes. E. F. Small. 2,449,333, Sept. 14.
Apparatus for cooling the interiors of containers. H. W. Kleist. 2,449,127, Sept. 14.
Apparatus for forging. W. F. Bober and F. E. Sebring. 2,449,365, Sept. 14.
Apparatus for forming grinding wheels. D. E. Mulholland. 2,449,407, Sept. 14.
Apparatus for making hollow plastic articles. C. Scheuer. 2,449,512, Sept. 14.
Apparatus for manufacturing and filling capsules. K. Posner. 2,449,139, Sept. 14.
Apparatus for plating sheet metal. H. Sebell. 2,449,329, Sept. 14.
Apparatus for protecting inflammable liquids against fire. C. E. Bennett. 2,449,270, Sept. 14.
Apparatus for rolling steel barrel chimes. E. O. Dryer and A. H. Meisenheimer, Jr. 2,449,206, Sept. 14.
Apparatus selectively operable as a press or as a drop hammer. R. J. Lindsey. 2,449,401, Sept. 14.
Application of phosphate protective coatings to nonferrous metals. J. C. Lum. 2,449,495, Sept. 14.
Applicators for liquid medicinal preparations. E. A. H. King. 2,449,125, Sept. 14.
Apron. H. L. Brown. 2,449,448, Sept. 14.
Arc welding control system. C. P. Croco and J. H. Blankenbuehler. 2,449,456, Sept. 14.
Armor, Nonmagnetic. I. R. Kramer. 2,449,075, Sept. 14.
Aromatic hydrocarbons from a hydrocarbon mixture, Separating. M. R. Lipkin and A. E. Hirschler. 2,449,402, Sept. 14.
Aryl esters of tertiary carbamic acid. J. A. Aeschlimann. 2,449,440, Sept. 14.
Aspirator tip, Combination. W. W. McLeod. 2,449,497, Sept. 14.
Automatic adhesive tape dispenser. A. A. Anderson. 2,449,047, Sept. 14.
Automatic hydraulic jack. C. R. Haight. 2,449,296, Sept. 14.
Automatic water valve. E. L. Halverson. 2,449,474, Sept. 14.
Autoregenerative catalysts, Preparation of. C. L. Gutzeit. 2,449,295, Sept. 14.
Baby chick shipping box. R. R. Harness. 2,449,222, Sept. 14.
Balancing machine. T. C. Van Degrift, A. W. Zmuda, and E. F. Riopelle. 2,449,429, Sept. 14.
Balancing system, Automatic fluid pressure. F. W. Hoffer. 2,449,297, Sept. 14.
Band, Adjustable flexible. N. Bisso. 2,449,273, Sept. 14.
Bag: *See*—
  Tire curing bag.
  Vacuum cleaner bag.
Beam-splitting prism, Polarizing. M. M. Flood. 2,449,287, Sept. 14.
Beehive. R. H. Volgenau and J. M. Hooe. 2,449,348, Sept. 14.
Belt tightening and tracking device. D. E. Sutton. 2,449,519, Sept. 14.
Bending machine with pivoted bender carrying a work supporting arm. W. E. Pettersen. 2,449,409, Sept. 14.
Bezel dop and grinding device. J. H. Spira. 2,449,423, Sept. 14.
Block: *See*—
  Glass building block.
Blocking voltage in current converter valves, Influencing the. U. Lamm. 2,449,396, Sept. 14.
Board pry. E. L. Krieg. 2,449,393, Sept. 14.
Bobbin lock. W. J. Vaillancourt. 2,449,258, Sept. 14.
Bookmark. J. H. Forsyth. 2,449,211, Sept. 14.
Bookmark. E. Polak. 2,449,319, Sept. 14.
Bottle cap. P. Gavriles. 2,449,290, Sept. 14.
Bottle capper. R. P. Craig and J. W. Norgauer. 2,449,161, Sept. 14.
Box: *See*—
  Baby chick shipping box.
Brace, Rail. G. S. Vickroy. 2,449,260, Sept. 14.
Bracket: *See*—
  Holddown bracket.
Brake or the like frictionally engageable structure. W. H. Hunter. 2,449,383, Sept. 14.
Braking device for electric motors. B. M. Hayman. 2,449,223, Sept. 14.
Buffing mechanism, Car-end platform. R. J. Olander. 2,449,135, Sept. 14.
Building structure. W. Gillett and E. A. Miller. 2,449,292, Sept. 14.
Bullet loosening improvements in cartridge disassembling machines. F. E. Costello. 2,449,059, Sept. 14.
Buoyant ground station. A. B. Schultz. 2,449,417, Sept. 14.
Cabinet: *See*—
  Multiple unit freezer cabinet.
Cabinet construction, Refrigerator. T. W. Rundell. 2,449,415, Sept. 14.
Cabinet having combined slidable top and drawers. J. K. Wheelock. 2,449,433, Sept. 14.
Cap: *See*—
  Bottle cap.
Carbon holder. R. L. Transon. 2,449,341, Sept. 14.
Carbon monoxide and hydrogen from methane, Manufacture of. A. J. Abrams, M. H. Gorin, and C. O. Baker. 2,449,359, Sept. 14.
Carrier: *See*—
  Wrist-attached article carrier.
Catalyst for the synthesis of hydrocarbons. C. O. Hawk, N. R. Stern, and L. J. E. Hofer 2,449,071, Sept. 14.
Catalytic conversion of hydrocarbons with a cerium phosphate catalyst. G. R. Bond, Jr., and G. A. Mills. 2,449,050, Sept. 14.
Catalytic conversion systems employing fluidized solids. H. K. Wheeler, Jr., and R. J. Hengstebeck. 2,449,095, Sept. 14.
Cathead. O. M. Gahagan. 2,449,376, Sept. 14.
Cathode-ray tube. G. C. Sziklai. 2,449,339, Sept. 14.
Chair: *See*—
  Stadium folding chair.
Chair seat. W. E. Nordmark. 2,449,500, Sept. 14.
Chemical reactivity and adsorptive capacity of lignin from wood saccharification, Improving. E. Farber and M. Sciascia. 2,449,209, Sept. 14.
Child's toilet seat. L. B. Mellichampe. 2,449,498, Sept. 14.
Churn support. A. H. Boileau. 2,449,446, Sept. 14.
Circuit: *See*—
  Tuning indicator for indicating resonance of an electric circuit.
  Wattmeter circuit.
Circuit breaker. E. Eichenberger. 2,449,208, Sept. 14.
Circuit breaker. O. G. Killian and B. O. Austin. 2,449,486, Sept. 14.
Circuit control means for motor vehicles. E. E. Summerset. 2,449,338, Sept. 14.
Circuit interrupter. A. P. Strom. 2,449,518, Sept. 14.
Circuit protector. L. H. Lamont. 2,449,236, Sept. 14.
Clamping mechanism. R. L. McBride. 2,449,172, Sept. 14.
Claw, Pickup. J. H. Kroll. 2,449,487, Sept. 14.
Cleaning and buffing machine, Air-bag. J. E. Johnson. 2,449,387, Sept. 14.
Cleaning device, Sponge. F. L. Dalton. 2,449,281, Sept. 14.
Clothesline support. F. J. Hencir. 2,449,379, Sept. 14.
Coal cutting bit and holder therefor. F. L. Fulke. 2,449,288, Sept. 14.
Coating for use in manicuring, Protective. E. Hauser and P. Kovol. 2,449,070, Sept. 14.
Coaxial line connector. J. D. Johannesen. 2,449,073, Sept. 14.

Coiffure for dolls. B. B. Petschauer. 2,449,248, Sept. 14.
Coil support and spacer, Combination. L. C. Whitman. 2,449,434, Sept. 14.
Coloured images by means of aryl hydrazones of glyoxylic acid amide, Forming. J. D. Kendall and H. G. Suggate. 2,449,388, Sept. 14.
Comb. A. L. Voight. 2,449,430, Sept. 14.
Communication system employing pulse code modulation. W. M. Goodall. 2,449,467, Sept. 14.
Commutator apparatus. N. E. Lindenblad. 2,449,078, Sept. 14.
Commutators, Manufacturing. G. L. Moeller. 2,449,309, Sept. 14.
Composition for control of poultry coccidiosis. O. J. Mayfield, N. F. Morehouse, and A. W. Walde. 2,449,080–1, Sept. 14.
Composition of phenol-rubber and resorcinol-formaldehyde. H. E. Schroeder. 2,449,180, Sept. 14.
Compound for fishing bait. I. F. Richardson. 2,449,322, Sept. 14.
Compressor. J. Naab. 2,449,408, Sept. 14.
Condenser: *See*—
High voltage condenser.
Conduit for radiator and engine connection, Adjustable. G. B. Williams. 2,449,265, Sept. 14.
Connecting means for shaker conveyer troughs. L. D. Hagenbook. 2,449,473, Sept. 14.
Connector: *See*—
Coaxial line connector. Separable connector.
Electrical connector.
Container: *See*—
Dispensing container. Self-opening container.
Container for bombs. W. J. Russell. 2,449,511, Sept. 14.
Control fitting for liquefied petroleum gas tanks. J. R. Holicer. 2,449,119, Sept. 14.
Control mechanism. H. G. Shakespeare and W. R. Gerry. 2,449,516, Sept. 14.
Control structure, Selective hydraulic. E. W. Austin. 2,449,269, Sept. 14.
Control system for aircraft landing gear and landing flaps, Remote. P. R. Murray. 2,449,084, Sept. 14.
Control system for airports, Lighting. J. P. Houck. 2,449,480, Sept. 14.
Control systems for synchronous motors. L. Freinkel. 2,449,065, Sept. 14.
Conversion of hydrocarbons in the presence of a catalyst comprising alumina and an oxyfluoride of beryllium, titanium or zirconium. S. M. Darling. 2,449,061, Sept. 14.
Converter, Power. N. E. Lindenblad. 2,449,077, Sept. 14.
Conveyer. L. Cieslak. 2,449,278, Sept. 14.
Conveyer. B. Henricksen. 2,449,117, Sept. 14.
Conveying mechanism. E. Martin. 2,449,240, Sept. 14.
Cooking utensil combination. E. Kolehmainen and H. S. Baird. 2,449,129, Sept. 14.
Cooling system for internal-combustion engines. P. W. Eells. 2,449,110, Sept. 14.
Copolymers of monovinylphenoxthines and preparing the same. R. G. and L. W. Flowers. 2,449,528, Sept. 14.
Copper oxide rectifier. R. H. Clapp. 2,449,453, Sept. 14.
Cord adjusting and storage device. G. W. Eypper. 2,449,464, Sept. 14.
Cord holder. C. P. Krupp. 2,449,235, Sept. 14.
Cotton cordage, Producing. C. F. Goldthwait and H. O. Smith. 2,449,215, Sept. 14.
Coupling: *See*—
Pipe coupling.
Coupling device for use in toy railroads. A. D. Gash, Jr. 2,449,466, Sept. 14.
Coupling means for use with calculating, bookkeeping, or like machines. R. Hofgaard. 2,449,228, Sept. 14.
Cyclic lactones, The production of. H. Dickenson. 2,449,162, Sept. 14.
Deflecting circuits. L. R. Kirkwood and P. F. G. Holst. 2,449,169, Sept. 14.
Deicing system for propeller blades. G. A. Dean. 2,449,457, Sept. 14.
Dental chair unit. C. W. Johnson and J. T. Clark. 2,449,385, Sept. 14.
Design-mold for treating fur. A. L. Foster. 2,449,111, Sept. 14.
Device for conference calls in subscribers' devices for loud and faintly audible traffic. O. Tschumi. 2,449,344, Sept. 14.
Device for connecting yarn ends. J. A. Waugh and R. Wallin. 2,449,349, Sept. 14.
Device for demonstrating the action of the front wheels of automobiles. S. R. Milburn. 2,449,499, Sept. 14.
Device for mending stockings. M. Vitoux. 2,449,154, Sept. 14.
Device for transforming direct current into alternating current or vice versa. P. N. Bendixen. 2,449,048, Sept. 14.
Die assembly and rubber insert for flanging sheet metal. A. A. Timmons. 2,449,428, Sept. 14.
Die casting machine. W. Coulthard. 2,449,280, Sept. 14.
Direct-current measuring apparatus, Sensitive. T. A. Rich. 2,449,413, Sept. 14.
Discharge means for spray driers, Vibrating conical. W. S. Bowen and W. I. McCrum. 2,449,366, Sept. 14.
Dispenser: *See*—
Automatic adhesive tape dispenser.
Dispensing apparatus for strip material. C. L. Reynolds. 2,449,508, Sept. 14.
Dispensing container. W. L. Barnes and J. J. Harrison. 2,449,046, Sept. 14.
Display apparatus. R. A. Lambert. 2,449,530, Sept. 14.
Display device embodying hinged or pivoted members simulating book leaves. A. C. Erisman. 2,449,462, Sept. 14.
Display page for coins and other objects. C. G. Curtis. 2,449,204, Sept. 14.
Distortion in butt-welded plates, Preventing. L. P. McCabe. 2,449,082, Sept. 14.
Door and closure holder. F. Johnson. 2,449,386, Sept. 14.
Door latch. R. E. Whitmore. 2,449,353, Sept. 14.
Draining device, Fluid. H. D. Daigle. 2,449,060, Sept. 14.
Draw bar for trailer couplings, Adjustable. A. Partin. 2,449,315, Sept. 14.
Drier: *See*—
Hair drier.
Drip pan, Flush tank. H. Bodan. 2,449,445, Sept. 14.
Driver, Tap. H. P. Boggis. 2,449,103, Sept. 14.
Driving means for looms. W. H. Bahan. 2,449,157, Sept. 14.
Dynamoelectric machine, Fan-cooled. L. R. Ludwig, T. C. Fockler, W. H. Formhals, and H. T. Walton. 2,449,494, Sept. 14.
Echo sounding system with sensitivity control. A. D. Zappacosta. 2,449,358, Sept. 14.
Electric discharge device. H. F. Fruth. 2,449,113, Sept. 14.
Electric discharge tube base. P. H. Fennema, J. G. Kronouer, and F. Prakke. 2,449,374, Sept. 14.
Electric field or potential indicator. R. Gunn. 2,449,068, Sept. 14.
Electric lamp. W. J. Allphin. 2,449,268, Sept. 14.
Electric relay. O. I. Price. 2,449,086, Sept. 14.
Electric system. H. E. Edgerton. 2,449,063, Sept. 14.
Electrical alarm system. J. J. Kertz. 2,449,168, Sept. 14.
Electrical circuit control. A. S. Hegeman, Jr., and H. N. Snook. 2,449,224, Sept. 14.
Electrical connection. F. J. Mantan. 2,449,496, Sept. 15.
Electrical connection, Rotatable. D. M. Phillips. 2,449,138, Sept. 14.
Electrical connector. V. E. Carlson. 2,449,450, Sept 14.
Electrical contacts. S. D. Hopper and E. H. H. Hassler. 2,449,479, Sept. 14.
Electrical light impulse generator. H. Wolff. 2,449,536, Sept. 14.
Electrical spark gap. R. W. Lamphere. 2,449,397, Sept. 14.
Electrical testing device. F. W. Clayden. 2,449,057, Sept. 14.
Electrode holder. T. S. Donnelly. 2,449,370, Sept. 14.
Electrode system. P. A. W. M. Sleegers. 2,449,420, Sept. 14.
Electrodeposition of nickel. L. N. Smith. 2,449,422, Sept. 14.
Electromagnetically controlled switch. H. J. Hammerly. 2,449,221, Sept. 14.
Eliminator, Flash steam. C. C. Carson. 2,449,055, Sept. 14.
End brush and making. J. B. Benyak. 2,449,158, Sept. 14.
Engraving machine. A. L. Woody. 2,449,097, Sept. 14.
Enhancing the yield of vitamins in fermentations. H. L. Pollard, N. E. Rodgers, and R. E. Meade. 2,449,140, Sept. 14.
Error reduction device, Conical scanning. P. R. Stout and W. J. Tull. 2,449,517, Sept. 14.
Ether ester, Preparation of. R. E. Brooks. 2,449,447, Sept. 14.
Ether esters, Preparation of. W. F. Gresham. 2,449,471, Sept. 14.
Evaporator construction. H. E. Wheeler. 2,449,094, Sept. 14.
Expansible fish hook. F. P. Athans. 2,449,045, Sept. 14.
Explosion-proof lamp. J. R. Bell, L. D. Stacy, and I. E. Dischinger, Jr. 2,449,362, Sept. 14.
External anode power amplifier and oscillator tube. C. R. Stevens. 2,449,256, Sept. 14.
Fan-cooled motor. J. H. Penney. 2,449,502, Sept. 14.
Fastener: *See*—
Head and socket separable safety fastener.
Feathering of propellers responsive to yaw control, Facilitating the. M. Burcham. 2,449,104, Sept. 14.
Feeder: *See*—
Soap feeder.
Feeder means, Blank. G. A. Anderson. 2,449,044, Sept. 14.
Feeding apparatus, Fuel. W. S. Landon. 2,449,237, Sept. 14.
Feeding device having flexible tubular wall, with compound motion for peripheral discharge. E. E. Lakso. 2,449,395, Sept. 14.
Feeding device, Thread. S. J. Ketterer. 2,449,302, Sept. 14.

Fermentation method for preparing a vitamin concentrate. H. L. Pollard, N. E. Rodgers, and R. E. Meade. 2,449,143, Sept. 14.
Film tank. W. W. Boes. 2,449,199, Sept. 14.
Filtration apparatus. C. L. Lightfoot, Jr. 2,449,238, Sept. 14.
Floor mat. J. E. Flaker. 2,449,465, Sept. 14.
Foam prevention in extractive distillation of hydrocarbons with furfural solvent. G. Thodos and C. F. Weinaug. 2,449,427, Sept. 14.
Follow-up servomotor. R. J. Lindsey. 2,449,400, Sept. 14.
Foot propelled vehicle. S. J. Woods. 2,449,266, Sept. 14.
Form selector for denture prosthesis. W. C. Whittemore. 2,449,435, Sept. 14.
Forming parts from powdered metal. R. P. Seelig. 2,449,515, Sept. 14.
Frame: *See*—
Ring spinning frame.
Frame for gauze weaving looms, Needle. M. Banyai. 2,449,100, Sept. 14.
Friction supporting device, Adjustable. F. C. Stieber. 2,449,424, Sept. 14.
Fuel injection device. R. Huber. 2,449,382, Sept. 14.
Fuel injection mechanism. L. E. Johnson. 2,449,120, Sept. 14.
Fuel injection system for internal-combustion engines. L. S. Greenland. 2,449,468, Sept. 14.
Fuel injector control dial gauge. R. W. Petersen. 2,449,137, Sept. 14.
Fur fabric, Artificial. M. J. Schifrin. 2,449,416, Sept. 14.
Fuse, Bomb. J. B. MacLean and M. E. Schlenker. 2,449,170, Sept. 14.
Gantry. L. C. Oertle. 2,449,501, Sept. 14.
Garter. P. J. Stiger. 2,449,425, Sept. 14.
Gas analyzer. C. Johnson. 2,449,485, Sept. 14.
Gas analyzer, Constant flow. V. Guillemin, Jr. 2,449,067, Sept. 14.
Gas dispensing system, Liquefied. L. J. White. 2,449,350, Sept. 14.
Gas storage and dispensing system, Liquefied. L. J. White. 2,449,352, Sept. 14.
Gauge: *See*—
Fuel injector control dial gauge.
Gel spheroids, Preparation of hollow. E. L. Sargent. 2,449,253, Sept. 14.
Generator: *See*—
Electrical light impulse generator.
Glass building block. N. C. Dryden. 2,449,458, Sept. 14.
Glass channel retainer, Automobile door. C. C. Faust. 2,449,210, Sept. 14.
Glass having low power factor. W. H. Amistead. 2,449,099, Sept. 14.
Golf bag stand. D. Matthews. 2,449,171, Sept. 14.
Greases, Block. G. W. Murray and C. D. Thayer. 2,449,312, Sept. 14.
Grinding fixture, Perforator. T. Eckert. 2,449,459, Sept. 14.
Grooving machine, Shoe shank. A. Rayon. 2,449,321, Sept. 14.
Ground connecting device. A. H. Naef. 2,449,313, Sept. 14.
Guardrail, Safety. F. Schaefer. 2,449,326, Sept. 14.
Hair curler, Ringlet. F. Interrante. 2,449,301, Sept. 14.
Hair drier. O. D'Emilio. 2,449,205, Sept. 14.
Halogenated fluoroalkanes, Preparation of highly. P. R. Austin. 2,449,360, Sept. 14.
Hammer, Drop. T. C. Cooke. 2,449,454, Sept. 14.
Hand operated leather punching machine. G. P. Carlock. 2,449,108, Sept. 14.
Head and socket separable safety fastener. L. H. Hopewell. 2,449,167, Sept. 14.
Heads for paper winding reels, Adjustable. L. Leas. 2,449,398, Sept. 14.
Heater: *See*—
Oscillating fan heater.
Hearing aid and heat deflector for hair driers. G. K. Edwards and M. H. Zachrich. 2,449,460, Sept. 14.
Heat control for plastics extruders, Internal two-zone. R. M. Wiley and E. V. Dettmer. 2,449,355, Sept. 14.
Heat exchanger. J. W. Brown, Jr. 2,449,052, Sept. 14.
Heat-treating apparatus. H. E. Somes. 2,449,089, Sept. 14.
Heating apparatus, High-frequency dielectric. B. Cassen. 2,449,451, Sept. 14.
Heel construction, Ski boot. A. Guindon. 2,449,294, Sept. 14.
High-pressure petroleum gas dispensing method and apparatus. J. R. Holicer. 2,449,118, Sept. 14.
High voltage condenser. B. B. Minnium. 2,449,308, Sept. 14.
Holddown bracket. F. J. Burns. 2,449,275, Sept. 14.
Holder: *See*—
Carbon holder. Tube holder.
Cord holder. Window blind and curtain rod holder.
Door and closure holder.
Electrode holder.
Holder for fluorescent lamps. E. R. Kulka. 2,449,394, Sept. 14.
Holder for opaque picture projectors, Object. W. W. Frost. 2,449,112, Sept. 14.
Hook: *See*—
Expansible fish hook.
Horse tie. D. S. Young. 2,449,189, Sept. 14.
Hose connection, Air. J. J. Nelson. 2,449,245, Sept. 14.
Hose, Flexible metal. L. B. Doane and F. B. Bentley. 2,449,369, Sept. 14.
Hosiery protector. F. L. Harriman. 2,449,115, Sept. 14.
Hydraulic actuating mechanism for dump trucks. H. O. Day. 2,449,202, Sept. 14.
Hydrocarbon conversion process. B. L. Evering and A. P. Lien. 2,449,463, Sept. 14.
Hydrogen bromide-catalyzed oxidation of organic compounds. W. E. Vaughan and F. F. Rust. 2,449,347, Sept. 14.
Ignition leads, Making shielded. H. M. Wilkoff. 2,449,356, Sept. 14.
Image attenuation circuits, Permeability tuned. W. F. Sands. 2,449,148, Sept. 14.
Imidazolines. K. Miescher and W. Klarer. 2,449,241, Sept. 14.
Impeller, N. Lee, Jr. 2,449,531, Sept. 14.
Indicator: *See*—
Electric field or potential indicator. Recording apparatus volume level indicator.
Indicator device for ordinary two prong plugs, Portable. N. Schnoll. 2,449,150, Sept. 14.
Indicator system for towed gliders. G. F. Leydorf. 2,449,532, Sept. 14.
Induction heating of rotatable blade assemblies and the like. W. C. Rudd and R. J. Stanton. 2,449,325, Sept. 14.
Integrator. E. E. Moreau. 2,449,310, Sept. 14.
Ironing apparatus, Electrostatic. E. C. Pitman and E. L. Crandell. 2,449,318, Sept. 14.
Ironing machine. H. E. Page. 2,449,246, Sept. 14.
Jar, Canning. H. Pfleumer. 2,449,316, Sept. 14.
Jack: *See*—
Automatic hydraulic jack.
Joint structures for cables. C. E. Bennett and P. V. White. 2,449,271, Sept. 14.
Kingpin assembly. J. W. Leighton. 2,449,306, Sept. 14.
Knitting of shaped fabrics. J. Held and H. Scheer. 2,449,477, Sept. 14.
Lamp: *See*—
Electric lamp. Explosion-proof lamp.
Lamp and a support therefor. K. C. Richter. 2,449,250, Sept. 14.
Lamp conductor contact. R. N. Falge and W. T. Mears. 2,449,373, Sept. 14.
Land and water vehicle. G. Raimondi. 2,449,320, Sept. 14.
Lasting machine. B. Jorgensen. 2,449,122, Sept. 14.
Latch: *See*—
Door latch. Safety latch.
Latching device. E. M. Kealy. 2,449,074, Sept. 14.
Leak detector. H. L. Burns and J. H. Thomas. 2,449,053, Sept. 14.
Lectern. A. T. Long. 2,449,492, Sept. 14.
Leveling and aligning means. A. M. Guillet. 2,449,219, Sept. 14.
Light control, Bicycle rear. R. Boucher. 2,449,200, Sept. 14.
Lighter. J. F. Rogers. 2,449,414, Sept. 14.
Lighter, Cigar. W. I. Nissen. 2,449,314, Sept. 14.
Locating and positioning foot corrective appliances. W. M. Scholl. 2,449,535, Sept. 14.
Lock: *See*—
Bobbin lock.
Locking chase structure, Adjustable form. H. J. Hilland. 2,449,381, Sept. 14.
Lubricants. B. P. Robertson. 2,449,510, Sept. 14.
Lubricating composition. C. L. Gebauer. 2,449,114, Sept. 14.
Machine for grinding toothed gear wheels and the like. A. C. Wickman. 2,449,354, Sept. 14.
Machine for manufacturing hair slides, hair pins or the like. W. M. Welsford. 2,449,263, Sept. 14.
Machine for producing cathode sleeves for thermionic valves. A. F. Pityo, H. Butterfield, and S. W. Warner. 2,449,505, Sept. 14.
Machine for testing clutch and brake assemblies. R. G. Starling. 2,449,091, Sept. 14.
Machine for treating hides, skins, and leather. C. D. Knowlton and D. Edgar. 2,449,128, Sept. 14.
Magnesium compounds, Production of. G. H. Gloss and E. B. Baker. 2,449,293, Sept. 14.
Marking and attaching machine, Ticket. C. B. Weller. 2,449,188, Sept. 14.
Measuring device, Fluid mass. J. H. Cantlin. 2,449,054, Sept. 14.
Mechanical shorthand writing means. W. V. Kirkpatrick. 2,449,126, Sept. 14.
Mercury interrupter. L. M. Wittlinger. 2,449,439, Sept. 14.
Method and apparatus for preventing explosions. H. V. Williamson. 2,449,436, Sept. 14.
Method and means for welding pipes and the like. E. Dutch. 2,449,371, Sept. 14.
Method of and apparatus for dispensing liquefied petroleum gas. L. J. White. 2,449,351, Sept. 14.
Method of and apparatus for setting self-synchronous machines on zero. G. A. Muir. 2,449,083, Sept. 14.

Method of and machine for applying labels. W. Hoppe. 2,449,298, Sept. 14.
Method of and molds for casting vitreous water closet bowls. J. W. Pieslak and R. E. Crane. 2,449,249, Sept. 14.
Microwave-acoustic light valve. W. D. Hershberger. 2,449,166, Sept. 14.
Milk delivery tube. J. A. Hopwood. 2,449,229, Sept. 14.
Milling machine. E. Bugatti. 2,449,449, Sept. 14.
Milling machine. O. W. Scharping. 2,449,179, Sept. 14.
Molds, Making. H. J. Pattison. 2,449,136, Sept. 14.
Mortar charge. C. N. Hickman. 2,449,380, Sept. 14.
Motor: *See*—
Fan-cooled motor.
Mounting for rotary cylinders, Riding ring. R. Bernhard. 2,449,198, Sept. 14.
Multiple unit freezer cabinet. L. W. Barley. 2,449,101, Sept. 14.
Musical instrument. A. H. Kimmons. 2,449,124, Sept. 14.
N-alkenyl phenylacetamides. O. K. Behrens and Q. F. Soper. 2,449,192, Sept. 14.
N-dihydroxypropyl phenylacetamide. O. K. Behrens and J. W. Corse. 2,449,194, Sept. 14.
Navigation computer, Plotting aircraft. G. E. Tardif. 2,449,342, Sept. 14.
Nonremovable transparent identification band with a tag therein. J. R. Smiley. 2,449,181, Sept. 14.
Nonskid device for crutches and the like. S. H. Richards. 2,449,509, Sept. 14.
Nozzle for use in welding, Cooling. R. C. Gupton. 2,449,220, Sept. 14.
Nut, Coupling. N. A. Jones. 2,449,121, Sept. 14.
Octa-chloro-biphenyl quinone. F. D. Smith. 2,449,088, Sept. 14.
Oil thrower and crankpin lubricating device, Crankcase. F. G. Hobart. 2,449,227, Sept. 14.
Oil well packer. W. E. Scoville, Jr. 2,449,514, Sept. 14.
Oils from acid sludges resulting from the sulfuric acid purification of coal tar distillates, Making. H. L. Allen and G. J. Skriver. 2,449,098, Sept. 14.
1,3-dihalopropylenes, Production of. A. W. Fairbairn. 2,449,286, Sept. 14.
Optical system with parallel plate refractive element, Schmidt type. P. M. van Alphen. 2,449,259, Sept. 14.
Oral fluoride-vitamin preparation. L. P. Strean. 2,449,184, Sept. 14.
Oscillating fan heater. L. B. Green. 2,449,377, Sept. 14.
Oscillation reducing device. F. M. M. B. Salomon. 2,449,087, Sept. 14.
Oscilloscope device. T. H. Whitherby and H. E. Farnsworth. 2,449,524, Sept. 14.
Packaging. E. L. Smith. 2,449,334, Sept. 14.
Packing of lettuce and package. A. B. Haslacher. 2,449,164, Sept. 14.
Paints, Silicate. W. G. Vannoy. 2,449,346, Sept. 14.
Pen, Ball point. F. E. Gruber. 2,449,218, Sept. 14.
Phenacetylaminomethylcrotonic acid. O. K. Behrens. 2,449,191, Sept. 14.
Photographic silver bromide emulsion sensitized with cysteine. F. Urbach. 2,449,153, Sept. 14.
Picture viewing apparatus, Animated. J. F. Iwick. 2,449,483, Sept. 14.
Pilot valve for combined temperature and pressure control apparatus. J. L. Kimball and R. C. Earley. 2,449,123, Sept. 14.
Planer construction. H. N. Buss. 2,449,201, Sept. 14.
Plasticized and stabilized cellulose compound and making it. O. Santoro and E. Jaskot. 2,449,149, Sept. 14.
Plasticizing and vulcanization of butadiene-acrylic nitrile copolymer. L. Coes, Jr. 2,449,058, Sept. 14.
Plywood tubing, Manufacturing. J. J. Dunne and O. S. Tuttle. 2,449,526, Sept. 14.
Pole tip structure for salient pole synchronous machines. E. I. Pollard. 2,449,506, Sept. 14.
Polyformals, Preparation of. W. F. Gresham and R. E. Brooks. 2,449,469, Sept. 14.
Polymeric ethylene emulsions, Preparation of. A. T. Larson. 2,449,489, Sept. 14.
Polymerization of polyhydric alcohol esters of alpha-olefinic dicarboxylic acids with ethylenic monomers, Controlling. E. C. Hurdis. 2,449,299, Sept. 14.
Polymers of monovinylphenoxthines and preparing the same. R. G. and L. W. Flowers. 2,449,527, Sept. 14.
Portable indicator device for ordinary two prong plugs. N. Schnoll. 2,449,150, Sept. 14.
Post lock for loose-leaf binders, Sectional. W. Shoda. 2,449,331, Sept. 14.
Powder box having sealing ring. G. R. Bent. 2,449,196, Sept. 14.
Power lift for grain drills. J. H. Starr. 2,449,183, Sept. 14.
Power recovery from catalytic conversion systems employing fluidized solids. H. K. Wheeler, Jr. 2,449,096, Sept. 14.
Preparation of fluorine-containing cyclic hydrocarbons, The. A. D. Kischitz, C. I. Gochenour, and R. E. Brailsford. 2,449,233, Sept. 14.
Press. F. Lyijynen. 2,449,133, Sept. 14.
Press for powdered metals. W. R. Tucker. 2,449,257, Sept. 14.
Pressing apparatus, Electrostatic. E. C. Pitman. 2,449,317, Sept. 14.
Pressure control, Aircraft cabin. J. Jerger. 2,449,231, Sept. 14.
Pressure device and actuating fluid therefor, Hydraulic. F. J. Sowa. 2,449,335, Sept. 14.
Printing ink containing a lignin compound, Liquid. C. E. Irion. 2,449,230, Sept. 14.
Process and culture media for producing penicillin. O. K. Behrens and J. W. Corse. 2,449,195, Sept. 14.
Process and culture medium for producing penicillin. O. K. Behrens, R. G. Jones, and Q. F. Soper. 2,449,193, Sept. 14.
Profiling device. C. O. Rothweiler. 2,449,252, Sept. 14.
Projecting apparatus. G. C. Walters. 2,449,187, Sept. 14.
Propeller governor. C. W. Chillson. 2,449,452, Sept. 14.
Protective device for horses' legs. J. Polinsky. 2,449,410, Sept. 14.
Protector: *See*—
Circuit protector.
Hosiery protector.
Pulsator system. A. E. Kremiller. 2,449,392, Sept. 14.
Pulse modulator for multichannel transmitter, Line. P. Bettler and H. D. Doolittle. 2,449,443, Sept. 14.
Pump controlled hydraulic cylinder system, Reversible. G. H. Hufferd. 2,449,482, Sept. 14.
Pump flange, Self-aligning. P. B. Miller. 2,449,243, Sept. 14.
Quaternary ammonium bacteriocidal composition, Self-indicating. H. R. Broll. 2,449,274, Sept. 14.
Quick action switch. R. J. Domonkas. 2,449,109, Sept. 14.
Rack attachment for laundry tubs. L. W. Larson. 2,449,131, Sept. 14.
Radio direction finder. W. J. O'Brien. 2,449,175, Sept. 14.
Rail tool. E. D. Jones. 2,449,232, Sept. 14.
Recall control means. F. T. Pascoe and A. L. Jerome. 2,449,176, Sept. 14.
Receptor, Sheet-metal. F. H. Richterkessing. 2,449,323, Sept. 14.
Recorder with magnetically positioned electric indicator. P. H. Dike and E. D. Doyle. 2,449,283, Sept. 14.
Recording apparatus volume level indicator. P. S. Gay. 2,449,291, Sept. 14.
Rectifier, Selenium. W. E. Blackburn. 2,449,444, Sept. 14.
Reed device, Polarized. F. H. Gulliksen. 2,449,472, Sept. 14.
Refining of petroleum hydrocarbon products, Liquid phase. F. W. Breth and A. Kinsel. 2,449,051, Sept. 14.
Refrigeration apparatus. V. V. Torbensen. 2,449,343, Sept. 14.
Refrigerator for making and using crushed ice. L. V. Lucia. 2,449,132, Sept. 14.
Refrigerator mullion construction for preventing condensation. W. E. Hursey and G. Strunk. 2,449,384, Sept. 14.
Regulating apparatus. E. W. Graham. 2,449,217, Sept. 14.
Regulating system. W. R. Harris. 2,449,475, Sept. 14.
Reinforcement, Pretensioned. M. Chalos. 2,449,276, Sept. 14.
Relaying system. B. E. Lenehan. 2,449,490, Sept. 14.
Remote control system, Bidirectional selective. L. Kogane. 2,449,391, Sept. 14.
Resistivity of P-type crystals, Controlling the. H. Jaffe. 2,449,484, Sept. 14.
Rest holder for centerless grinders, Work. E. C. Krueger. 2,449,488, Sept. 14.
Riboflavin by fermentation processes, Production of. H. L. Pollard, N. E. Rodgers, and R. E. Meade. 2,449,141, Sept. 14.
Rim and tire separating device, Axially shifting hydraulic. S. H. Garey. 2,449,289, Sept. 14.
Ring: *See*—
Powder box having sealed ring.
Ring spinning frame. H. S. Adams. 2,449,267, Sept. 14.
Roof structure. A. Shaw. 2,449,330, Sept. 14.
Rubber, The production of hard. R. A. Kirby. 2,449,390, Sept. 14.
Rubbery diolefin polymers containing processing aids. W. H. Sharkey. 2,449,418, Sept. 14.
S-(amidomethyl)-dimercaptopropanols. F. K. Signaigo. 2,449,332, Sept. 14.
Safety control system for fuel burners. M. S. Unger. 2,449,185, Sept. 14.
Safety latch. A. Shatkin. 2,449,419, Sept. 14.
Sanding device, Automobile. C. F. Beam. 2,449,525, Sept. 14.
Scaffold pole, Safety. H. H. Clark. 2,449,056, Sept. 14.
Scaffold, Sectional. H. A. Harrison. 2,449,069, Sept. 14.
Schmidt type optical system with opaque diaphragm. P. M. Van Alphen. 2,449,345, Sept. 14.
Scoop, Tractor. F. M. Fraga. 2,449,212, Sept. 14.
Scooter for winter sports. F. Spitzwieser. 2,449,336, Sept. 14.
Scraping implement. D. L. Strubble. 2,449,092, Sept. 14.
Seal, Shaft. F. G. Ferguson and R. C. Thompson. 2,449,375, Sept. 14.

Sealing one end of open ended tube, filling through remaining open end, and sealing remaining open end. C. Herzog. 2,449,478, Sept. 14.
Seat: *See*—
Chair seat.
Child's toilet seat.
Self-opening container. N. B. Wales. 2,449,186, Sept. 14.
Separable connector. J. Rogoff. 2,449,251, Sept. 14.
Separation of monoethanolamine from admixtures by azeotropic distillation with chlorobenzene. J. C. Speck, Jr. 2,449,152, Sept. 14.
Servomotor system, Antihunt electrical. T. R. Harrison. 2,449,476, Sept. 14.
7-amino and 7-hydroxy-1,3,4-triazaindolizines as stabilizers for photographic silver-halide emulsions. N. Heimbach and W. Kelly, Jr. 2,449,225, Sept. 14.
Shaft bearing for microscopes, Adjustable pinion. C. H. O. Wittig. 2,449,156, Sept. 14.
Shifting of lading in freight carriers, Means to prevent. G. H. Liebegott. 2,449,491, Sept. 14.
Shoe assembling and locating attachment. H. Gordon and C. H. Free. 2,449,216, Sept. 14.
Shovel, Power. J. E. Conklin. 2,449,279, Sept. 14.
Shutter. W. A. Pennow and E. W. Yungman. 2,449,503, Sept. 14.
Sifter top, Rotary. T. M. Ekstrom. 2,449,285, Sept. 14.
Ski binding. E. L. Millard. 2,449,242, Sept. 14.
Slide assembly for machine tools. M. J. Schlitters. 2,449,327, Sept. 14.
Snubbed trailing setting switch stand. O. F. Magnus. 2,449,239, Sept. 14.
Soap feeder. G. C. Schmidt. 2,449,513, Sept. 14.
Soldering or welding implement. S. W. Warner. 2,449,521, Sept. 14.
Sole attaching apparatus, Cement. M. Seymour. 2,449,151, Sept. 14.
Solenoid with plunger. O. H. Wisegarver. 2,449,438, Sept. 14.
Sound deadener drawer. G. L. C. Earle. 2,449,207, Sept. 14.
Spark plug electrode. T. G. McDougal. 2,449,403, Sept. 14.
Speed and odometer indicating device. B. Walker. 2,449,155, Sept. 14.
Spice, Preparing synthetic. G. H. Rapaport. 2,449,411. Sept. 14.
Spinning machine. E. Weiss. 2,449,431, Sept. 14.
Spray booth. A. R. Clark and R. J. Kittle. 2,449,203, Sept. 14.
Stadium folding chair. G. P. Wilson. 2,449,523, Sept. 14.
Stand: *See*—
Gold bag stand.
Snubbed trailing setting switch stand.
Strap, Hand. E. C. Mersereau. 2,449,307, Sept. 14.
Stretching machine for uncoiling, flattening, and coiling metal strip. A. Pope. 2,449,507, Sept. 14.
Submersible seismometer system. R. A. Peterson. 2,449,085, Sept. 14.
Sugarcane wax, Making refined. C. B. Broeg and R. T. Balch. 2,449,107, Sept. 14.
Sulfur trioxide, The production of. A. Belchetz. 2,449,190, Sept. 14.
Superheat control for refrigerating apparatus. C. E. Winchester and H. F. Lathrop. 2,449,437, Sept. 14.
Support: *See*—
Adjustable support.
Clothesline support.
Churn support.
Support for bed lamps. C. L. Strauss. 2,449,426, Sept. 14.
Switch: *See*—
Electromagnetically controlled switch.
Telltale control switch.
Quick action switch.
Tilt-actuated switch.
Switch lever stop. H. E. Blair. 2,449,363, Sept. 14.
Synergistic insecticidal compositions. E. R. McGovran, E. L. Mayer, and F. B. Talley. 2,449,533, Sept. 14.
Synthesis of organic oxygen-containing compounds. W. F. Gresham and R. E. Brooks. 2,449,470, Sept. 14.
System for dispensing a liquefied gas. O. A. Hansen. 2,449,378, Sept. 14.
Tank: *See*—
Film tank.
Tape reel housing construction, Measuring. F. J. Mortimer. 2,449,406, Sept. 14.
Telltale control switch. R. R. Fredrick. 2,449,213, Sept. 14.
Temperature compensated magnetron. P. L. Spencer. 2,449,090, Sept. 14.
Thermostatically controlled mixing valve. F. L. Watrous and G. E. Manis. 2,449,261, Sept. 14.
Thioindoxyl couplers for color photography. F. W. H. Mueller and A. Bavley. 2,449,244, Sept. 14.
3,5-diamino-4-hydro-thiotriazine-1-dioxide resins. H. A. Walter. 2,449,520, Sept. 14.
Tilt-actuated switch. L. K. Perry. 2,449,177, Sept. 14.
Tire curing bag. D. R. Elliott and K. K. Madison. 2,449,461, Sept. 14.
Toilet, Trailer. A. G. Agra. 2,449,442, Sept. 14.
Tool: *See*—
Rail tool.
Tool adapter, Machine. E. A. Dorman. 2,449,284, Sept. 14.
Toolholder. L. B. Brown. 2,449,368, Sept. 14.
Toolholder, Quick lock. C. A. Cherry. 2,449,277, Sept. 14.
Tooth, Artificial. A. H. White. 2,449,522, Sept. 14.
Toy. J. Hatchett. 2,449,116, Sept. 14.
Toy. L. W. Samuels. 2,449,147, Sept. 14.
Toy cannon. J. C. Wheeler. 2,449,432, Sept. 14.
Track for vehicles. C. O. Slemmons and R. W. Smith. 2,449,421, Sept. 14.
Traction and control system, Generating electric. T. O. Liliquist. 2,449,399, Sept. 14.
Tractor cultivator. T. Brown. 2,449,159, Sept. 14.
Transformer system, Tapped. A. Boyajian. 2,449,367, Sept. 14.
Transmission for vending machines and the like, Safety. O. Altman. 2,449,043, Sept. 14.
Tricycle. L. W. Sly. 2,449,254, Sept. 14.
Trimming machine. H. R. Abbrecht. 2,449,042, Sept. 14.
Truck, Snubbed. L. A. Lehrman. 2,449,305, Sept. 14.
Tube calibration, Cathode ray. J. Weingarten. 2,449,093, Sept. 14.
Tube: *See*—
Cathode-ray tube.
Milk delivery tube.
External anode power amplifier and oscillator tube.
Tube holder. A. B. Benziger. 2,449,197, Sept. 14.
Tubular structures, Forming. A. J. Paucek. 2,449,247, Sept. 14.
Tufting machine. W. Hofmann. 2,449,529, Sept. 14.
Tuning control, Step-by-step automatic. G. L. Sansbury. 2,449,178, Sept. 14.
Tuning device ratchet. R. W. May. 2,449,079, Sept. 14.
Tuning indicator for indicating resonance of an electric circuit. G. Rathenau, A. A. Kruithof, and J. A. Hartveld. 2,449,412, Sept. 14.
2-[vinyl-dicarboxylic acid ester]-3-amino-1,2,4-triazoles as stabilizers for photographic silver-halide emulsions. N. Heimbach and W. Kelly, Jr. 2,449,226, Sept. 14.
Vacuum cleaner bag. A. and E. W. Beager. 2,449,102, Sept. 14.
Vacuum in photoelectric tubes, Attaining. R. L. Longini. 2,449,493, Sept. 14.
Vacuum sealing flexible packages. S. H. Berch. 2,449,272, Sept. 14.
Valve: *See*—
Automatic water valve.
Quick acting valve.
Microwave-acoustic light valve.
Thermostatically controlled mixing valve.
Valve. G. H. Hufferd and G. O. R. Lindgren. 2,449,481, Sept. 14.
Valve. J. A. Rosmait. 2,449,145, Sept. 14.
Valve arrangement for external-combustion engines. D. M. Weigel. 2,449,262, Sept. 14.
Valve cage. C. E. Bridwell. 2,449,106, Sept. 14.
Vanillin, Isolating. A. Blankart. 2,449,364, Sept. 14.
Vegetable slicer, Manually operated. C. H. Dickman. 2,449,282, Sept. 14.
Vehicle: *See*—
Foot propelled vehicle.
Land and water vehicle.
Vehicle, adapted for fire suppression, Land. P. H. Murphy. 2,449,311, Sept. 14.
Vehicle mounted front end loader. J. B. Castle. 2,449,160, Sept. 14.
Ventilating and flushing apparatus for water closets. C. J. Majauskas. 2,449,134, Sept. 14.
Vibrator apparatus, Voltage multiplying. J. R. Gelzer. 2,449,214, Sept. 14.
Visor. C. W. G. Laing. 2,449,303, Sept. 14.
Vitamin B-complex concentrate. F. W. Tanner, Jr., and J. M. Van Lanen. 2,449,340, Sept. 14.
Vitamin concentrate, Preparing a. N. E. Rodgers, H. L. Pollard, and R. E. Meade. 2,449,144, Sept. 14.
Wattmeter circuit. E. W. Houghton. 2,449,072, Sept. 14.
Wavemeter, Dielectrically tuned. C. G. Sontheimer. 2,449,182, Sept. 14.
Wearing apparel having permanent creases therein. H. Meyer. 2,449,534, Sept. 14.
Wheel dressing machine, Compensating abrasive. G. F. Eglinton and D. J. Woodworth. 2,449,372, Sept. 14.
Whey, Fermenting. E. R. Engle. 2,449,064, Sept. 14.
Windshield wiper. L. Zaiger. 2,449,357, Sept. 14.
Winder apparatus. J. R. Knoble. 2,449,234, Sept. 14.
Winder, Automatic. W. Schweiter. 2,449,328, Sept. 14.
Window construction. R. T. Axe. 2,449,361, Sept. 14.
Window, Ventilating. W. Kiesewetter. 2,449,389, Sept. 14.
Window, Storm. F. J. Wilkinson. 2,449,264, Sept. 14.
Work gloves. R. Steinberg. 2,449,337, Sept. 14.
Work-holding device. H. A. Sneckner. 2,449,255, Sept. 14.
Wrecking crane, Auto. C. N. Ryan. 2,449,146, Sept. 14.
Wrist-attached article carrier. C. C. Robinson. 2,449,324, Sept. 14.
Yarn take-up. J. S. Bradley and N. H. Smith. 2,449,105, Sept. 14.
Yield of riboflavin in fermentation processes, Improving the. H. L. Pollard, N. E. Rodgers, and R. E. Meade. 2,449,142, Sept. 14.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 14, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

U. S. GOVERNMENT PRINTING OFFICE: 1948

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE GOLDBERG

No. 5460. Decided June 1, 1948

[168 F.2d 527; 78 USPQ 69]

1. PATENTABILITY—INVENTION—SUBSTITUTION OF PNEUMATIC MOTOR FOR ELECTRIC MOTOR NOT.
When the only feature of an appealed claim which differentiates it from the disclosure of the S patent is the use of a pneumatic motor for the electric motor of S, and where the patent to J clearly discloses a pneumatic motor designed to operate in the same manner as the motor in the involved application, *Held* that it would be obvious to one skilled in the art to substitute the pneumatic motor of the J device for the S motor to move the tool of the S device.

2. APPEAL TO COURT—MATTERS NOT RAISED BELOW—NO ERROR.
Where appellant contends in his brief that the reference device does not show certain elements set forth in an appealed claim, but we find nothing in the record that such matter was called to the attention of the Board of Appeals, and there is no specific assignment of error with respect thereto, *Held* that as it was not called to the attention of the Board, there was no error in failing to consider it.

3. PATENTABILITY — INVENTION — ADDITION OF PEDAL SWITCH NOT.
Where the basic reference relied upon discloses every element of an appealed claim except the foot pedal switch, and where the M patent discloses a foot pedal switch designed to control the apparatus through electrical circuits, *Held* that it would not involve invention to add to the machine of the basic reference the foot pedal switch of the M device.

4. SAME—SAME—SAME—JUDICIAL NOTICE.
Held that it is common knowledge of which we may take judicial notice that for many years past foot operated electrical switches have been used on automobiles, switching the headlights from a low to a high beam and back again. The foot operated electrical switch to close the circuit of an electrical starting motor in an automobile is also well and commonly known.

5. PATENTABILITY — INVENTION — ASSEMBLING SEVERAL CONTROLS NOT.
Held that the assembling of several controls, each of which separably is known to be old in the prior art, with a switch for manual operation connecting any one of them into the machine, does not involve invention.

6. SAME—SAME—HOLDING CIRCUIT NOT.
Held that we agree with the Board in its holding that "no invention is involved in applying a holding circuit to any electric control circuit."

7. SAME—SAME—ADJUSTING LENGTH OF STROKE NOT.
Where the appealed claim recites means for adjusting the length of the stroke and the reference patent discloses a stop, *Held*, even if the showing of a stop does not imply adjustment, that invention would not be involved in merely making such element adjustable.

8. SAME—SAME—MACHINE TOOL CONTROL.
Certain claims to a machine tool control *Held* properly rejected as unpatentable over the prior art.

APPEAL to the Patent Office. Serial No. 448,554.

AFFIRMED.

Smith, Olsen & Baird (*Glen E. Smith* and *Stephen W. Blore* of counsel) for Goldberg.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner rejecting claims 5 to 7 inclusive, 20, 21, 24 to 34 inclusive, 38 to 40 inclusive, 50, and 51 for want of patentability over the prior art as follows: Anderson, 1,069,995, August 12, 1913; Balcker, 1,401,388, December 27, 1921; Leland, 1,979,479, November 6, 1934; Morgan, 2,017,865, October 22, 1935; Johnson, 2,111,784, March 22, 1938; Kingsbury, 2,114,389, April 19, 1938; Johnson, 2,133,170, October 11, 1938; Schwartz, 2,271,717, February 3, 1942.

Six claims were allowed.

The invention is succinctly described by the Primary Examiner as follows:

> The alleged invention relates to the control of a machine tool, shown specifically as a drilling machine, and comprises a double acting air operated piston for moving a rotating tool axially to and from the work piece. Solenoids actuate the valves for controlling the feed motor. The solenoids may be activated by starting switches which, in turn, are controlled by the proper positioning of a work piece in its holder, or, optionally, by a foot treadle. A holding or shunt circuit is provided in conjunction with each starting switch. The machine may also include means operated by compressed air for gripping and holding the work piece during the working stroke of the tool, and for ejecting it when the work has been completed. Provision is also made for continuous automatic operation.

The patent to Anderson relates to a drilling machine. It discloses a machine on a travelling carriage. The carriage travels along rails and the machine is utilized for drilling spaced holes in a long work piece. The machine includes a movable mounted drill driven by a motor, and is designed to move in a horizontal direction. Means are provided for axial movement of the tool through forward and reverse strokes. The forward stroke is made by means of compressed air admitted into a cylinder. The compressed air acts upon a piston in the cylinder, thus pushing the tool through the forward stroke. The effect of the compressed air, while it effects the forward stroke, compresses a spring designed to move the tool axially through the

Vol. 614 • No. 2 Tuesday, September 14, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

reverse stroke when the force of the compressed air ceases.

The patent to Balcker relates to a multiple drill press controlling means of the pneumatic type. The device of the patent contains a double acting air piston for moving the tool under the control of a treadle. A stop device mounted on a suitable support is provided to render the mechanical feeding inactive.

The patent to Leland relates to a tool controlling device and discloses a plunger motivated by a spring for the operation of a switch.

The patent to Morgan relates to machine tools and in particular to the control of power driven mechanism designed to move work piece and tool toward each other in order to place them into operative association. The device includes a foot pedal designed to raise the platen by depression of the pedal. A foot pedal switch is designed to control the apparatus through electrical circuits.

The patent to Johnson, 2,111,784, concerns a honing machine in which one or more rapidly rotating honing tools are reciprocated by hydraulic means. The machine discloses a switch so that the machine may be caused to operate automatically, independent of other controls, when so desired by the operator.

The patent to Kingsbury relates to a machine tool structure having feeding apparatus for reciprocating the tool. It is said to be particularly concerned with drilling and like operations by combined reciprocating and rotating motion of the tool holder relative to the work. A holding circuit is disclosed in connection with the tool advancing mechanism, and it is further shown that, at the end of the stroke, the maintaining circuit is interrupted.

The patent to Johnson, 2,133,170 relates to a tilting mechanism for concrete mixers of the tilting type. The device described discloses a cylinder with low pressure air maintained constantly in the upper end thereof, and high pressure air intermittently supplied to the lower end of the cylinder for the purpose of moving the piston within the cylinder against the resistance of the lower pressure air for the forward or discharge stroke of the mechanism. When the high pressure air is released, the low pressure air moves the piston to its original position. The function of the cylinder is for tilting a concrete mixer from a charging to a discharging position.

The patent to Schwartz relates to a countersinking and blind drilling machine. It discloses an apparatus for drilling a work piece placed on a support plate. A rotatable drill is shown actuated by an electric motor. The drill moves axially in forward and reverse strokes and is motivated by means of a lever, cylinder, and spring. It appears that when the work piece is placed on the support it depresses projecting pins which close a switch in control of a solenoid. The action of the solenoid is to release air from the cylinder whereupon the piston in the cylinder is returned to its uppermost position by the expansion of the spring. Such spring action turns the lever clockwise so that other springs are affected to move the drill to and through the work. It appears that the means by which the tool of the patent is moved axially in forward and reverse stroke is "compressed air operated" for the reason that the return stroke is caused by the admission of compressed air into the cylinder.

Claims 5, 6, 7, 20, 21, and 24 were all rejected upon the Schwartz and Kingsbury references. Of that group, claim 5 is illustrative and reads as follows:

5. The combination in a machine of the class described of a movably mounted tool, means for moving said tool axially through forward and reversed strokes, means including an electric circuit for controlling said forward and reverse strokes, means for supporting a work piece in position to be engaged by said tool, means actuated by the movement of a work piece to said position for establishing a temporary condition in said circuit which initiates said forward stroke, and means actuated during the initial portion of said forward stroke for establishing another circuit condition which causes the forward stroke to be continued.

Claim 6 is similar to claim 5 except for the addition "when said forward stroke has continued to a predetermined extent for actuating said circuit to effect said reverse stroke." Claim 7 adds to claim 6 "means for automatically arresting said reverse stroke when said tool has been returned to its normal position." Claims 20, 21, and 24 are similar to claim 5 except that they include "compressed air operated means" for moving the tool through forward and reverse strokes. Claim 20 adds more specifically a description of the holder for the work piece, than does claim 5, and claim 21 adds to claim 20 means for arresting the forward stroke after a predetermined movement and causing the air operated means to effect a reverse stroke. Claim 24 differs from claim 5 in the recitation of a solenoid in the circuit to control forward and reverse strokes in addition to a manually operated switch designed to initiate the forward stroke. It also shows switches actuated by tool movement for controlling the continuance and stopping of the forward stroke.

Claims 25, 26, and 27 form another group of which claim 25 is illustrative, reading as follows:

25. The combination in a machine of the class described of a tool holder, means adapted to be operated by compressed air for moving said tool holder axially of said tool, means for supplying low pressure air continually to said first-named means for retracting said tool holder and normally holding it in its retracted position, means for supplying air at a higher pressure to said first-named means for moving said tool holder through a working stroke against the pressure of said low pressure air, means including an electric circuit for controlling said compressed air supplies, and manually operated means for actuating said circuit to initiate said working stroke.

The Board reversed the reason for the Examiner's rejection of claim 25, but under rule 139 of the Rules of Practice, U. S. Patent Office, gave a new ground of rejection for that claim on the Schwartz patent in view of the Johnson patent, 2,133,170. The Board affirmed the Examiner's rejection of claims 26 and 27 on those references.

Claim 26 differs from claim 25 only with respect to the last clause of claim 25. The last two clauses of claim 26 are directed to "a fixture for holding a work piece in position to be engaged by said tool, and a switch actuated by the movement of a work piece to said position for actuating said circuit to start said working stroke." Claim 27 adds to claim 26 switches which are actuated in response to the movement of the tool holder for actuating the control circuit to complete and then arrest the working stroke, and then cause said tool holder to be retracted.

Of the group of claims 28 and 29, claim 28 is illustrative and reads as follows:

28. The combination in a machine of the class described, of a movable mounted tool, compressed air operated means for effecting forward and reverse strokes of said tool, means including an electric circuit and solenoid-operated valves connected in said circuit for controlling said compressed air operated means, a switch connected in said circuit and adapted to be actuated by a work piece when placed in the path of said tool for actuating said circuit to start said forward stroke, a foot pedal switch connected in said circuit and adapted to be operated to actuate said circuit to start said forward stroke, and means for altering said circuit to render either of said switches operative at the will of the operator.

That claim was rejected on the Schwartz patent with the patent to Morgan. Claim 29 was rejected upon those references with a further citation of the Johnson patent, 2,111,784.

Claim 29 is similar to claim 28 except that it adds "said last-named means being capable of operation to render both of said switches inoperative and to cause said compressed air operated means to effect a continuous series of forward and reverse strokes of said tool."

Claims 30 to 34 inclusive and 38 to 40 inclusive were rejected on either of the patents to Anderson or Balcker in view of the Johnson patent, 2,133,170. Claim 30 is illustrative of that group and reads as follows:
